Security Valuation

Portfolio securities are valued by various methods depending on the primary market or exchange on which they trade. Most equity securities for which the primary market is the United States are valued at the official closing price, last sale price or, if no sale has occurred, at the closing bid price. Most equity securities for which the primary market is outside the United States are valued using the official closing price or the last sale price in the principal market in which they are traded. If the last sale price on the local exchange is unavailable, the last evaluated quote or closing bid price normally is used. Debt obligations with remaining maturities of 60 days or less are valued at cost adjusted for amortization of premiums and accretion of discounts. Certain of the securities in which the Fund may invest are priced through pricing services that may utilize a matrix pricing system which takes into consideration factors such as yields, prices, maturities, call features, and ratings on comparable securities. Bonds may be valued according to prices quoted by a bond dealer that offers pricing services. Open end investment companies are valued at their net asset value. Securities for which quotations are not readily available or reliable and other assets may be valued as determined in good faith by the Fund's Investment Manager under the direction of or pursuant to procedures established by the Fund's Board of Trustees, called fair value pricing. Due to the inherent uncertainty of valuation, these values may differ from the value that would have been used had a readily available market for the securities existed. These differences in valuation could be material. A security's valuation may differ depending on the method used for determining value. The use of fair value pricing by the Fund may cause the net asset value of its shares to differ from the net asset value that would be calculated using market prices.

Value Measurements

Inputs to valuation methods are prioritized by a three level hierarchy as follows:

- Level 1 unadjusted quoted prices in active markets for identical assets or liabilities including securities actively traded on a securities exchange.
- Level 2 observable inputs other than quoted prices included in level 1 that are observable for the asset or liability which may include quoted prices for similar instruments, interest rates, prepayment speeds, credit risk, yield curves, default rates, and similar data.
- Level 3 unobservable inputs for the asset or liability including the Fund's own assumptions about the assumptions a market participant would use in valuing the asset or liability.

The availability of observable inputs can vary from security to security and is affected by a wide variety of factors, including, for example the type of security, whether the security is new and not yet established in the marketplace, the liquidity of markets, and other characteristics particular to the security. To the extent that valuation is based on models or inputs that are less observable or unobservable in the market, the determination of fair value requires more judgment. Accordingly, the degree of judgment exercised in determining fair value is greatest for investments categorized in level 3.

The inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, the level in the fair value hierarchy within which the fair value measurement falls in its entirety is determined based on the lowest level input that is significant to the fair value measurement in its entirety.

The inputs or methodology used for valuing investments are not an indication of the risk associated with investing in those securities.

A description of the valuation techniques applied to the Fund's major categories of assets and liabilities measured at fair value on a recurring basis follows:

Equity securities (common and preferred stock) – Equity securities traded on a national securities exchange or market are stated at the official closing price, last sale price or, if no sale has occurred, at the most recent last sale or closing bid price on the day of valuation. To the extent these securities are actively traded and valuation adjustments are not applied, they may be categorized in level 1 of the fair value hierarchy. Preferred stock and other equities on inactive markets or valued by reference to similar instruments may be categorized in level 2.

Corporate bonds and notes - The fair value of corporate bonds and notes are estimated using various techniques which may consider, among other things, recently executed transactions in securities of the issuer or comparable issuers, market price quotations (where observable), bond spreads, and fundamental data relating to the issuer. Although most corporate bonds and notes may be categorized in level 2 of the fair value hierarchy, in instances where lower relative weight is place on transaction prices, quotations, or similar observable inputs, they may be categorized in level 3.

Restricted and/or illiquid securities. Restricted and/or illiquid securities for which quotations are not readily available or reliable may be valued as determined in good faith by the Investment Manager under the direction of or pursuant to procedures established by the Fund's Board of Trustees. Restricted securities issued by publicly traded companies are generally valued at a discount to similar publicly traded securities. Restricted or illiquid securities issued by nonpublic entities may be valued by reference to comparable public entities or fundamental data relating to the issuer or both or similar inputs. Depending on the relative significance of valuation inputs, these instruments may be classified in either level 2 or level 3 of the fair value hierarchy.

Derivative instruments – Exchange traded derivatives, such as equity option contracts, may be valued based on quoted prices from the exchange and are categorized in level 1 of the fair value hierarchy.

The following is a summary of the inputs used as of September 30, 2012 in valuing the Fund's assets carried at fair value. Refer to the Schedule of Portfolio Investments for detailed information on specific investments.

- (a) Transferred from level 2 to level 3 because of lack of observable market data due to an exchange of debt securities for illiquid common units.
- (b) Transfers in and transfers out are recognized on the actual date of the event or change that caused the transfer.

The Investment Manager under the direction of the Fund's Board of Trustees considers various valuation approaches for valuing securities categorized within level 3 of the fair value hierarchy. The factors used in determining the value of the Fund's private investments may include, but are not limited to, the discounts applied to the selection of comparable investments due to the private nature of the investment; the type of the security; the size of the holding; the initial cost of the security; the existence of any contractual restrictions on the security's disposition; the price and extent of public trading in similar securities of the issuer or of comparable companies; quotations or evaluated prices from broker-dealers and/or pricing services; information obtained from the issuer or analysts; an analysis of the company's or issuer's financial statements; an evaluation of the forces that influence the issuer and the market in which the security is purchased and sold. Significant changes in any of those inputs in isolation would result in a significantly lower or higher fair value measurement. The pricing of all fair value holdings is subsequently reported to the Fund's Board of Trustees.

The following table presents additional information about valuation methodologies and inputs used for investments that are measured at fair value and categorized with level 3 as of September 30, 2012:

Cost for Federal Income Tax Purposes

At September 30, 2012, for federal income tax purposes the aggregate cost of securities was \$102,039,578 and net unrealized appreciation was \$14,685,106, comprised of gross unrealized appreciation of \$20,365,915 and gross unrealized depreciation of \$5,680,809.

Illiquid and Restricted Securities

The Fund owns securities which have a limited trading market and/or certain restrictions on trading and, therefore, may be illiquid and/or restricted. Such securities have been valued using fair value pricing. Due to the inherent uncertainty of valuation, these values may differ from the values that would have been used had a readily available market for the securities existed. These differences in valuation could be material. Illiquid and/or restricted securities owned at September 30, 2012, were as follows:
