PRICING SUPPLEMENT

Filed Pursuant to Rule 424(b)(2)

Registration Statement No. 333-208507

Dated February 10, 2017

Royal Bank of Canada Trigger Callable Yield Notes

\$13,565,000 Notes Linked to the Least Performing Underlying of the S&P 500[®] Index, the EURO STOXX 50[®] Index and the Russell 2000[®] Index due on August 19, 2019

Investment Description

Trigger Callable Yield Notes (the “Notes”) are unsecured and unsubordinated debt securities issued by Royal Bank of Canada linked to the performance of the least performing underlying of the S&P 500[®] Index, the EURO STOXX 50[®] Index, and the Russell 2000[®] Index (each an “underlying index” and together the “underlying indices”). We will make quarterly coupon payments on the Notes at the annual rate of 5.00%. We may, at our election, call the Notes early on or prior to any Optional Call Notice Date. If we do not elect to call the Notes prior to maturity and the ending levels of each of the underlying indices are equal to or greater than their respective downside threshold, we will make a cash payment at maturity equal to the principal amount of your Notes, in addition to the applicable quarterly coupon payment. If we do not elect to call the Notes prior to maturity and the closing level of any of the underlying indices is less than its downside threshold, we will pay you less than the full principal amount, if anything, at maturity, resulting in a loss of your principal amount that is proportionate to the decline in the closing level of the underlying index with the largest percentage decrease between its initial level and final level (the “least performing underlying index”). Investing in the Notes involves significant risks. You may lose some or all of your principal amount at maturity. You will be exposed to the market risk of each underlying index on the final valuation date and any decline in the level of one underlying index may negatively affect your return and will not be offset or mitigated by a lesser decline or any potential increase in the level of the other underlying indices. Generally, a higher coupon rate is associated with a greater risk of loss. The contingent repayment of principal applies only if you hold the Notes to maturity. All payments on the Notes, including any repayment of principal, are subject to our creditworthiness. If we were to default on our payment obligations, you may not receive any amounts owed to you under the Notes and you could lose your entire investment. The Notes will not be listed on any securities exchange.

Non-U.S. holders will not be subject to withholding on dividend equivalent payments under Section 871(m) of the U.S. Internal Revenue Code. Please see the section below, “U.S. Federal Income Tax Consequences,” which applies to the Notes.

Features Key Dates

Quarterly Coupons — Regardless of the performance of any Index, we will pay you a quarterly coupon Payment unless the Notes have been previously called. In exchange for the opportunity to receive the quarterly coupon payments, you are accepting the risk of losing some or all of your principal amount and our credit risk for all payments under the Notes.

Issuer Callable — We may, at our election, call the Notes on each Coupon Payment Date, and pay you the principal amount plus the applicable quarterly coupon payment. If the Notes are called, no further payments will be made after the Call Settlement Date.

Contingent Repayment of Principal at Maturity— If by maturity the Notes have not been called and each underlying index closes at or above its downside threshold on the final valuation date, we will pay you the principal amount per Note at maturity, in addition to the final coupon payment. If any underlying index closes below its downside threshold on the final valuation date, we will repay less than the principal amount, if anything, at maturity, resulting in a loss on your principal amount that is proportionate to the decline in the closing level of the least performing underlying index from its initial level to its final level. The contingent repayment of principal applies only if you hold the Notes until maturity. All payments on the Notes, including any repayment of principal, is subject to our creditworthiness.

Trade Date February 10, 2017

Settlement Date February 17, 2017
 Coupon Payments Quarterly (see page 4)
 Final Valuation Date¹ August 12, 2019
 Maturity Date¹ August 19, 2019

¹ Subject to postponement if a market disruption event occurs as described under “General Terms of the Notes — Payment at Maturity” below.

NOTICE TO INVESTORS: THE NOTES ARE SIGNIFICANTLY RISKIER THAN CONVENTIONAL DEBT INSTRUMENTS. WE ARE NOT NECESSARILY OBLIGATED TO REPAY THE FULL PRINCIPAL AMOUNT OF THE NOTES AT MATURITY, AND THE NOTES CAN HAVE DOWNSIDE MARKET RISK SIMILAR TO THE LEAST PERFORMING UNDERLYING INDEX. THIS MARKET RISK IS IN ADDITION TO THE CREDIT RISK INHERENT IN PURCHASING A DEBT OBLIGATION OF ROYAL BANK OF CANADA. YOU SHOULD NOT PURCHASE THE NOTES IF YOU DO NOT UNDERSTAND OR ARE NOT COMFORTABLE WITH THE SIGNIFICANT RISKS INVOLVED IN INVESTING IN THE NOTES.

YOU SHOULD CAREFULLY CONSIDER THE RISKS DESCRIBED UNDER “KEY RISKS” BEGINNING ON PAGE 5 OF THIS PRICING SUPPLEMENT AND UNDER “RISK FACTORS” BEGINNING ON PAGE S-1 OF THE PROSPECTUS SUPPLEMENT BEFORE PURCHASING ANY NOTES. EVENTS RELATING TO ANY OF THOSE RISKS, OR OTHER RISKS AND UNCERTAINTIES, COULD ADVERSELY AFFECT THE MARKET VALUE OF, AND THE RETURN ON, YOUR NOTES. YOU MAY LOSE SOME OR ALL OF THE PRINCIPAL AMOUNT OF THE NOTES.

Note Offering

This pricing supplement relates to Trigger Callable Yield Notes we are offering. The Notes are linked to the least performing underlying between the S&P 500[®] Index, the EURO STOXX 50[®] Index and the Russell 2000[®] Index. The Notes are offered at a minimum investment of 100 Notes at \$10.00 per Note (representing a \$1,000 investment), and integral multiples of \$10.00 in excess thereof.

Underlying Indices	Tickers	Coupon Rate	Initial Levels	Downside Threshold	CUSIP	ISIN
S&P 500 [®] Index (SPX)	SPX		2,316.10	1,273.86, which is 55% of the Initial Level*		
EURO STOXX 50 [®] Index (SX5E)	SX5E	5.00% per annum	3,270.83	1,798.96, which is 55% of the Initial Level*	78014E349	US78014E3493
Russell 2000 [®] Index (RTY)	RTY		1,388.844	763.864, which is 55% of the Initial Level*		

*Rounded to two decimal places in the case of the SPX and SX5E and three decimal places in the case of the RTY. See “Additional Information About Royal Bank of Canada and the Notes” in this pricing supplement. The Notes will have the terms specified in the prospectus dated January 8, 2016, the prospectus supplement dated January 8, 2016 and this pricing supplement.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of the Notes or passed upon the accuracy or the adequacy of this pricing supplement or the accompanying prospectus and prospectus supplement. Any representation to the contrary is a criminal offense.

Offering of the Notes	Price to Public		Fees and Commissions ⁽¹⁾		Proceeds to Us	
	Total	Per Note	Total	Per Note	Total	Per Note

Notes linked to the Least Performing Underlying of the S&P 500 [®] Index, the EURO STOXX 50 [®] Index and the Russell 2000 [®] Index	\$13,565,000	\$10.00	\$203,475	\$0.15	\$13,361,525	\$9.85
---	--------------	---------	-----------	--------	--------------	--------

⁽¹⁾ UBS Financial Services Inc., which we refer to as UBS, will receive a commission of \$0.15 per \$10 principal amount of the Notes. See “Supplemental Plan of Distribution (Conflicts of Interest)” on page 29 of this pricing supplement.

The initial estimated value of the Notes as of the date of this document is \$9.6657 per \$10 in principal amount, which is less than the price to public. The actual value of the Notes at any time will reflect many factors, cannot be predicted with accuracy, and may be less than this amount. We describe our determination of the initial estimated value under “Key Risks” beginning on page 5, “Supplemental Plan of Distribution (Conflicts of Interest)” on page 29 and “Structuring the Notes” on page 29 of this pricing supplement.

The Notes will not constitute deposits insured under the Canada Deposit Insurance Corporation Act or by the United States Federal Deposit Insurance Corporation or any other Canadian or United States government agency or instrumentality.

UBS Financial Services Inc. RBC Capital Markets, LLC

Additional Information About Royal Bank of Canada and the Notes

You should read this pricing supplement together with the prospectus dated January 8, 2016, as supplemented by the prospectus supplement dated January 8, 2016, relating to our senior global medium-term notes, Series G, of which these Notes are a part. This pricing supplement, together with the documents listed below, contains the terms of the Notes and supersedes all other prior or contemporaneous oral statements as well as any other written materials including preliminary or indicative pricing terms, correspondence, trade ideas, structures for implementation, sample structures, fact sheets, brochures or other educational materials of ours. You should carefully consider, among other things, the matters set forth in “Key Risks” below, as the Notes involve risks not associated with conventional debt securities.

If the terms of the prospectus and prospectus supplement are inconsistent with the terms discussed herein, the terms discussed in this pricing supplement will control.

You may access these on the SEC website at www.sec.gov as follows (or if such address has changed, by reviewing our filing for the relevant date on the SEC website):

“Prospectus supplement dated January 8, 2016:

<http://www.sec.gov/Archives/edgar/data/1000275/000121465916008811/p14150424b3.htm>

“Prospectus dated January 8, 2016:

<http://www.sec.gov/Archives/edgar/data/1000275/000121465916008810/j18160424b3.htm>

As used in this pricing supplement, “we,” “us” or “our” refers to Royal Bank of Canada.

Investor Suitability

The Notes may be suitable for you if, among other considerations:

.. You fully understand the risks inherent in an investment in the Notes, including the risk of loss of your entire initial investment.

.. You can tolerate a loss of all or a substantial portion of your investment and are willing to make an investment that may have the same downside market risk as an investment in the securities composing the least performing underlying index.

.. You are willing to make an investment whose return is limited to the applicable coupon payments, regardless of any potential appreciation of the underlying indices, which could be significant.

.. You are willing to forgo the dividends paid on the equity securities composing the underlying indices.

.. You can tolerate fluctuations in the price of the Notes prior to maturity that may be similar to or exceed the downside fluctuations of the underlying indices.

.. You are willing to invest in Notes for which there may be little or no secondary market and you accept that the secondary market will depend in large part on the price, if any, at which RBC Capital Markets, LLC, which we refer to as "RBCCM," is willing to purchase the Notes.

.. You are willing to invest in the Notes based on the coupon rate set forth on the cover page.

.. You are willing to accept individual exposure to each underlying index on the final valuation date and understand that the performance of the least performing underlying index will not be offset or mitigated by the performance of the other underlying indices.

.. You understand and accept the risks and characteristics associated with the underlying indices.

.. You are willing to invest in securities that may be called early at our election and you are otherwise willing to hold such securities to maturity.

.. You are willing to assume our credit risk for all payments under the Notes, and understand that if we default on our obligations, you may not receive any amounts due to you, including any repayment of principal.

The Notes may not be suitable for you if, among other considerations:

.. You do not fully understand the risks inherent in an investment in the Notes, including the risk of loss of your entire initial investment.

.. You cannot tolerate a loss on your investment and require an investment designed to provide a full return of principal at maturity.

.. You are not willing to make an investment that may have the same downside market risk as an investment in the equity securities composing the least performing underlying index.

.. You believe that the levels of any underlying index will decline during the term of the Notes and is likely to close below its downside threshold on the final valuation date.

.. You seek an investment that participates in the full appreciation in the levels of the underlying indices or that has unlimited return potential.

.. You cannot tolerate fluctuations in the price of the Notes prior to maturity that may be similar to or exceed the downside fluctuations of the least performing underlying index.

.. You are unwilling to invest in the Notes based on the coupon rate set forth on the cover page.

.. You are unwilling to accept individual exposure to each underlying index on the final valuation date or do not understand that the performance of the least performing underlying index will not be offset or mitigated by the performance of the other underlying indices.

.. You prefer to receive the dividends paid on the securities composing the underlying indices.

.. You do not understand or accept the risks or characteristics associated with the underlying indices.

.. You are unable or unwilling to hold securities that may be called early at our election, or you are otherwise unable or unwilling to hold such securities to maturity, or you seek an investment for which there will be an active secondary market for the Notes.

.. You are not willing to assume our credit risk for all payments under the Notes, including any repayment of principal.

The suitability considerations identified above are not exhaustive. Whether or not the Notes are a suitable investment for you will depend on your individual circumstances, and you should reach an investment decision only after you and your investment, legal, tax, accounting, and other advisers have carefully considered the suitability of an investment in the Notes in light of your particular circumstances. You should also review carefully the “Key Risks” beginning on page 5 of this pricing supplement for risks related to an investment in the Notes. In addition, you should review carefully the section below, “Information About the Underlying Indices,” for more information about these indices.

3

Final Terms of the Notes¹

Issuer:	Royal Bank of Canada
Principal Amount per Note:	\$10.00 per Note (subject to a minimum purchase of 100 Notes (\$1,000))
Term:	Approximately 2.5 years, unless earlier called at our election.
Underlying Indices:	The S&P 500 [®] Index (“SPX”), the EURO STOXX 50 Index (“SX5E”) and the Russell 2000 Index (“RTY”)
Issuer Call Feature:	We may elect to call the Notes on or prior to any quarterly Optional Call Notice Date. If the Notes are called, we will pay you on the following Call Settlement Date a cash payment per Note equal to the principal amount plus the applicable quarterly coupon payment, and no further payments will be made on the Notes. To call the Notes, we will deliver written notice to The Depository Trust Company (“DTC”) on or prior to the Optional Call Notice Date immediately prior to the applicable Call Settlement Date.
Coupon Payments:	The coupon payments will be made in equal quarterly instalments regardless of the performance of the underlying indices, unless the Notes were earlier called.
Coupon Rate:	The coupon rate is 5.00% per annum.
Coupon Payment Dates:	May 17, 2017, August 17, 2017, November 17, 2017, February 20, 2018, May 17, 2018, August 17, 2018, November 19, 2018, February 19, 2019, May 17, 2019 and August 19, 2019.
Optional Call Notice Dates:	May 10, 2017, August 10, 2017, November 10, 2017, February 12, 2018, May 10, 2018, August 10, 2018, November 12, 2018, February 11, 2019, May 10, 2019, and August 12, 2019.
Call Settlement Dates:	The first Coupon Payment Date following our delivery of a call notice to the trustee for the Notes. If we do not elect to call the Notes and the closing levels of each of the underlying indices are equal to or greater than their respective downside thresholds, we will pay you a cash payment per Note on the maturity date equal to \$10.00 plus the applicable quarterly coupon payment.
Payment at Maturity:	If we do not elect to call the Notes and the final level of the least performing underlying index is less than its downside threshold, we, in addition to the final coupon payment, will pay you a cash payment on the maturity date of less than the principal amount, if anything, resulting in a loss on your initial investment that is proportionate to the negative underlying return of the least performing underlying index, equal to: $\$10.00 \times (1 + \text{underlying return of the least performing underlying index})$ per Note
Least Performing Underlying Index:	The underlying index with the largest percentage decrease between its initial level and its final level.
Underlying Return:	$\frac{\text{Final Level} - \text{Initial Level}}{\text{Initial Level}}$
Downside Thresholds:	With respect to each underlying index, 55% of its initial level, as indicated on the cover page.
Initial Levels:	The closing level of each underlying index on the trade date, as indicated on the cover page.
Final Levels:	The closing level of each underlying index on the final valuation date, as determined by the calculation agent.

¹ Terms used in this pricing supplement, but not defined herein, shall have the meanings ascribed to them in the prospectus or the prospectus supplement.

Trade Date: The initial level and downside threshold of each underlying index were determined. The coupon rate was set.

Quarterly (callable at our election): We will pay the applicable quarterly coupon payments. We may, at our election and upon written notice to DTC, call the Notes on or prior to any Optional Call Notice Date. If we elect to call the Notes, we will pay you a cash payment per Note equal to the principal amount plus the applicable quarterly coupon payment and no further payments will be made on the Notes.

Maturity Date: The final level of each underlying index is observed on the final valuation date. If we do not elect to call the Notes, and the final levels of each of the underlying indices are equal to or greater than their respective downside thresholds, we will repay the principal plus the applicable quarterly coupon payment amount equal to \$10.00 per Note. If we do not elect to call the Notes and the ending level of the least performing underlying index is less than its downside threshold, in addition to the final coupon payment, we will repay less than the principal amount, if anything, resulting in a loss on your initial investment proportionate to the decline of the least performing underlying index, for an amount equal to:
 $\$10.00 \times (1 + \text{underlying return of the least performing underlying index})$ per Note

INVESTING IN THE NOTES INVOLVES SIGNIFICANT RISKS. YOU MAY LOSE SOME OR ALL OF YOUR PRINCIPAL AMOUNT. YOU WILL BE EXPOSED TO THE MARKET RISK OF EACH UNDERLYING INDEX ON THE FINAL VALUATION DATE, AND ANY DECLINE IN THE LEVEL OF ONE UNDERLYING INDEX MAY NEGATIVELY AFFECT YOUR RETURN AND WILL NOT BE OFFSET OR MITIGATED BY A LESSER DECLINE OR ANY POTENTIAL INCREASE IN THE LEVEL OF THE OTHER UNDERLYING INDICES. ANY PAYMENT ON THE NOTES, INCLUDING ANY REPAYMENT OF PRINCIPAL, IS SUBJECT TO OUR CREDITWORTHINESS. IF WE WERE TO DEFAULT ON OUR PAYMENT OBLIGATIONS, YOU MAY NOT RECEIVE ANY AMOUNTS OWED TO YOU UNDER THE NOTES AND YOU COULD LOSE YOUR ENTIRE INVESTMENT.

Key Risks

An investment in the Notes is subject to the risks described below, as well as the risks described under “Risk Factors” in the prospectus and the prospectus supplement. The return on the Notes is linked to the performance of the underlying indices. The Notes do not guarantee any return of principal at, or prior to, maturity. Investing in the Notes is not equivalent to investing directly in the securities composing the underlying indices. In addition, your investment in the Notes entails other risks not associated with an investment in conventional debt securities. You should consider carefully the following discussion of risks before you decide that an investment in the Notes is suitable for you.

Risks Relating to the Notes Generally

Your investment in the Notes may result in a loss. The Notes do not guarantee any return of principal. The amount payable to you at maturity, if any, will be determined as described in this pricing supplement. If we do not elect to call the Notes and the closing level of any underlying index has declined below its downside threshold on the final valuation date, you will be fully exposed to any depreciation of the least performing underlying index from its initial level to its final level. In this case, we will repay less than the full principal amount at maturity, resulting in a loss of principal that is proportionate to the negative return of the least performing underlying index. Under these circumstances, you will lose 1% (or a fraction thereof) of the principal amount for every 1% (or a fraction thereof) decrease in the level of the least performing underlying index below its initial level. Accordingly, you may lose the entire principal amount of your Notes.

The Notes are subject to our credit risk. The Notes are subject to our credit risk, and our credit ratings and credit spreads may adversely affect the market value of the Notes. Investors are dependent on our ability to pay all amounts due on the Notes, and therefore investors are subject to our credit risk and to changes in the market’s view of our creditworthiness. Any decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the value of the Notes. If we were to default on our payment obligations, you may not receive any amounts owed to you under the Notes and you could lose your entire investment.

The return on the Notes limited to the sum of any coupons and you will not participate in any appreciation of any underlying index. The return potential of the Notes is limited to the pre-specified coupon rate, regardless of the appreciation of any underlying index, which may be significant. Further, if we elect to call the Notes, you will not receive any coupons or any other payments after the Call Settlement Date. If we do not elect to call the Notes, you may be subject to the risk of decline in the level of each underlying index, even though you are not able to participate in any potential appreciation of any underlying index. As a result, the return on an investment in the Notes could be less than the return on a hypothetical direct investment in the securities represented by any underlying index. In addition, if we do not elect to call the Notes and the final level of any underlying index is below its downside threshold, you will lose some or all of your principal amount and the overall return on the Notes would be less than the amount that would be paid on a conventional debt security of ours of comparable maturity.

If you sell the Notes prior to maturity, you may receive less than the principal amount. If we do not elect to call the Notes, you should be willing to hold the Notes until maturity. If you are able to sell the Notes in the secondary market prior to maturity, you may have to sell them for a loss relative to the principal amount, even if the levels of the underlying indices are above their respective downside thresholds. In addition, you will not receive the benefit of any contingent repayment of principal associated with the downside thresholds if you sell the Notes before the maturity date. The potential returns described in this document assume that the Notes, which are not designed to be short-term trading instruments, are held to maturity.

The Notes may be called early and are subject to reinvestment risk. We may, in our sole discretion, elect to call the Notes on or prior to any Optional Call Notice Date. If we elect to call your Notes early, you will no longer have the opportunity to receive any coupons after the applicable Call Settlement Date. The first Optional Call Notice Date occurs after approximately three months and therefore you may not have the opportunity to receive any coupons after approximately three months. In the event we elect to call the Notes, there is no guarantee that you would be able to reinvest the proceeds at a comparable rate of return for a similar level of risk. To the extent you are able to reinvest such proceeds at an investment comparable to the Notes; you may incur transaction costs such as dealer discounts and hedging costs built into the price of the new securities.

It is more likely that we will elect to call the Notes prior to maturity when the expected interest payable on the Notes is greater than the interest that would be payable on other instruments issued by us of comparable maturity, terms and credit rating trading in the market. We are less likely to call the Notes prior to maturity when the expected interest

payable on the Notes is less than the interest that would be payable on other comparable instruments issued by us. Therefore, the Notes are more likely to remain outstanding when the expected interest payable on the Notes is less than what would be payable on other comparable instruments.

The coupon rate will reflect in part the volatility of the underlying indices and may not be sufficient to compensate you for the risk of loss at maturity. "Volatility" refers to the frequency and magnitude of changes in the levels of the underlying indices. The greater the volatility of the underlying indices, the more likely it is that the level of any underlying index could close below its downside threshold on any trading day during the term of the Notes. This risk will generally be reflected in a higher coupon rate for the Notes than the interest rate payable on our conventional debt securities with a comparable term. In addition, lower correlation between the underlying indices can also indicate a greater likelihood of one underlying index closing below its downside threshold on the final valuation date. This greater risk will also be reflected in a higher coupon rate than on a security linked to underlying indices with a greater degree of correlation. However, while the coupon will be a fixed amount, the underlying indices' volatility and correlation can change significantly over the term of the Notes. The levels of one or any of the underlying indices could fall sharply as of any trading day during the term of the Notes or the final valuation date, which could result in a significant loss of your principal amount.

Your return on the Notes may be lower than the return on a conventional debt security of comparable maturity. The return that you will receive on the Notes, which could be negative, may be less than the return you could earn on other investments. Your investment may not reflect the full opportunity cost to you when you take into account factors that affect the time value of money, such as inflation.

The initial estimated value of the Notes is less than the price to the public. The initial estimated value that is set forth on the cover page of this document, which is less than the public offering price you pay for the Notes, does not represent a minimum price at which we,

RBCCM or any of our other affiliates would be willing to purchase the Notes in any secondary market (if any exists) at any time. If you attempt to sell the Notes prior to maturity, their market value may be lower than the price you paid for them and the initial estimated value. This is due to, among other things, changes in the levels of the underlying indices, the borrowing rate we pay to issue securities of this kind, and the inclusion in the price to the public of the underwriting discount, and our estimated profit and the costs relating to our hedging of the Notes. These factors, together with various credit, market and economic factors over the term of the Notes, are expected to reduce the price at which you may be able to sell the Notes in any secondary market and will affect the value of the Notes in complex and unpredictable ways. Assuming no change in market conditions or any other relevant factors, the price, if any, at which you may be able to sell your Notes prior to maturity may be less than the price to public, as any such sale price would not be expected to include the underwriting discount and our estimated profit and the costs relating to our hedging of the Notes. In addition, any price at which you may sell the Notes is likely to reflect customary bid-ask spreads for similar trades. In addition to bid-ask spreads, the value of the Notes determined for any secondary market price is expected to be based on a secondary market rate rather than the internal borrowing rate used to price the Notes and determine the initial estimated value. As a result, the secondary price will be less than if the internal borrowing rate was used. The Notes are not designed to be short-term trading instruments. Accordingly, you should be able and willing to hold your Notes to maturity.

Our initial estimated value of the Notes is an estimate only, calculated as of the time the terms of the Notes were set. The initial estimated value of the Notes is based on the value of our obligation to make the payments on the Notes, together with the mid-market value of the derivative embedded in the terms of the Notes. See “Structuring the Notes” below. Our estimate is based on a variety of assumptions, including our credit spreads, expectations as to dividends, interest rates and volatility, and the expected term of the Notes. These assumptions are based on certain forecasts about future events, which may prove to be incorrect. Other entities may value the Notes or similar securities at a price that is significantly different than we do.

The value of the Notes at any time after the trade date will vary based on many factors, including changes in market conditions, and cannot be predicted with accuracy. As a result, the actual value you would receive if you sold the Notes in any secondary market, if any, should be expected to differ materially from the initial estimated value of your Notes and the amount that may be paid on the Notes.

Your return on the Notes will not reflect dividends on the equity securities composing the underlying indices. The return on the Notes will not reflect the return you would realize if you actually owned the equity securities composing the underlying indices and received the dividends paid on those equity securities. The final levels of each of the underlying indices and the determination of the amount to be paid at maturity will not take into consideration the value of those dividends.

If the levels of the underlying indices change, the market value of the Notes may not change in the same manner.

Owning the Notes is not the same as owning the securities composing the underlying indices. Accordingly, changes in the levels of the underlying indices may not result in a comparable change of the market value of the Notes. If the levels of the underlying indices on any trading day increase above their respective initial levels or downside thresholds the value of the Notes may not increase in a comparable manner, if at all. It is possible for the levels of the underlying indices to increase while the value of the Notes declines.

The determination of the payment at maturity on the Notes does not take into account all developments in the levels of the underlying indices. Changes in the levels of the underlying indices prior to the final valuation date will not be reflected in the calculation of the amount payable, if any, at maturity. The calculation agent will calculate the payment at maturity by comparing only the closing level of the least performing underlying index on the final valuation date relative to its initial level. No other levels will be taken into account. As a result, you may lose some or all of your principal amount even if the level of the least performing underlying index has risen at certain times during the term of the Notes before falling to a level below its downside threshold on the final valuation date.

The Notes are not designed to be short-term trading instruments. The price at which you will be able to sell the Notes to us or our affiliates prior to maturity, if at all, may be at a substantial discount from the principal amount of the Notes, even in cases where the closing levels of the underlying indices have appreciated since the trade date. In addition, you will not receive the benefit of any contingent repayment of principal associated with the downside thresholds if you sell the Notes before the maturity date. The potential returns described in this document assume that the Notes, which are not designed to be short-term trading instruments, are held to maturity. You must rely on your

own evaluation of the merits of an investment linked to the underlying indices. In the ordinary course of their business, our affiliates, or UBS or its affiliates, may have expressed views on expected movements in each of the underlying indices or the securities included in the underlying indices, and may do so in the future. These views or reports may be communicated to our respective clients and clients of our respective affiliates. However, these views are subject to change from time to time. Moreover, other professionals who transact business in markets relating to any underlying index, may at any time have significantly different views from those of ours, and those of UBS and its affiliates. For these reasons, you are encouraged to derive information concerning the underlying indices from multiple sources, and you should not rely solely on views expressed by us, UBS, or our respective affiliates.

Your return on the Notes is not linked to a basket consisting of the underlying indices. Rather, it will be contingent upon the performance of each individual underlying index. Unlike an instrument with a return linked to a basket of indices or other underlying assets, in which risk is mitigated and diversified among all of the components of the basket, you will be exposed equally to the risks related to each of the underlying indices. Poor performance by any one of the underlying indices over the term of the Notes may negatively affect your return and will not be offset or mitigated by a positive performance by the other underlying indices. To receive contingent repayment of principal at maturity from us, all underlying indices must close above their downside thresholds on the final valuation date. In addition, if not called at our election prior to maturity, you may incur a loss proportionate to the negative return of the least performing underlying index. Accordingly, your investment is subject to the market risk of each underlying index, which results in a higher risk of your incurring a loss at maturity.

Because the Notes are linked to the individual performance of more than one underlying index, it is more likely that one of the underlying indices will decrease in value below its downside threshold, increasing the probability that you will lose some or all of your initial investment. The risk that you will lose some or all of your initial investment in the Notes is greater if you invest in the Notes as opposed to securities that are linked to the performance of fewer underlying indices if their terms are otherwise substantially similar. With a greater total number of underlying indices, it is more likely that one of the underlying indices will be below its downside threshold, and therefore it is more likely that at maturity you will receive an amount in cash which is worth less than your principal amount. In

addition, the performances of a pair of underlying indices may be positively or negatively correlated, or may not be correlated at all. If a pair of underlying indices is not correlated to each other or is negatively correlated, there is a greater potential for one of those underlying indices to close below its downside threshold on the final valuation date, and therefore the risk that a loss of principal will occur is even greater. Further, with three underlying indices, it is more likely that the performance of one pair of underlying indices will not be correlated or will be negatively correlated.

It is impossible to predict what the correlations between the underlying indices will be over the term of the Notes. The underlying indices represent different equity markets and these different equity markets may not perform similarly over the term of the Notes. Although the correlation of the underlying indices' performance may change over the term of the Notes, the coupon rate is determined, in part, based on the underlying indices' performance calculated using our internal models at the time when the terms of the Notes are determined. As stated earlier, a higher coupon rate is generally associated with lower correlation of the underlying indices, which reflects a greater potential for a loss on your investment at maturity. See "Correlation of the Underlying Indices" below.

Risks Relating to Liquidity and Secondary Market Issues

Secondary trading in the Notes may be limited. The Notes will not be listed on a securities exchange. There may be little or no secondary market for the Notes. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the Notes easily.

RBCCM intends to act as a market maker for the Notes, but is not required to do so. Because we do not expect that other market makers will participate significantly in the secondary market for the Notes, the price at which you may be able to trade the Notes is likely to depend on the price, if any, at which RBCCM is willing to buy the Notes. If at any time RBCCM does not act as a market maker, it is likely that there would be little or no secondary market for the Notes. We expect that transaction costs in any secondary market would be high. As a result, the difference between the bid and asked prices for the Notes in any secondary market could be substantial. If you sell the Notes before maturity, you may have to do so at a substantial discount from the issue price, and as a result, you may suffer substantial losses.

The terms of the Notes at issuance were influenced, and their market value prior to maturity will be influenced, by many unpredictable factors. Many economic and market factors influenced the terms of the Notes at issuance and will affect their value prior to maturity. These factors are similar in some ways to those that could affect the value of a combination of instruments that might be used to replicate the payments on the Notes, including a combination of a bond with one or more options or other derivative instruments. For the market value of the Notes, we expect that, generally, the levels of the underlying indices on any day will affect the value of the Notes more than any other single factor. However, you should not expect the value of the Notes in the secondary market to vary in proportion to changes in the levels of the underlying indices. The value of the Notes will be affected by a number of other factors that may either offset or magnify each other, including:

- the level of the underlying indices;
- whether the levels of the underlying indices are below their respective downside thresholds;
- the expected volatility of the underlying indices;
- the expected correlation of the underlying indices;
- the time to maturity of the Notes;
 - the dividend rate on the securities composing the underlying indices;
- interest and yield rates in the market generally, as well as in the markets of the equity securities composing the underlying indices;
- economic, financial, political, regulatory or judicial events that affect the underlying indices or the equity securities composing the underlying indices or stock markets generally, and which may affect the levels of the underlying indices;
- the exchange rate and the volatility of the exchange rate between the U.S. dollar and euro, which is the currency in which the equity securities included in the SX5E are traded; and
- our creditworthiness, including actual or anticipated downgrades in our credit ratings.

Some or all of these factors influenced the terms of the Notes at issuance and will influence the price you will receive if you choose to sell the Notes prior to maturity. The impact of any of the factors set forth above may enhance or

offset some or all of any change resulting from another factor or factors. You may have to sell the Notes at a substantial discount from the principal amount if the levels of the underlying indices are at, below or not sufficiently above, their respective initial levels or downside thresholds.

Risks Relating to the Underlying Indices

Changes that affect an underlying index will affect the market value of the Notes and the payments on the Notes. The policies of the applicable index sponsor concerning the calculation of each underlying index, additions, deletions or substitutions of the components of that underlying index and the manner in which changes affecting those components, such as stock dividends, reorganizations or mergers, may be reflected in the underlying index and, therefore, could affect the amounts payable on the Notes, and the market value of the Notes prior to maturity. The amounts payable on the Notes and their market value could also be affected if the index sponsor changes these policies, for example, by changing the manner in which it calculates the applicable underlying index, or if the index sponsor discontinues or suspends calculation or publication of that underlying index, in which case it may become difficult to determine the market value of the Notes.

We have no affiliation with any index sponsor and will not be responsible for any actions taken by an index sponsor. No index sponsor is an affiliate of ours or will be involved in the offering of the Notes in any way. Consequently, we have no control of the actions of any index sponsor, including any actions of the type that might impact the value of the Notes. No index sponsor has any obligation of any sort with respect to the Notes. Thus, no index sponsor has any obligation to take your interests into consideration for any reason, including

in taking any actions that might affect the value of the Notes. None of our proceeds from the issuance of the Notes will be delivered to any index sponsor.

The historical performance of the underlying indices should not be taken as an indication of their future performance. The levels of the underlying indices will determine the amount to be paid on the Notes. The historical performance of each underlying index does not give an indication of its future performance. As a result, it is impossible to predict whether the level of the underlying indices will rise or fall during the term of the Notes. The level of each underlying index will be influenced by complex and interrelated political, economic, financial and other factors. The level of each underlying index may decrease such that you may not receive any return on your investment. There can be no assurance that the level of each underlying index will not decrease so that at maturity you will not lose some or all of your investment.

An investment in the Notes is subject to risks associated with non-U.S. securities markets. The securities included in the SX5E have been issued by non-U.S. companies. An investment in securities linked to the value of non-U.S. equity securities involves particular risks. Non-U.S. securities markets may be more volatile than U.S. securities markets, and market developments may affect non-U.S. securities markets differently from the U.S. securities markets. Direct or indirect government intervention to stabilize these non-U.S. securities markets, as well as cross shareholdings among non-U.S. companies, may affect trading prices and volumes in those markets. Also, there is generally less publicly available information in the U.S. about non-U.S. companies than about those U.S. companies that are subject to the reporting requirements of the SEC, and non-U.S. companies are subject to accounting, disclosure, auditing and financial reporting standards and requirements that differ from those applicable to U.S. reporting companies.

Prices of securities in non-U.S. countries are subject to political, economic, financial and social factors that may be unique to the particular country. These factors, which could negatively affect the non-U.S. securities markets, include the possibility of recent or future changes in the economic and fiscal policies of non-U.S. governments, the possible imposition of, or changes in, currency exchange laws or other non-U.S. laws or restrictions applicable to non-U.S. companies or investments in non-U.S. equity securities, the possibility of fluctuations in the rate of exchange between currencies, the possibility of outbreaks of hostility and political instability and the possibility of natural disaster or adverse public health developments in the relevant region. Moreover, the economies of certain foreign countries may differ favorably or unfavorably from the U.S. economy in important respects, such as growth of gross national product, rate of inflation, trade surpluses or deficits, capital reinvestment, resources and self-sufficiency.

As a holder of the Notes, you will not have direct exposure to fluctuations in the U.S. dollar/euro exchange rate related to the SX5E. The value of the Notes will not be adjusted for exchange rate fluctuations between the U.S. dollar and the euro, even though any currency fluctuations could affect the performance of the SX5E. Therefore, if the euro appreciates or depreciates relative to the U.S. dollar over the term of the Notes, you will not receive any additional payment or incur any reduction in any payment on the Notes.

An investment in the Notes linked to the RTY is subject to risks associated in investing in stocks with a small market capitalization. The RTY consists of stocks issued by companies with relatively small market capitalizations. These companies often have greater stock price volatility, lower trading volume and less liquidity than large-capitalization companies. As a result, the level of this underlying index may be more volatile than that of a market measure that does not track solely small-capitalization stocks. Stock prices of small-capitalization companies are also often more vulnerable than those of large-capitalization companies to adverse business and economic developments, and the stocks of small-capitalization companies may be thinly traded, and be less attractive to many investors if they do not pay dividends. In addition, small capitalization companies are often less well-established and less stable financially than large-capitalization companies and may depend on a small number of key personnel, making them more vulnerable to loss of those individuals. Small capitalization companies tend to have lower revenues, less diverse product lines, smaller shares of their target markets, fewer financial resources and fewer competitive strengths than large-capitalization companies. These companies may also be more susceptible to adverse developments related to their products or services.

Risks Relating to Hedging Activities and Conflicts of Interest

We, UBS or our respective affiliates may have adverse economic interests to the holders of the Notes. RBCCM, UBS and our respective affiliates trade the securities represented by the underlying indices, and other financial instruments

related to the underlying indices, on a regular basis, for their accounts and for other accounts under our or their management. UBS, RBCCM and these affiliates may also issue or underwrite or assist unaffiliated entities in the issuance or underwriting of other securities or financial instruments that relate to the underlying indices. To the extent that we, UBS or any of our respective affiliates serves as issuer, agent or underwriter for such securities or financial instruments, our or their interests with respect to such products may be adverse to those of the holders of the Notes. Any of these trading activities could potentially affect the performance of the underlying indices and, accordingly, could affect the value of the Notes, and the amount, if any, payable on the Notes at maturity. We, UBS or our respective affiliates may currently or from time to time engage in business with the issuers of the securities represented by the underlying indices, including extending loans to, or making equity investments in, or providing advisory services to them, including merger and acquisition advisory services. In the course of this business, we, UBS or our respective affiliates may acquire non-public information about these companies, and we will not disclose any such information to you. None of us, UBS or our respective affiliates makes any representation or warranty to any purchaser of a Note with respect to any matters whatsoever relating to our business with the issuer of any security included in the underlying indices or future price movements of any such security. Additionally, we, UBS or our respective affiliates may serve as issuer, agent or underwriter for additional issuances of securities with returns linked or related to changes in the level of one or more of the underlying indices. By introducing competing products into the marketplace in this manner, we could adversely affect the value of the Notes. We may hedge our obligations under the Notes through certain affiliates, who would expect to make a profit on such hedge. We or our affiliates may adjust these hedges by, among other things, purchasing or selling those assets at any time, including around the time of the final valuation date, which could have an impact on the return of the Notes. Because hedging our obligations entails risk and may be influenced by market forces beyond our or our affiliates' control, such hedging may result in a profit that is more or less than expected, or it may result in a loss.

We, UBS or our respective affiliates may currently or from time to time engage in trading activities related to the euro, which is the currency in which the securities represented by the SX5E are denominated. These trading activities could potentially affect the exchange rates with respect to the euro and could affect the level of the SX5E.

In the course of our currency trading activities, we, UBS or our respective affiliates may acquire material nonpublic information with respect to currency exchange rates, and we will not disclose any such information to you. In addition, we, UBS or our respective affiliates may produce and/or publish research reports, or otherwise express views, with respect to expected movements in currency exchange rates. We, UBS and our respective do not make any representation or warranty to any purchaser of the Notes with respect to any matters whatsoever relating to future currency exchange rate movements, and any prospective purchaser of the Notes should undertake an independent investigation of the applicable currencies as, in its judgment, is appropriate to make an informed decision with respect to an investment in the Notes.

The calculation agent will have significant discretion with respect to the Notes, which may be exercised in a manner that is adverse to your interests. Our wholly-owned subsidiary, RBCCM, will act as the calculation agent. The calculation agent will determine, among other things, the final level for each underlying index; the underlying return for each underlying index; and the amounts, if any, that we will pay to you on the Notes. The calculation agent will also be responsible for determining whether a market disruption event has occurred. The calculation agent may exercise its discretion in a manner which reduces your return on the Notes. Since these determinations by the calculation agent may affect the payments on the Notes, the calculation agent may have a conflict of interest if it needs to make a determination of this kind.

Market disruptions may adversely affect your return. The calculation agent may, in its sole discretion, determine that the markets have been affected in a manner that prevents it from properly determining the closing level of one or any of the underlying indices on the final valuation date or calculating the underlying return for each underlying index and the amount, if any, that we are required to pay you. These events may include disruptions or suspensions of trading in the markets as a whole. If the calculation agent, in its sole discretion, determines that any of these events prevents us or any of our affiliates from properly hedging our obligations under the Notes, it is possible that the maturity date will be postponed, and your return will be adversely affected. See “General Terms of the Notes—Market Disruption Events.”

Non-U.S. investors may be subject to certain additional risks. This document contains a general description of certain U.S. tax considerations relating to the Notes. In the event you are a non-U.S. investor, you should consult your tax advisors as to the consequences, under the tax laws of the country where you are resident for tax purposes, of acquiring, holding and disposing of the Notes and receiving the payments that might be due under the Notes. For a discussion of the Canadian federal income tax consequences of investing in the Notes, please see the section entitled “Tax Consequences—Canadian Taxation” in the accompanying prospectus. If you are not a Non-resident Holder (as defined in the section titled “Tax Consequences—Canadian Taxation” in the accompanying prospectus) or if you acquire the Notes in the secondary market, you should consult your tax advisors as to the consequences of acquiring, holding and disposing of the Notes and receiving the payments that may be due under the Notes.

Significant aspects of the income tax treatment of an investment in the Notes may be uncertain. The tax treatment of an investment in the Notes is uncertain. We do not plan to request a ruling from the Internal Revenue Service or the Canada Revenue Agency regarding the tax treatment of an investment in the Notes, and the Internal Revenue Service, the Canada Revenue Agency or a court may not agree with the tax treatment described in this document. The Internal Revenue Service has issued a notice indicating that it and the Treasury Department are actively considering whether, among other issues, a holder should be required to accrue interest over the term of an instrument such as the Notes even though that holder will not receive any payments with respect to the Notes until maturity and whether all or part of the gain a holder may recognize upon sale or maturity of an instrument such as the Notes could be treated as ordinary income. The outcome of this process is uncertain and could apply on a retroactive basis. Please read carefully the sections entitled “Supplemental Discussion of U.S. Federal Income Tax Consequences” in this document, the section “Tax Consequences” in the accompanying prospectus and the section entitled “Certain Income Tax Consequences” in the accompanying prospectus supplement. You should consult your tax advisor about your own tax situation.

Use of Proceeds and Hedging

The net proceeds we receive from the sale of the Notes will be used for general corporate purposes and, in part, by us or by one or more of our affiliates in connection with hedging our obligations under the Notes. The original issue price of the Notes includes the underwriting commission (as shown on the cover page of this document) paid with respect to the Notes and the estimated cost of hedging our obligations under the Notes.

In anticipation of the sale of the Notes, we expect to enter into hedging transactions with one or more of our affiliates, involving the underlying indices or the securities composing the underlying indices, and/or related listed and/or over-the-counter derivative instruments prior to or on the trade date. From time to time, including around the time of the maturity date, we and our respective affiliates may enter into additional hedging transactions or unwind those that we or they have entered into. In this regard, we and our respective affiliates may:

- acquire or dispose of investments relating to the underlying indices;
- acquire or dispose of long or short positions in listed or over-the-counter derivative instruments related to the underlying indices; or
- any combination of the above two.

We and our affiliates may acquire a long or short position in securities similar to the Notes from time to time and may, in our or their sole discretion, hold or resell those similar securities.

We and our affiliates may close out our or their hedges at any time during the term of the Notes. That step may, for example, involve sales or purchases of over-the-counter derivative instruments linked to the underlying indices.

Hypothetical Examples

Hypothetical terms only. Actual terms may vary. See the cover page for actual offering terms.

The examples below illustrate the hypothetical payments on a Coupon Payment Date, upon an issuer call or at maturity under different hypothetical scenarios for a \$10.00 Note on an offering of the Notes, with the assumptions set forth below.* We cannot predict the closing level of any Index on any trading day during the term of the Notes, including on the final valuation date. You should not take these examples as an indication or assurance of the expected performance of the Notes. Numbers in the examples below have been rounded for ease of analysis.

Principal Amount: \$10.00 per Note
 Term: Approximately 2.5 years (unless earlier called)
 Hypothetical Initial Level: 100.00 for the SPX Index, 100.00 for the SX5E Index and 100.000 for the RTY Index
 Coupon Rate: 5.00% per annum (1.25% per quarter)
 Optional Call: Quarterly
 Hypothetical Downside Threshold: 55.00 for the SPX Index, 55.00 for the SX5E Index and 55.000 for the RTY Index (which, with respect to each, is 55% of the hypothetical initial level of that index)
 Principal Amount: \$10.00

* Terms used for purposes of these hypothetical examples are not the actual initial levels or downside thresholds. The actual initial level and resulting downside threshold of each underlying index was based on its closing level on the trade date.

The examples below are hypothetical. These examples are intended to illustrate (a) the effect of an issuer call, (b) how the payment at maturity will depend on whether the closing level of any Index is less than its downside threshold, and (c) how the total return on the Notes may be less than the total return on a direct investment in any or all Indices in certain scenarios. The “total return” as used in this document is the number, expressed as a percentage that results from comparing the total payments per \$10.00 principal amount Note over the term of the Notes to the \$10.00 principal amount.

Example 1 — We Elect to Call the Notes on the First Call Settlement Date

Date	Payment (per Note)
	We pay the coupon
First Optional Call Notice Date	payment of \$0.125 on the Call Settlement Date.
Payment on Call Settlement Date:	\$10.125 (\$10.00 + \$0.125)
Total:	\$10.125
Total Return:	1.25%

In this example, we elect to call the Notes on the first Call Settlement Date. We will pay you on the Call Settlement Date \$10.125 per \$10.00 principal amount Note, which is equal to your principal amount plus the coupon payment due on the Coupon Payment Date that is also the Call Settlement Date. No further amounts will be owed to you under the Notes.

Example 2 — Notes Are NOT Called and the Final Level of Each Underlying Index Is Above Its Downside Threshold

Date	Final Level	Payment (per Note)
First to Ninth Coupon Payment Dates	N/A	Notes NOT called at our election. We pay the coupon payment of \$0.125 on each of the first to ninth Coupon Payment Dates.
Final Valuation Date	SPX Index: 110.00 SX5E Index: 90.00 RTY Index: 85.000	Notes NOT callable. Final Level of each underlying index is above its downside threshold; we repay principal plus the coupon payment of \$0.125 on the Maturity Date.
Payment at Maturity:	\$10.125 (\$10.00 + \$0.125)	

Prior Coupon Payments \$1.125 ($\0.125×9)

Total: \$11.25

Total Return: 12.50%

In this example, we do not elect to call the Notes and the Notes remain outstanding until maturity. Because the final level of each underlying index is greater than or equal to its downside threshold, we will pay you on the Maturity Date \$10.125 per \$10.00 principal amount Note, which is equal to your principal amount plus the coupon payment due on the Coupon Payment Date that is also the Maturity Date. Accordingly, we will have paid a total of \$11.25 per \$10.00 principal amount Note for a 12.50% total return over the approximately 2.5 year term of the Notes.

Example 3 — Notes Are NOT Called and the Final Level of One Underlying Index Is Below Its Downside Threshold

Date	Final Level Payment (per Note)	
First to Ninth		
Coupon Payment Dates	N/A	Notes NOT called at our election. We pay the coupon payments on each of the first to ninth Coupon Payment Dates.
Final Valuation Date	SPX Index: 45.00 SX5E Index: 110.00 RTY Index: 80.000	Notes NOT callable. Closing level of SPX Index is below its downside threshold; we pay the coupon payment on the Maturity Date, and we will repay less than the principal amount resulting in a loss proportionate to the decline of the least performing underlying index.
Payment at Maturity:	\$4.50 + \$0.125	
Prior Coupon Payments:	\$1.125 (\$0.125 × 9)	
Total:	\$5.75	
Total Return:	-42.50%	

In this example, we do not elect to call the Notes and the Notes remain outstanding until maturity. Because the final level of at least one underlying index is less than its downside threshold on the final valuation date, at maturity, we will pay you a total of \$5.75 per \$10.00 principal amount, for a -42.50% total return on the Notes, calculated as follows:

$$\$10.00 \times (1 + \text{underlying return of the least performing underlying index}) + \text{Coupon Payment}$$

In this example, the SPX is the least performing underlying index, with an underlying return of -55%.

$$\$10.00 \times (1 + -55.00\%) = \$4.50 + 0.125$$

When added to the coupon payments paid on each of the first to seventh Coupon Payment Dates, we will have paid a total of \$5.75 per \$10.00 principal amount Note, for a -42.50% total return over the approximately 2.5 year term of the Notes.

What Are the Tax Consequences of the Notes?

U.S. Federal Income Tax Consequences

Supplemental Discussion Of U.S. Federal Income Tax Consequences

The following is a general description of the material U.S. tax considerations relating to the Notes. It does not purport to be a complete analysis of all tax considerations relating to the Notes. Prospective purchasers of the Notes should consult their tax advisors as to the consequences under the tax laws of the country of which they are resident for tax purposes and the tax laws of Canada and the U.S. of acquiring, holding and disposing of the Notes and receiving payments under the Notes. This summary is based upon the law as in effect on the date of this document and is subject to any change in law that may take effect after such date.

Supplemental U.S. Tax Considerations

The following section supplements the discussion of U.S. federal income taxation in the accompanying prospectus and prospectus supplement. It applies only to those holders who are not excluded from the discussion of U.S. federal income taxation in the accompanying prospectus. This discussion applies only to U.S. holders and non-U.S. holders that will purchase the Notes upon original issuance and will hold the Notes as capital assets for U.S. federal income tax purposes.

You should consult your tax advisor concerning the U.S. federal income tax and other tax consequences of your investment in the Notes in your particular circumstances, including the application of state, local or other tax laws and the possible effects of changes in federal or other tax laws.

We intend to treat coupon payments as U.S. source income for U.S. federal income tax purposes.

We will not attempt to ascertain whether the issuer of any of the component stocks included in any underlying index would be treated as a “passive foreign investment company” within the meaning of Section 1297 of the Internal Revenue Code of 1986, as amended (the “Code”), or a “U.S. real property holding corporation” within the meaning of Section 897 of the Code. If the issuer of one or more of such stocks were so treated, certain adverse U.S. federal income tax consequences could possibly apply to a holder. You should refer to any available information filed with the SEC and other authorities by the issuers of the component stock included in any underlying index and consult your tax advisor regarding the possible consequences to you in this regard, if any.

NO STATUTORY, JUDICIAL OR ADMINISTRATIVE AUTHORITY DIRECTLY DISCUSSES HOW THE NOTES SHOULD BE TREATED FOR U.S. FEDERAL INCOME TAX PURPOSES. AS A RESULT, THE U.S. FEDERAL INCOME TAX CONSEQUENCES OF AN INVESTMENT IN THE NOTES ARE UNCERTAIN. BECAUSE OF THE UNCERTAINTY, YOU SHOULD CONSULT YOUR TAX ADVISOR IN DETERMINING THE U.S. FEDERAL INCOME TAX AND OTHER TAX CONSEQUENCES OF YOUR INVESTMENT IN THE NOTES, INCLUDING THE APPLICATION OF STATE, LOCAL OR OTHER TAX LAWS AND THE POSSIBLE EFFECTS OF CHANGES IN FEDERAL OR OTHER TAX LAWS.

In the opinion of our counsel, Morrison & Foerster LLP, it would generally be reasonable to treat your Notes as an investment unit consisting of (i) a non-contingent debt instrument issued by us to you (the “Debt Portion”) and (ii) a put option with respect to the Reference Stock written by you and purchased by us (the “Put Option”). The balance of this disclosure assumes this treatment is proper and will be respected for U.S. federal income tax purposes. Pursuant to this treatment, 1.90% of each stated interest payment (5.00% in total) will be treated as an interest payment and 3.10% of each stated interest payment will be treated as payment for the Put Option for U.S. federal income tax purposes.

Treatment as an Investment Unit

If your Notes are properly treated as an investment unit consisting of a Debt Portion and Put Option, it is likely that the Debt Portion of your Notes would be treated as having been issued for the principal amount of the Notes (if you are an initial purchaser) and that interest payments on the Notes would be treated in part as payments of interest and in part as payments for the Put Option. Amounts treated as interest would be included in income in accordance with your regular method of accounting for interest for U.S. federal income tax purposes. Amounts treated as payment for the Put Option would be deferred and accounted for upon the sale, call, or maturity of the Notes, as discussed below.

If you were to receive a cash payment of the full principal amount of your Notes upon the call or maturity of your Notes, such payment would likely be treated as (i) payment in full of the principal amount of the Debt Portion (which would not result in the recognition of gain or loss if you are an initial purchaser of your Notes) and (ii) the lapse of the Put Option which would likely result in your recognition of short-term capital gain in an amount equal to the amount

paid to you for the Put Option and deferred as described above. If you were to receive a cash payment upon the maturity of your Notes (excluding cash received as a coupon) of less than the full principal amount of your Notes, such payment would likely be treated as (i) payment in full of the principal amount of the Debt Portion (which would not result in the recognition of gain or loss if you are an initial purchaser of your Notes) and (ii) the cash settlement of the Put Option pursuant to which you paid to us an amount equal to the excess of the principal amount of your Notes over the amount that you received upon the maturity of your Notes (excluding cash received as a coupon) in order to settle the Put Option. If the aggregate amount paid to you for the Put Option and deferred as described above is greater than the amount you are deemed to have paid to us to settle the Put Option, you will likely recognize short-term capital gain in an amount that is equal to such excess. Conversely, if the amount paid to you for the Put Option and deferred as described above is less than the amount you are deemed to have paid to us to settle the Put Option, you will likely recognize short-term capital loss in an amount that is equal to such difference. The deductibility of capital losses is subject to limitations.

Upon the sale of your Notes, you would be required to apportion the value of the amount you receive between the Debt Portion and Put Option on the basis of the values thereof on the date of the sale. You would recognize gain or loss with respect to the Debt Portion in an amount equal to the difference between (i) the amount apportioned to the Debt Portion and (ii) your adjusted U.S. federal income tax basis in the Debt Portion (which would generally be equal to the principal amount of your Notes if you are an initial purchaser of your Notes). Except to the extent attributable to accrued but unpaid interest with respect to the Debt Portion, such gain or loss would be long-term capital gain or loss if your holding period is greater than one year. The amount of cash that you receive that is apportioned to the Put Option (together with any amount of premium received in respect thereof and deferred as described above) would be treated as short-term capital gain. If the value of the Debt Portion on the date of the sale of your Notes is in excess of the amount you receive upon such sale, you would likely be treated as having made a payment (to the purchaser in the case of a sale) equal to the amount of such excess in order to extinguish your rights and obligations under the Put Option. In such a case, you would likely recognize short-term capital gain or loss in an amount equal to the difference between the premium you previously received in respect of the Put Option and the amount of the deemed payment made by you to extinguish the Put Option. The deductibility of capital losses is subject to limitations.

Alternative Characterizations

There is no judicial or administrative authority discussing how your Notes should be treated for U.S. federal income tax purposes. Therefore, other treatments would also be reasonable and the Internal Revenue Service might assert that treatment other than that described above is more appropriate.

For example, it is possible that your Security could be treated as a single debt instrument. Because the Notes have a term that exceeds one year, such a

debt instrument would be subject to the special tax rules governing contingent payment debt instruments. If your Security is so treated, you would be required to accrue interest income over the term of your Security based upon the yield at which we would issue a non-contingent fixed-rate debt instrument with other terms and conditions similar to your Security. You would recognize gain or loss upon the sale, call, or maturity of your Security in an amount equal to the difference, if any, between the amount you receive at such time and your adjusted basis in your Security. In general, your adjusted basis in your Security would be equal to the amount you paid for your Security, increased by the amount of interest you previously accrued with respect to your Security. Any gain you recognize upon the sale, call, or maturity of your Security would generally be ordinary income and any loss recognized by you at such time would generally be ordinary loss to the extent of interest you included in income in the current or previous taxable years with respect to your Security, and thereafter would be capital loss. The deductibility of capital losses is subject to limitations.

In addition, the Internal Revenue Service has released a notice that may affect the taxation of holders of “prepaid forward contracts” and similar instruments. According to the notice, the Internal Revenue Service and the U.S. Treasury Department are actively considering whether the holder of such instruments should be required to accrue ordinary income on a current basis. While it is not clear whether the Notes would be viewed as similar to such instruments, it is possible that any future guidance could materially and adversely affect the tax consequences of an investment in the Notes, possibly with retroactive effect.

Because of the absence of authority regarding the appropriate tax characterization of your Security, it is possible that the Internal Revenue Service could seek to characterize your Security in a manner that results in tax consequences to you that are different from those described above. For example, it is possible that you may be required to include the entire coupon into income when it is received. It is also possible that your Security may be characterized in whole or in part as a notional principal contract or as a different type of derivative contract. You should consult your tax advisor as to the tax consequences of possible alternative characterizations of your Security for U.S. federal income tax purposes.

Backup Withholding and Information Reporting

Payments made with respect to the Notes and proceeds from the call, sale or maturity of the Notes may be subject to a backup withholding tax unless, in general, the holder complies with certain procedures or is an exempt recipient. Any amounts so withheld generally will be refunded by the Internal Revenue Service or allowed as a credit against the holder's U.S. federal income tax liability, provided the holder makes a timely filing of an appropriate tax return or refund claim to the Internal Revenue Service.

Reports will be made to the Internal Revenue Service and to holders that are not exempted from the reporting requirements.

Non-U.S. Holders

The following discussion applies to non-U.S. holders of the Notes. You are a non-U.S. holder if you are a beneficial owner of a Security and are for U.S. federal income tax purposes a non-resident alien individual, a foreign corporation, or a foreign estate or trust.

As discussed above, the U.S. federal income tax treatment of the Notes is uncertain and withholding agents may withhold U.S. federal income tax at a 30% rate (or at a lower rate under an applicable income tax treaty) in respect of interest payments made on the Notes to a non-U.S. holder unless such payments are effectively connected with the conduct by the non-U.S. holder of a trade or business in the United States (in which case, to avoid withholding, the non-U.S. holder will be required to provide a Form W-8ECI). We will not pay any additional amounts in respect of such withholding. UBS, however, has informed us that they will not withhold U.S. federal income tax in respect of interest payments made on the Notes, provided you comply with applicable certification requirements, which certification may be made on Form W-8BEN or W-8BEN-E (or a substitute or successor form) on which you certify, under penalties of perjury, that you are not a U.S. person and provide your name and address, unless such payments are effectively connected with your conduct of a trade or business in the United States (in which case, to avoid withholding, you will be required to provide a Form W-8ECI (or a substitute or successor form)).

You will generally not be subject to U.S. federal income or withholding tax on any gain upon the sale or maturity of the Notes, provided that (i) you comply with applicable certification requirements, which certification may be made on Form W-8BEN or W-8BEN-E (or a substitute or successor form) on which you certify, under penalties of perjury, that you are not a U.S. person and provide your name and address, (ii) your gain is not effectively connected with your

conduct of a U.S. trade or business, and (iii) if you are a non-resident alien individual, you are not present in the U.S. for 183 days or more during the taxable year of the sale or maturity of the Notes. In the case of (ii) above, you generally would be subject to U.S. federal income tax with respect to any income or gain in the same manner as if you were a U.S. holder and, if you are a corporation, you may also be subject to a branch profits tax equal to 30% (or such lower rate provided by an applicable U.S. income tax treaty) of a portion of your earnings and profits for the taxable year that are effectively connected with its conduct of a trade or business in the U.S., subject to certain adjustments. Payments made to you may be subject to information reporting and to backup withholding unless you comply with applicable certification and identification requirements as to your foreign status.

A “dividend equivalent” payment is treated as a dividend from sources within the United States and such payments generally would be subject to a 30% U.S. withholding tax if paid to a non-U.S. holder. Under U.S. Treasury Department regulations, payments (including deemed payments) with respect to equity-linked instruments (“ELIs”) that are “specified ELIs” may be treated as dividend equivalents if such specified ELIs reference an interest in an “underlying security,” which is generally any interest in an entity taxable as a corporation for U.S. federal income tax purposes if a payment with respect to such interest could give rise to a U.S. source dividend. However, the IRS has issued guidance that states that the U.S. Treasury Department and the IRS intend to amend the effective dates of the U.S. Treasury Department regulations to provide that withholding on dividend equivalent payments will not apply to specified ELIs that are not delta-one instruments and that are issued before January 1, 2018. Accordingly, non-U.S. holders should not be subject to withholding on dividend equivalent payments, if any, under the Notes. However, it is possible that the Notes could be treated as deemed reissued for U.S. federal income tax purposes upon the occurrence of certain events affecting the underlying indices or the Notes (for example, upon an underlying index rebalancing), and following such occurrence the Notes could be treated as subject to withholding on dividend equivalent payments. Non-U.S. holders that enter, or have entered, into other transactions in respect of the underlying indices or the Notes should consult their tax advisors as to the application of the dividend equivalent withholding tax in the context of the Notes and their other transactions. If any payments are treated as dividend equivalents subject to withholding, we (or the applicable paying agent) would be entitled to withhold taxes without being required to pay any additional amounts with respect to amounts so withheld.

As discussed above, alternative characterizations of the Notes for U.S. federal income tax purposes are possible. Should an alternative characterization, by reason of change or clarification of the law, by regulation or otherwise, cause payments as to the Notes to become subject to withholding tax, or if we or the institution through which you hold the Notes determine withholding is appropriate under current law, we or such institution will withhold tax at the applicable statutory rate. We will not be required to pay any additional amounts in respect of such withholding. Prospective investors should consult their own tax advisors in this regard.

Individual holders that own “specified foreign financial assets” may be required to include certain information with respect to such assets with their U.S. federal income tax return. You are urged to consult your own tax advisor regarding such requirements with respect to the Notes.

Foreign Account Tax Compliance Act

The Foreign Account Tax Compliance Act (“FATCA”) imposes a 30% U.S. withholding tax on certain U.S. source payments, including interest (and OID),

dividends, other fixed or determinable annual or periodical gain, profits, and income, and on the gross proceeds from a disposition of property of a type which can produce U.S. source interest or dividends (“Withholdable Payments”), if paid to a foreign financial institution (including amounts paid to a foreign financial institution on behalf of a holder), unless such institution enters into an agreement with the U.S. Treasury Department to collect and provide to the U.S. Treasury Department certain information regarding U.S. financial account holders, including certain account holders that are foreign entities with U.S. owners, with such institution or otherwise complies with FATCA. In addition, the Notes may constitute a “financial account” for these purposes and thus, be subject to information reporting requirements pursuant to FATCA. FATCA also generally imposes a withholding tax of 30% on Withholdable Payments made to a non-financial foreign entity unless such entity provides the withholding agent with a certification that it does not have any substantial U.S. owners or a certification identifying the direct and indirect substantial U.S. owners of the entity. Under certain circumstances, a holder may be eligible for refunds or credits of such taxes.

The U.S. Treasury Department and the IRS have announced that withholding on payments of gross proceeds from a sale or redemption of the Notes will only apply to payments made after December 31, 2018. If we determine withholding is appropriate with respect to the Notes, we will withhold tax at the applicable statutory rate, and we will not pay any additional amounts in respect of such withholding. Foreign financial institutions and non-financial foreign entities located in jurisdictions that have an intergovernmental agreement with the United States governing FATCA may be subject to different rules. Prospective investors are urged to consult with their own tax advisors regarding the possible implications of FATCA on their investment in the Notes.

Canadian Federal Income Tax Consequences

For a discussion of the material Canadian federal income tax consequences relating to an investment in the Notes, please see the section entitled “Tax Consequences—Canadian Taxation” in the accompanying prospectus, which you should carefully review prior to investing in the Notes.

Information About the Underlying Indices

We have derived all information contained in this document regarding each of the underlying indices, including, without limitation, its make up, method of calculation, and changes in its components, from publicly available sources. The information reflects the policies of, and is subject to change by, the applicable index sponsor. Each index sponsor, which owns the copyright and all other rights to the applicable underlying index, has no obligation to continue to publish, and may discontinue publication of, that underlying index. The consequences of an index sponsor discontinuing publication of the applicable underlying index are discussed below under the heading “General Terms of the Notes —Discontinuation of an Underlying Index; Alteration of Method of Calculation.” None of us, UBS or RBCCM accepts any responsibility for the calculation, maintenance or publication of any underlying index or any successor index.

The S&P 500® Index

The SPX is intended to provide an indication of the pattern of common stock price movement in the large capitalization segment of the U.S. equity market. The calculation of the level of the SPX is based on the relative value of the aggregate market value of the common stocks of 500 companies as of a particular time compared to the aggregate average market value of the common stocks of 500 similar companies during the base period of the years 1941 through 1943.

The index sponsor chooses companies for inclusion in the SPX with the aim of achieving a distribution by broad industry groupings that approximates the distribution of these groupings in the common stock population of its Stock Guide Database of over 10,000 companies, which the index sponsor uses as an assumed model for the composition of the total market. Relevant criteria employed by the index sponsor include the viability of the particular company, the extent to which that company represents the industry group to which it is assigned, the extent to which the market price of that company’s common stock generally is responsive to changes in the affairs of the respective industry, and the market value and trading activity of the common stock of that company. Eleven main groups of companies comprise the SPX, with the approximate percentage of the market capitalization of the SPX included in each group as of January 31, 2017 indicated in parentheses: Consumer Discretionary (12.3%); Consumer Staples (9.3%); Energy (7.2%); Financials (14.6%); Health Care (13.7%); Industrials (10.2%); Information Technology (21.3%); Materials (2.9%); Real Estate (2.8%); Telecommunication Services (2.5%); and Utilities (3.2%). S&P from time to time, in its sole discretion, may add companies to, or delete companies from, the SPX to achieve the objectives stated above.

The index sponsor calculates the SPX by reference to the prices of the constituent stocks of the SPX without taking account of the value of dividends paid on those stocks. As a result, the return on the Notes will not reflect the return you would realize if you actually owned the SPX constituent stocks and received the dividends paid on those stocks.

Computation of the SPX

While the index sponsor currently employs the following methodology to calculate the SPX, no assurance can be given that the index sponsor will not modify or change this methodology in a manner that may affect the Payment at Maturity.

Historically, the market value of any component stock of the SPX was calculated as the product of the market price per share and the number of then outstanding shares of such component stock. In March 2005, the index sponsor began shifting the SPX halfway from a market capitalization weighted formula to a float-adjusted formula, before moving the SPX to full float adjustment on September 16, 2005. The index sponsor’s criteria for selecting stocks for the SPX did not change with the shift to float adjustment. However, the adjustment affects each company’s weight in the SPX.

Under float adjustment, the share counts used in calculating the SPX reflect only those shares that are available to investors, not all of a company’s outstanding shares. Float adjustment excludes shares that are closely held by control groups, other publicly traded companies or government agencies.

In September 2012, all shareholdings representing more than 5% of a stock’s outstanding shares, other than holdings by “block owners,” were removed from the float for purposes of calculating the SPX. Generally, these “control holders” will include officers and directors, private equity, venture capital and special equity firms, other publicly traded companies that hold shares for control, strategic partners, holders of restricted shares, ESOPs, employee and family trusts, foundations associated with the company, holders of unlisted share classes of stock, government entities at all levels (other than government retirement/pension funds) and any individual person who controls a 5% or greater stake in a company as reported in regulatory filings. However, holdings by block owners, such as depositary banks, pension

funds, mutual funds and ETF providers, 401(k) plans of the company, government retirement/pension funds, investment funds of insurance companies, asset managers and investment funds, independent foundations and savings and investment plans, will ordinarily be considered part of the float.

Treasury stock, stock options, restricted shares, equity participation units, warrants, preferred stock, convertible stock, and rights are not part of the float. Shares held in a trust to allow investors in countries outside the country of domicile, such as depositary shares and Canadian exchangeable shares are normally part of the float unless those shares form a control block. If a company has multiple classes of stock outstanding, shares in an unlisted or non-traded class are treated as a control block.

For each stock, an investable weight factor (“IWF”) is calculated by dividing the available float shares by the total shares outstanding. As of September 21, 2012, available float shares are defined as the total shares outstanding less shares held by control holders. This calculation is subject to a 5% minimum threshold for control blocks. For example, if a company’s officers and directors hold 3% of the company’s shares, and no other control group holds 5% of the company’s shares, the index sponsor would assign that company an IWF of 1.00, as no control group meets the 5% threshold. However, if a company’s officers and directors hold 3% of the company’s shares and another control group holds 20% of the company’s shares, the index sponsor would assign an IWF of 0.77, reflecting the fact that 23% of the company’s outstanding shares are considered to be held for control. For companies with multiple classes of stock, the index sponsor calculates the weighted average IWF for each stock using the proportion of the total company market capitalization of each share class as weights.

The SPX is calculated using a base-weighted aggregate methodology. The level of the SPX reflects the total market value of all component stocks relative to the base period of the years 1941 through 1943. An indexed number is used to represent the results of this calculation in order to make the level easier to work with and track over time. The actual total market value of the component stocks during the base period of the

years 1941 through 1943 has been set to an indexed level of 10. This is often indicated by the notation 1941- 43 = 10. In practice, the daily calculation of the SPX is computed by dividing the total market value of the component stocks by the “index divisor.” By itself, the index divisor is an arbitrary number. However, in the context of the calculation of the SPX, it serves as a link to the original base period level of the SPX. The index divisor keeps the SPX comparable over time and is the manipulation point for all adjustments to the SPX, which is index maintenance.

Index Maintenance

Index maintenance includes monitoring and completing the adjustments for company additions and deletions, share changes, stock splits, stock dividends, and stock price adjustments due to company restructuring or spinoffs. Some corporate actions, such as stock splits and stock dividends, require changes in the common shares outstanding and the stock prices of the companies in the SPX, and do not require index divisor adjustments.

To prevent the level of the SPX from changing due to corporate actions, corporate actions which affect the total market value of the SPX require an index divisor adjustment. By adjusting the index divisor for the change in market value, the level of the SPX remains constant and does not reflect the corporate actions of individual companies in the SPX. Index divisor adjustments are made after the close of trading and after the calculation of the index closing level. Changes in a company’s shares outstanding of 5.00% or more due to mergers, acquisitions, public offerings, tender offers, Dutch auctions, or exchange offers are made as soon as reasonably possible. All other changes of 5.00% or more (due to, for example, company stock repurchases, private placements, redemptions, exercise of options, warrants, conversion of preferred stock, notes, debt, equity participation units, at the market offerings, or other recapitalizations) are made weekly and are announced on Fridays for implementation after the close of trading on the following Friday. Changes of less than 5.00% due to a company’s acquisition of another company in the SPX are made as soon as reasonably possible. All other changes of less than 5.00% are accumulated and made quarterly on the third Friday of March, June, September, and December, and are usually announced two to five days prior.

Changes in IWFs of more than five percentage points caused by corporate actions (such as merger and acquisition activity, restructurings, or spinoffs) will be made as soon as reasonably possible. Other changes in IWFs will be made annually when IWFs are reviewed.

Historical Information

The following table sets forth the quarterly high, low and period-end closing levels of the SPX, as reported by Bloomberg L.P. The historical performance of the SPX should not be taken as an indication of future performance. We cannot give you assurance that the performance of the SPX will result in the return of any of your initial investment.

Quarter Begin	Quarter End	Quarterly Closing High	Quarterly Closing Low	Quarterly Period-End Close
1/01/2008	3/31/2008	1,447.16	1,273.37	1,322.70
4/01/2008	6/30/2008	1,426.63	1,278.38	1,280.00

The EURO STOXX 50[®] Index

The EURO STOXX 50[®] Index (Bloomberg ticker “SX5E Index”) was created by STOXX Limited (“STOXX”), a company owned by Deutsche Börse AG. Publication of the SX5E began in February 1998, based on an initial Index level of 1,000 at December 31, 1991.

Index Composition and Maintenance

The EURO STOXX 50[®] Index is composed of 50 component stocks of market sector leaders from within the 19 EURO STOXX[®] Supersector indices, which represent the Eurozone portion of the STOXX Europe 600[®] Supersector indices.

The composition of the EURO STOXX 50[®] Index is reviewed annually, based on the closing stock data on the last trading day in August. The component stocks are announced on the first trading day in September. Changes to the component stocks are implemented on the third Friday in September and are effective the following trading day. Changes in the composition of the EURO STOXX 50[®] Index are made to ensure that the EURO STOXX 50[®] Index includes the 50 market sector leaders from within the EURO STOXX 50[®] Index.

The free float factors for each component stock used to calculate the EURO STOXX 50[®] Index, as described below, are reviewed, calculated, and implemented on a quarterly basis and are fixed until the next quarterly review.

The EURO STOXX 50[®] Index is also reviewed on an ongoing basis. Corporate actions (including initial public offerings, mergers and takeovers, spin-offs, delistings, and bankruptcy) that affect the EURO STOXX 50[®] Index composition are immediately reviewed. Any changes are announced, implemented, and effective in line with the type of corporate action and the magnitude of the effect.

Calculation of the EURO STOXX 50[®] Index

The EURO STOXX 50[®] Index is calculated with the “Laspeyres formula,” which measures the aggregate price changes in the component stocks against a fixed base quantity weight. The formula for calculating the EURO STOXX 50[®] Index value can be expressed as follows:

$$\text{EURO STOXX 50}^{\text{®}} \text{ Index} = \frac{\text{Free float market capitalization of the EURO STOXX 50}^{\text{®}} \text{ Index}}{\text{Adjusted base date market capitalization of the EURO STOXX 50}^{\text{®}} \text{ Index}} \times 1,000$$

The “free float market capitalization of the EURO STOXX 50[®] Index” is equal to the sum of the products of the closing price, market capitalization, and free float factor for each component stock as of the time the EURO STOXX 50[®] Index is being calculated.

The EURO STOXX 50[®] Index is also subject to a divisor, which is adjusted to maintain the continuity of the EURO STOXX 50[®] Index values across changes due to corporate actions, such as the deletion and addition of stocks, the substitution of stocks, stock dividends, and stock splits.

License Agreement

We have entered into a non-exclusive license agreement with STOXX providing for the license to us and certain of our affiliated or subsidiary companies, in exchange for a fee, of the right to use indices owned and published by STOXX (including the EURO STOXX 50[®] Index) in connection with certain securities, including the Notes offered hereby.

The license agreement between us and STOXX requires that the following language be stated in this document: STOXX has no relationship to us, other than the licensing of the SX5E and the related trademarks for use in connection with the Notes. STOXX does not:

- sponsor, endorse, sell, or promote the Notes;
- recommend that any person invest in the Notes offered hereby or any other securities;
- have any responsibility or liability for or make any decisions about the timing, amount, or pricing of the Notes;
- have any responsibility or liability for the administration, management, or marketing of the Notes; or
- consider the needs of the Notes or the holders of the Notes in determining, composing, or calculating the SX5E, or have any obligation to do so.

STOXX will not have any liability in connection with the Notes. Specifically:

- STOXX does not make any warranty, express or implied, and disclaims any and all warranty concerning: the results to be obtained by the Notes, the holders of the Notes or any other person in connection with the use of the SX5E and the data included in the SX5E;
- the accuracy or completeness of the SX5E and its data;
- the merchantability and the fitness for a particular purpose or use of the SX5E and its data;

·STOXX will have no liability for any errors, omissions, or interruptions in the SX5E or its data; and
· Under no circumstances will STOXX be liable for any lost profits or indirect, punitive, special, or consequential damages or losses, even if STOXX knows that they might occur.
· The licensing agreement between us and STOXX is solely for their benefit and our benefit, and not for the benefit of the holders of the Notes or any other third parties.

Historical Information

The following table sets forth the quarterly high, low and period-end closing levels of the SX5E, as reported by Bloomberg Financial Markets. The historical performance of the SX5E should not be taken as an indication of future performance. We cannot give you assurance that the performance of the SX5E will result in the return of any of your initial investment.

Quarter Begin	Quarter End	Quarterly Closing High	Quarterly Closing Low	Quarterly Period-End Close
1/01/2008	3/31/2008	4,339.23	3,431.82	3,628.06

The Russell
2000® Index

The Russell 2000® Index

The RTY was developed by Russell Investments (“Russell”) before FTSE International Limited (“FTSE”) and Russell combined in 2015 to create FTSE Russell, which is wholly owned by London Stock Exchange Group. Russell began dissemination of the RTY (Bloomberg L.P. index symbol “RTY”) on January 1, 1984. The RTY was set to 135 as of the close of business on December 31, 1986. FTSE Russell (the “index sponsor”) calculates and publishes the RTY. The RTY is designed to track the performance of the small capitalization segment of the U.S. equity market. As a subset of the Russell 3000® Index, the RTY consists of the smallest 2,000 companies included in the Russell 3000® Index. The Russell 3000® Index measures the performance of the largest 3,000 U.S. companies, representing approximately 98% of the investable U.S. equity market. The RTY is determined, comprised, and calculated by the index sponsor without regard to the Notes.

Selection of Stocks Underlying the RTY

All companies eligible for inclusion in the RTY must be classified as a U.S. company under the index sponsor’s country-assignment methodology. If a company is incorporated, has a stated headquarters location, and trades in the same country (American Depositary Receipts and American Depositary Shares are not eligible), then the company is assigned to its country of incorporation. If any of the three factors are not the same, the index sponsor defines three Home Country Indicators (“HCIs”): country of incorporation, country of headquarters, and country of the most liquid exchange (as defined by a two-year average daily dollar trading volume) (“ADDTV”) from all exchanges within a country. Using the HCIs, the index sponsor compares the primary location of the company’s assets with the three HCIs. If the primary location of its assets matches any of the HCIs, then the company is assigned to the primary location of its assets. If there is insufficient information to determine the country in which the company’s assets are primarily located, the index sponsor will use the primary country from which the company’s revenues are primarily derived for the comparison with the three HCIs in a similar manner. The index sponsor uses the average of two years of assets or revenues data to reduce potential turnover. If conclusive country details cannot be derived from assets or revenues data, the index sponsor will assign the company to the country of its headquarters, which is defined as the address of the company’s principal executive offices, unless that country is a Benefit Driven Incorporation “BDI” country, in which case the company will be assigned to the country of its most liquid stock exchange. BDI countries include: Anguilla, Antigua and Barbuda, Aruba, Bahamas, Barbados, Belize, Bermuda, Bonaire, British Virgin Islands, Cayman Islands, Channel Islands, Cook Islands, Curacao, Faroe Islands, Gibraltar, Guernsey, Isle of Man, Jersey, Liberia, Marshall Islands, Panama, Saba, Sint Eustatius, Sint Maarten, and Turks and Caicos Islands. For any companies incorporated or headquartered in a U.S. territory, including countries such as Puerto Rico, Guam, and U.S. Virgin Islands, a U.S. HCI is assigned.

All securities eligible for inclusion in the RTY must trade on a major U.S. exchange. Stocks must have a closing price at or above \$1.00 on their primary exchange on the last trading day in May to be eligible for inclusion during annual reconstitution. However, in order to reduce unnecessary turnover, if an existing member’s closing price is less than \$1.00 on the last day of May, it will be considered eligible if the average of the daily closing prices (from its primary exchange) during the month of May is equal to or greater than \$1.00. Initial public offerings are added each quarter and must have a closing price at or above \$1.00 on the last day of their eligibility period in order to qualify for index inclusion. If an existing stock does not trade on the “rank day” (typically the last trading day in May, but a confirmed timetable is announced each Spring) but does have a closing price at or above \$1.00 on another eligible U.S. exchange, that stock will be eligible for inclusion.

An important criterion used to determine the list of securities eligible for the RTY is total market capitalization, which is defined as the market price as of the last trading day in May for those securities being considered at annual reconstitution times the total number of shares outstanding. Where applicable, common stock, non-restricted exchangeable shares and partnership units/membership interests are used to determine market capitalization. Any other form of shares such as preferred stock, convertible preferred stock, redeemable shares, participating preferred stock, warrants and rights, installment receipts or trust receipts, are excluded from the calculation. If multiple share classes of common stock exist, they are combined. In cases where the common stock share classes act independently of each other (e.g., tracking stocks), each class is considered for inclusion separately. If multiple share classes exist, the pricing vehicle will be designated as the share class with the highest two-year trading volume as of the rank day in

May.

Companies with a total market capitalization of less than \$30 million are not eligible for the RTY. Similarly, companies with only 5% or less of their shares available in the marketplace are not eligible for the RTY. Royalty trusts, limited liability companies, closed-end investment companies (companies that are required to report Acquired Fund Fees and Expenses, as defined by the SEC, including business development companies), blank check companies, special-purpose acquisition companies, and limited partnerships are also not eligible for inclusion in the Russell U.S. Indices. Exchange traded funds and mutual funds are also excluded. Bulletin board, pink-sheets, and over-the-counter (“OTC”) traded securities are not eligible for inclusion.

Annual reconstitution is a process by which the RTY is completely rebuilt. On the rank last trading day of May, all eligible securities are ranked by their total market capitalization. The largest 4,000 become the Russell 3000E Index, and the other of the index sponsor’s indexes are determined from that set of securities. Reconstitution of the RTY occurs on the last Friday in June or, when the last Friday in June is the 29th or 30th, reconstitution occurs on the prior Friday. In addition, the index sponsor adds initial public offerings to the RTY on a quarterly basis based on total market capitalization guidelines ranking within the market-adjusted capitalization breaks established during the most recent reconstitution.

After membership is determined, a security’s shares are adjusted to include only those shares available to the public. This is often referred to as “free float.” The purpose of the adjustment is to exclude from market calculations the capitalization that is not available for purchase and is not part of the investable opportunity set.

License Agreement

FTSE Russell and Royal Bank of Canada have entered into a non-exclusive license agreement providing for the license to Royal Bank of Canada, and certain of its affiliates, in exchange for a fee, of the right to use indices owned and published by FTSE Russell in connection with some securities, including the Notes.

FTSE Russell does not guarantee the accuracy and/or the completeness of the RTY or any data included in the RTY and has no liability for any errors, omissions, or interruptions in the RTY. FTSE Russell makes no warranty, express or implied, as to results to be obtained by the calculation agent, holders of the Notes, or any other person or entity from the use of the RTY or any data included in the RTY in connection with the rights licensed under the license agreement described in this document or for any other use. FTSE Russell makes no express or implied warranties, and hereby expressly disclaims all warranties of merchantability or fitness for a particular purpose with respect to the RTY or any data included in the RTY. Without limiting any of the above information, in no event will FTSE Russell have any liability for any special, punitive, indirect or consequential damages, including lost profits, even if notified of the possibility of these damages.

The Notes are not sponsored, endorsed, sold or promoted by FTSE Russell. FTSE Russell makes no representation or warranty, express or implied, to the owners of the Notes or any member of the public regarding the advisability of investing in securities generally or in the Notes particularly or the ability of the RTY to track general stock market performance or a segment of the same. FTSE Russell's publication of the RTY in no way suggests or implies an opinion by FTSE Russell as to the advisability of investment in any or all of the stocks upon which the RTY is based. FTSE Russell's only relationship to Royal Bank of Canada is the licensing of certain trademarks and trade names of FTSE Russell and of the RTY, which is determined, composed and calculated by FTSE Russell without regard to Royal Bank of Canada or the Notes. FTSE Russell is not responsible for and has not reviewed the Notes nor any associated literature or publications and FTSE Russell makes no representation or warranty express or implied as to their accuracy or completeness, or otherwise. FTSE Russell reserves the right, at any time and without notice, to alter, amend, terminate or in any way change the RTY. FTSE Russell has no obligation or liability in connection with the administration, marketing or trading of the Notes.

"Russell 2000" and "Russell 3000" are registered trademarks of FTSE Russell in the U.S. and other countries.

Historical Information

The following table sets forth the quarterly high, low and period-end closing levels of the RTY, as reported by Bloomberg L.P. The historical performance of the RTY should not be taken as an indication of future performance. We cannot give you assurance that the performance of the RTY will result in the return of any of your initial investment.

Quarter Begin	Quarter End	Quarterly Closing High	Quarterly Closing Low	Quarterly Period-End Close

Correlation of the Underlying Indices

The graph below illustrates the daily performance of the underlying indices from January 2, 2007 through February 10, 2017. For comparison purposes, each underlying index has been normalized to have a closing level of 100.00 on January 3, 2006 by dividing the closing level of that index on each day by its closing level on January 2, 2007 and multiplying by 100.00. We obtained the closing levels used to determine the normalized closing levels set forth below from Bloomberg, without independent verification.

Past performance of the Indices is not indicative of their future performance.

The correlation of a pair of indices represents a statistical measurement of the degree to which their returns were similar to each other over a given period in terms of timing and direction (i.e., positive or negative). The closer the relationship of the daily returns of a pair of underlying indices over a given period, the more positively correlated those indices are. The graph above illustrates the historical performance of each of the underlying indices relative to one another over the time period shown and provides an indication of how close the relative performance of one underlying index has historically been to another. The lower (or more negative) the correlation between two underlying indices, the less likely it is that those indices will move in the same direction and, therefore, the greater the potential for one of those indices to close below its downside threshold on the final valuation date. This is because the less positively correlated a pair of indices are, the greater the likelihood that at least one of those indices will decrease in value. This results in a greater potential for a loss of principal at maturity. However, even if two underlying indices have a higher positive correlation, one or both of those indices might close below its downside threshold on the final valuation date, as both of those indices may decrease in value together.

The lower the correlation between two underlying indices, the greater the potential for one of those indices to close below its downside threshold on the final valuation date. Further, with three underlying indices, it is more likely that the performance of one pair of underlying indices will not be correlated or will be negatively correlated, and therefore this risk is even greater than with securities linked to the individual performance of fewer underlying indices.

Therefore, the greater the number of underlying indices, the greater the potential for a loss of principal at maturity. We determine the coupon rate for the Notes based, in part, on the correlation among the underlying indices, calculated using internal models at the time the terms of the Notes are set. As discussed above, increased risk resulting from lower correlation or from a greater number of underlying indices will be reflected in a higher coupon rate than would be payable on securities linked to fewer underlying indices or that have a higher degree of correlation.

General Terms of the Notes

The following description of the terms of the Notes supplements the description of the general terms of the debt securities set forth under the headings “Description of the Notes We May Offer” in the accompanying prospectus supplement and “Description of Debt Securities” in the accompanying prospectus. Capitalized terms used but not defined in this pricing supplement have the meanings assigned in the accompanying prospectus supplement, prospectus. The term “Note” refers to \$10 in principal amount of the Notes.

General

The Notes are senior unsecured debt obligations of Royal Bank of Canada that are linked to the underlying indices. The Notes will be issued under an indenture dated October 23, 2003, as it may be amended or supplemented from time to time, between us and The Bank of New York Mellon (as successor to JPMorgan Chase Bank, N.A.), as trustee.

The Notes are unsecured debt obligations and are not savings accounts or deposits of a bank. The Notes are not insured or guaranteed by the Canada Deposit Insurance Corporation, the U.S. Federal Deposit Insurance Corporation, or any other governmental agency of Canada or the United States.

The Notes are our unsecured and unsubordinated obligations and will rank *pari passu* with all of our other unsecured and unsubordinated obligations.

The Notes will be issued in denominations of \$10 and integral multiples thereof. The principal amount of each Note is \$10. The Notes will be represented by one or more permanent global securities registered in the name of The Depository Trust Company, or DTC, or its nominee, as described under “Description of Debt Securities—Ownership and Book-Entry Issuance” and “—Considerations Relating to DTC” in the prospectus.

All references to the “debt securities” in the accompanying prospectus and all references to the “notes” in the accompanying prospectus supplement shall be read as and shall apply to the “Notes” for the purpose of this pricing supplement. Unless the context otherwise requires, references to the “debt securities,” “notes” and the “Notes” in the prospectus, prospectus supplement and this document can be read interchangeably and are synonymous.

If any required payment on the Notes is due on a day that is not a business day, the payment will be paid on the next business day, and no interest will accrue in respect of that postponement.

A “closing level” will be the official closing level of the applicable underlying index on the applicable trading day, as determined by the calculation agent.

A “trading day” is a day, as determined by the calculation agent, on which trading is generally conducted on (i) the relevant exchanges (as defined below) for the applicable underlying index or the successor index and (ii) the exchanges on which futures or options contracts related to that underlying index or the successor index are traded, other than a day on which trading on such relevant exchange or exchange on which such futures or options contracts are traded is scheduled to close prior to its regular weekday closing time.

If the final valuation date is not a trading day or if there is a market disruption event on that day, the final valuation date will be postponed to the immediately succeeding trading day during which no market disruption event shall have occurred or be continuing. In no event, however, will the final valuation date be postponed more than ten business days following the date originally scheduled. If the tenth business day following the date originally scheduled to be the final valuation date is not a trading day, or if there is a market disruption event on that date, the calculation agent will determine the closing level for the applicable underlying index in accordance with the formula for and method of calculating that underlying index last in effect prior to commencement of the market disruption event (or prior to the non-trading day), using the closing price (or, if trading in the relevant securities has been materially suspended or materially limited, the calculation agent’s good faith estimate of the closing price that would have prevailed but for such suspension or limitation or non-trading day) on that tenth scheduled business day of each security most recently constituting that underlying index.

For the avoidance of doubt, if an underlying index is subject to a non-trading day or market disruption event only the closing level of that underlying index shall be postponed; the closing level of any underlying index that is not so affected shall be determined on the scheduled final valuation date.

If, due to a market disruption event or otherwise, the final valuation date is postponed, the maturity date will be postponed by the same number of business days. However, if the final valuation date is postponed so that it falls less than three business days prior to the scheduled maturity date, the maturity date will be the third business day following the final valuation date, as so postponed.

If a coupon payment date or the maturity date is not a business day, then such date will be postponed to the next succeeding business day following the scheduled coupon payment date or maturity date. A “business day” is any day other than a day on which banking institutions in The City of New York are authorized or required by law, regulation or executive order to close or a day on which transactions in dollars are not conducted.

Subject to the foregoing and to applicable law (including, without limitation, U.S. federal laws), we or our affiliates may, at any time and from time to time, purchase outstanding Notes by tender, in the open market or by private agreement.

Calculation Agent

RBC Capital Markets, LLC will act as the calculation agent. The calculation agent determined the level of each underlying index on the trade date and will determine, among other things, the level of each underlying index on the final valuation date, and the payments to be made, if any, on the Notes. In addition, the calculation agent will determine whether there has been a market disruption event or a discontinuation of any underlying index and whether there has been a material change in the method of calculating an underlying index. All determinations made by the calculation agent will be at the sole discretion of the calculation agent and will, in the absence of manifest error, be conclusive for all purposes and binding on you and on us. We may appoint a different calculation agent from time to time after the date of this document without your consent and without notifying you.

All calculations with respect to the level of each underlying index will be rounded to the nearest one hundred-thousandth, with five one-millionths rounded upward (e.g., .876545 would be rounded to .87655); all dollar amounts related to determination of the payment per \$10 in principal amount of the Notes, if any, will be rounded to the nearest one ten-thousandth, with five one hundred-thousandths rounded upward (e.g., .87645 would be rounded up to .8765); and all dollar amounts paid, if any, on the aggregate principal amount of Notes per holder will be rounded to the nearest cent, with one-half cent rounded upward.

Market Disruption Events

Certain events may prevent the calculation agent from determining the closing level of each underlying index, and consequently, the amount, if any, that we will pay to you on the Notes. These events may include disruptions or suspensions of trading on the markets as a whole. We refer to each of these events individually as a “market disruption event.”

With respect to any underlying index and any relevant successor index, a “market disruption event,” means:

a suspension, absence or material limitation of trading of equity securities then constituting 20% or more of the level of the underlying index (or the relevant successor index) on the relevant exchanges (as defined below) for such securities for more than two hours of trading during, or during the one hour period preceding the close of, the principal trading session on such relevant exchange; or

a breakdown or failure in the price and trade reporting systems of any relevant exchange as a result of which the reported trading prices for equity securities then constituting 20% or more of the level of the underlying index (or the relevant successor index) during the one hour preceding the close of the principal trading session on such relevant exchange are materially inaccurate; or

a suspension, absence or material limitation of trading on the primary exchange or market for trading in futures or options contracts related to the underlying index (or the relevant successor index) for more than two hours of trading during, or during the one hour period preceding the close of, the principal trading session on such exchange or market; or

a decision to permanently discontinue trading in the relevant futures or options contracts;

in each case as determined by the calculation agent in its sole discretion; and

a determination by the calculation agent in its sole discretion that the event described above materially interfered with our ability or the ability of any of our affiliates to adjust or unwind all or a material portion of any hedge with respect to the Notes.

For purposes of determining whether a market disruption event with respect to any underlying index (or the relevant successor index) exists at any time, if trading in a security included in the underlying index (or the relevant successor index) is materially suspended or materially limited at that time, then the relevant percentage contribution of that security to the level of the underlying index (or the relevant successor index) will be based on a comparison of:

the portion of the level of the underlying index (or the relevant successor index) attributable to that security relative to

the overall level of the underlying index (or the relevant successor index),

in each case immediately before that suspension or limitation.

For purposes of determining whether a market disruption event with respect to any underlying index (or the relevant successor index) has occurred:

a limitation on the hours or number of days of trading will not constitute a market disruption event if it results from an announced change in the regular business hours of the relevant exchange, or the primary exchange or market for trading in futures or options contracts related to the underlying index (or the relevant successor index);

limitations pursuant to the rules of any relevant exchange similar to NYSE Rule 80B (or any applicable rule or regulation enacted or promulgated by any other self-regulatory organization or any government agency of scope similar to NYSE Rule 80B as determined by the calculation agent) on trading during significant market fluctuations will constitute a suspension, absence or material limitation of trading;

a suspension of trading in futures or options contracts on the underlying index (or the relevant successor index) by the primary exchange or market trading in such contracts by reason of

a price change exceeding limits set by such exchange or market,

an imbalance of orders relating to such contracts, or

a disparity in bid and ask quotes relating to such contracts

will, in each such case, constitute a suspension, absence or material limitation of trading in futures or options contracts related to the underlying index (or the relevant successor index); and

a “suspension, absence or material limitation of trading” on any relevant exchange or on the primary exchange or market on which futures or options contracts related to the underlying index (or the relevant successor index) are traded will not include any time when such exchange or market is itself closed for trading under ordinary circumstances.

“Relevant exchange” means, with respect to any underlying index or any relevant successor index, the primary exchange or market of trading for any security (or any combination thereof) then included in that underlying index or such successor index, as applicable.

Discontinuation of an Underlying Index; Alteration of Method of Calculation

If the index sponsor of an underlying index discontinues publication of that underlying index and the index sponsor or another entity publishes a successor or substitute index that the calculation agent determines, in its sole discretion, to be comparable to the discontinued underlying index (such index being referred to herein as a “successor index”), then the closing levels of that underlying index will be determined by reference to the level of such successor index at the close of trading on the relevant exchange for the successor index on such day.

Upon any selection by the calculation agent of a successor index, the calculation agent will cause written notice to be promptly furnished to the trustee, to us and to the holders of the Notes.

If an index sponsor discontinues publication of an underlying index prior to, and that discontinuation is continuing on or prior to the final valuation date, and the calculation agent determines, in its sole discretion, that no successor index is available at that time or the calculation agent has previously selected a successor index and publication of that successor index is discontinued prior to, and that discontinuation is continuing on, the applicable trading day, then the calculation agent will determine the closing level of that underlying index for that date. The closing level will be computed by the calculation agent in accordance with the formula for and method of calculating that underlying index or successor index, as applicable, last in effect prior to the discontinuation, using the closing price (or, if trading in the relevant securities has been materially suspended or materially limited, the calculation agent’s good faith estimate of the closing price that would have prevailed but for the suspension or limitation) at the close of the principal trading session on that date of each security most recently included in the underlying index or successor index, as applicable.

Notwithstanding these alternative arrangements, discontinuation of the publication of the underlying index or successor index, as applicable, may adversely affect the value of the Notes.

If at any time the method of calculating an underlying index or a successor index, or the level thereof, is changed in a material respect, or if an underlying index or a successor index is in any other way modified so that the underlying index or successor index does not, in the opinion of the calculation agent, fairly represent the level of the underlying index or successor index had those changes or modifications not been made, then the calculation agent will, at the close of business in New York City on the date on any date on which the closing level of the underlying index is to be determined, make any calculations and adjustments as, in the good faith judgment of the calculation agent, may be necessary in order to arrive at a level of a stock index comparable to the underlying index or successor index, as the case may be, as if those changes or modifications had not been made, and calculate the closing level with reference to the underlying index or such successor index, as adjusted. Accordingly, if the method of calculating an underlying index or a successor index is modified so that the level of the underlying index or such successor index is a fraction of what it would have been if there had been no such modification (e.g., due to a split in the underlying index), then the calculation agent will adjust its calculation of the underlying index or such successor index in order to arrive at a level of the underlying index or such successor index as if there had been no such modification (e.g., as if such split had not occurred).

Payment of Additional Amounts

We will pay any amounts to be paid by us on the Notes without deduction or withholding for, or on account of, any and all present or future income, stamp and other taxes, levies, imposts, duties, charges, fees, deductions or withholdings (taxes) now or hereafter imposed, levied, collected, withheld or assessed by or on behalf of Canada or any Canadian political subdivision or authority that has the power to tax, unless the deduction or withholding is required by law or by the interpretation or administration thereof by the relevant governmental authority. At any time a Canadian taxing jurisdiction requires us to deduct or withhold for or on account of taxes from any payment made under or in respect of the Notes, we will pay such additional amounts (“Additional Amounts”) as may be necessary so that the net amounts received by each holder (including Additional Amounts), after such deduction or withholding, shall not be less than the amount the holder would have received had no such deduction or withholding been required. However, no Additional Amounts will be payable with respect to a payment made to a holder of a Note or of a right to receive payments in respect thereto (a “Payment Recipient”), which we refer to as an “Excluded Holder,” in respect of a beneficial owner or Payment Recipient:

- (i) with whom we do not deal at arm’s length (within the meaning of the Income Tax Act (Canada)) at the time of making such payment;
- (ii) who is subject to such taxes by reason of the holder being connected presently or formerly with Canada or any province or territory thereof otherwise than by reason of the holder’s activity in connection with purchasing the

- Notes, the holding of Notes or the receipt of payments thereunder;
who is, or who does not deal at arm's length with a person who is, a "specified shareholder" (within the meaning of subsection 18(5) of the Income Tax Act (Canada)) of Royal Bank of Canada (generally a person will be a
- (iii) "specified shareholder" for this purpose if that person, either alone or together with persons with whom the person does not deal at arm's length, owns 25% or more of (a) our voting shares, or (b) the fair market value of all of our issued and outstanding shares);
who presents such Note for payment (where presentation is required, such as if a Note is issued in definitive form)
 - (iv) more than 30 days after the relevant date; for this purpose, the "relevant date" in relation to any payments on any Note means:
 - (a) the due date for payment thereof (whether at maturity or upon an earlier acceleration), or
if the full amount of the monies payable on such date has not been received by the trustee on or prior to such due
 - (b) date, the date on which the full amount of such monies has been received and notice to that effect is given to holders of the Notes in accordance with the indenture;
who could lawfully avoid (but has not so avoided) such withholding or deduction by complying, or procuring that any third party comply with, any statutory requirements necessary to establish qualification for an exemption from
 - (v) withholding or by making, or procuring that any third party make, a declaration of non-residence or other similar claim for exemption to any relevant tax authority; or
who is subject to deduction or withholding on account of any tax, assessment, or other governmental charge that is
 - (vi) imposed or withheld by reason of the application of Section 1471 through 1474 of the United States Internal Revenue Code of 1986, as amended (the "Code") (or any successor provisions), any regulation, pronouncement, or agreement thereunder, official interpretations thereof,

or any law implementing an intergovernmental approach thereto, whether currently in effect or as published and amended from time to time.

For the purposes of clause (iii) above, if a Note is presented for payment more than 30 days after the relevant date, we shall only be required to pay such Additional Amounts as shall have accrued as of such 30th day, and no further Additional Amounts shall accrue or become payable after such date.

For the avoidance of doubt, we will not have any obligation to pay any holders Additional Amounts on any tax which is payable otherwise than by deduction or withholding from payments made under or in respect of the Notes.

We will also make such withholding or deduction and remit the full amount deducted or withheld to the relevant authority in accordance with applicable law. We will furnish to the trustee, within 30 days after the date the payment of any taxes is due pursuant to applicable law, certified copies of tax receipts evidencing that such payment has been made or other evidence of such payment satisfactory to the trustee. We will indemnify and hold harmless each holder of Notes (other than an Excluded Holder) and upon written request reimburse each such holder for the amount of (x) any taxes so levied or imposed and paid by such holder as a result of payments made under or with respect to the Notes, and (y) any taxes levied or imposed and paid by such holder with respect to any reimbursement under (x) above, but excluding any such taxes on such holder's net income or capital.

For additional information, see the section entitled "Canadian Taxation" in the accompanying prospectus.

Events of Default

Under the heading "Description of Debt Securities—Events of Default" in the accompanying prospectus is a description of events of default relating to debt securities including the Notes.

Payment upon an Event of Default

If an event of default with respect to the Notes shall have occurred and be continuing, the amount declared due and payable per \$10 in principal amount of the Notes upon any acceleration of the Notes will be determined by the calculation agent and will be an amount in cash equal to the amount payable at maturity per \$10 in principal amount of the Notes as described above, calculated as if the date of acceleration were the final valuation date. The final coupon will be calculated on a 30/360 day basis.

If the maturity of the Notes is accelerated because of an event of default as described above, we will, or will cause the calculation agent to, provide written notice to the trustee at its New York office, on which notice the trustee may conclusively rely, and to DTC of the cash amount due with respect to the Notes as promptly as possible and in no event later than two business days after the date of acceleration.

Defeasance

The provisions described in the accompanying prospectus under the heading "Description of Debt Securities—Defeasance" are not applicable to the Notes.

Registrar, Transfer Agent and Paying Agent

Payment of amounts due at maturity on the Notes will be payable and the transfer of the Notes will be registrable at the principal corporate trust office of The Bank of New York Mellon in The City of New York.

The Bank of New York Mellon or one of its affiliates will act as registrar and transfer agent for the Notes. The Bank of New York Mellon will also act as paying agent and may designate additional paying agents.

Registration of transfers of the Notes will be effected without charge by or on behalf of The Bank of New York Mellon, but upon payment (with the giving of such indemnity as The Bank of New York Mellon may require) in respect of any tax or other governmental charges that may be imposed in relation to it.

Governing Law

The Notes will be governed by and interpreted in accordance with the laws of the State of New York.

Supplemental Plan of Distribution (Conflicts of Interest)

We have agreed to indemnify UBS and RBCCM against liabilities under the Securities Act of 1933, as amended, or to contribute payments that UBS and RBCCM may be required to make relating to these liabilities as described in the prospectus supplement and the prospectus. We have agreed that UBS may sell all or a part of the Notes that it will purchase from us to investors at the price to public or to its affiliates at the price indicated on the cover of this pricing supplement.

UBS may allow a concession not in excess of the underwriting discount set forth on the cover of this pricing supplement to its affiliates for distribution of the Notes. Subject to regulatory constraints and market conditions, RBCCM intends to offer to purchase the Notes in the secondary market, but it is not required to do so.

Delivery of the Notes will be made against payment for the Notes on February 17, 2017, which is the fifth (5th) business day following the Pricing Date (this settlement cycle being referred to as “T+5”). See “Plan of Distribution” in the prospectus supplement dated January 8, 2016. For additional information as to the relationship between us and RBC Capital Markets, LLC, please see the section “Plan of Distribution—Conflicts of Interest” in the prospectus dated January 8, 2016.

We or our affiliates may enter into swap agreements or related hedge transactions with one of our other affiliates or unaffiliated counterparties in connection with the sale of the Notes and RBCCM and/or an affiliate may earn additional income as a result of payments pursuant to the swap or related hedge transactions. See “Use of Proceeds and Hedging” on page 10 of this pricing supplement.

The value of the Notes shown on your account statement may be based on RBCCM’s estimate of the value of the Notes if RBCCM or another of our affiliates were to make a market in the Notes (which it is not obligated to do). That estimate will be based upon the price that RBCCM may pay for the Notes in light of then prevailing market conditions, our creditworthiness and transaction costs. For a period of approximately seven months after the issue date of the Notes, the value of the Notes that may be shown on your account statement may be higher than RBCCM’s estimated value of the Notes at that time. This is because the estimated value of the Notes will not include the underwriting discount and our hedging costs and profits; however, the value of the Notes shown on your account statement during that period may be a higher amount, potentially reflecting the addition of the underwriting discount and our estimated costs and profits from hedging the Notes. Any such excess is expected to decrease over time until the end of this period. After this period, if RBCCM repurchases your Notes, it expects to do so at prices that reflect their estimated value. This period may be reduced at RBCCM’s discretion based on a variety of factors, including but not limited to, the amount of the Notes that we repurchase and our negotiated arrangements from time to time with UBS.

For additional information as to the relationship between us and RBCCM, please see the section “Plan of Distribution—Conflicts of Interest” in the prospectus dated January 8, 2016.

No action has been or will be taken by us, RBCCM, UBS or any other dealer that would permit a public offering of the Notes or possession or distribution of this document or the accompanying prospectus supplement and prospectus, other than in the United States, where action for that purpose is required. No offers, sales or deliveries of the Notes, or distribution of this document, or the accompanying prospectus supplement, prospectus or any other offering material relating to the Notes, may be made in or from any jurisdiction except in circumstances which will result in compliance with any applicable laws and regulations and will not impose any obligations on us, UBS or any dealer.

Each of RBCCM and UBS has represented and agreed, and each dealer through which we may offer the Notes has represented and agreed, that it (i) will comply with all applicable laws and regulations in force in each non-U.S. jurisdiction in which it purchases, offers, sells or delivers the Notes or possesses or distributes this document and the accompanying prospectus supplement and prospectus and (ii) will obtain any consent, approval or permission required by it for the purchase, offer or sale by it of the Notes under the laws and regulations in force in each non-U.S. jurisdiction to which it is subject or in which it makes purchases, offers or sales of the Notes. We shall not have responsibility for any broker-dealer’s compliance with the applicable laws and regulations or obtaining any required consent, approval or permission.

Structuring the Notes

The Notes are our debt securities, the return on which is linked to the performance of the underlying indices. As is the case for all of our debt securities, including our structured notes, the economic terms of the Notes reflect our actual or perceived creditworthiness at the time of pricing. In addition, because structured notes result in increased operational,

funding and liability management costs to us, we typically borrow the funds under these Notes at a rate that is more favorable to us than the rate that we might pay for a conventional fixed or floating rate debt security of comparable maturity. Using this relatively lower implied borrowing rate rather than the secondary market rate is a factor that resulted in a higher initial estimated value of the Notes at the time their terms are set than if a secondary market rate was used. Unlike the estimated value included on the cover of this document, any value of the Notes determined for purposes of a secondary market transaction may be based on a different borrowing rate, which may result in a lower value for the Notes than if our initial internal borrowing rate were used.

In order to satisfy our payment obligations under the Notes, we may choose to enter into certain hedging arrangements (which may include call options, put options or other derivatives) on the issue date with RBCCM or one of our other subsidiaries. The terms of these hedging arrangements take into account a number of factors, including our creditworthiness, interest rate movements, the volatility of the underlying indices, and the tenor of the Notes. The economic terms of the Notes and their initial estimated value depend in part on the terms of these hedging arrangements.

The lower implied borrowing rate is a factor that reduces the economic terms of the Notes to you. The initial offering price of the Notes also reflects the underwriting commission and our estimated hedging costs. These factors resulted in the initial estimated value for the Notes on the trade date being less than their public offering price. See “Key Risks—The Initial Estimated Value of the Notes Is Less than the Price to the Public” above.

Employee Retirement Income Security Act

This section is only relevant to you if you are an insurance company or the fiduciary of a pension plan or an employee benefit plan (including a governmental plan, an IRA or a Keogh Plan) proposing to invest in the Notes.

The Employee Retirement Income Security Act of 1974, as amended (“ERISA”), imposes certain requirements on “employee benefit plans” (as defined in Section 3(3) of ERISA) subject to ERISA, including entities such as collective investment funds and separate accounts whose underlying assets include the assets of such plans (collectively, “ERISA Plans”) and on those persons who are fiduciaries with respect to ERISA Plans. Each fiduciary of an ERISA Plan should consider the fiduciary standards of ERISA in the context of the ERISA Plan’s particular circumstances before authorizing an investment in the covered bonds. Accordingly, among other factors, the fiduciary should consider whether the investment would satisfy the prudence and diversification requirements of ERISA and would be consistent with the documents and instruments governing the ERISA Plan.

In addition, Section 406 of ERISA and Section 4975 of the Internal Revenue Code prohibit certain transactions involving the assets of an ERISA Plan, as well as those plans that are not subject to ERISA but which are subject to Section 4975 of the Internal Revenue Code, such as individual retirement accounts, including entities whose underlying assets include the assets of such plans (together with ERISA Plans, “Plans”) and certain persons (referred to as “parties in interest” or “disqualified persons”) having certain relationships to such Plans, unless a statutory or administrative exemption is applicable to the transaction. Governmental plans may be subject to similar prohibitions. Therefore, a plan fiduciary considering purchasing Notes should consider whether the purchase or holding of such instruments might constitute a “prohibited transaction.”

Royal Bank of Canada and certain of its affiliates each may be considered a “party in interest” or a “disqualified person” with respect to many employee benefit plans by reason of, for example, Royal Bank (or its affiliate) providing services to such plans. Prohibited transactions within the meaning of ERISA or the Internal Revenue Code may arise, for example, if Notes are acquired by or with the assets of a Plan, and with respect to which Royal Bank or any of its affiliates is a “party in interest” or a “disqualified person,” unless those Notes are acquired under an exemption for transactions effected on behalf of that Plan by a “qualified professional asset manager” or an “in-house asset manager,” for transactions involving insurance company general accounts, for transactions involving insurance company pooled separate accounts, for transactions involving bank collective investment funds, or under another available exemption. Section 408(b)(17) provides an additional exemption for the purchase and sale of Notes and related lending transactions where neither the issuer of the Notes nor any of its affiliates have or exercise any discretionary authority or control or render any investment advice with respect to the assets of any Plan involved in the transaction and the Plan pays no more than “adequate consideration” in connection with the transaction. The person making the decision on behalf of a Plan or a governmental plan shall be deemed, on behalf of itself and any such plan, by purchasing and holding the Notes, or exercising any rights related thereto, to represent that (a) such purchase, holding and exercise of the Notes will not result in a non-exempt prohibited transaction under ERISA or the Internal Revenue Code (or, with respect to a governmental plan, under any similar applicable law or regulation) and (b) neither Royal Bank nor any of its affiliates is a “fiduciary” (within the meaning of Section 3(21) of ERISA) with respect to the purchaser or holder in connection with such person’s acquisition, disposition or holding of the Notes, or any exercise related thereto or as a result of any exercise by Royal Bank or any of its affiliates of any rights in connection with the Notes, and no advice provided by Royal Bank or any of its affiliates has formed a primary basis for any investment decision by or on behalf of such purchaser or holder in connection with the Notes and the transactions contemplated with respect to the Notes. If you are an insurance company or the fiduciary of a pension plan or an employee benefit plan, and propose to invest in the Notes, you should consult your legal counsel.

Terms Incorporated in Master Note

The terms appearing above under the captions “Final Terms of the Notes” and “General Terms of the Notes” are incorporated into the master note issued to DTC, the registered holder of the Notes.

Validity of the Notes

In the opinion of Norton Rose Fulbright Canada LLP, the issue and sale of the Notes has been duly authorized by all necessary corporate action of the Bank in conformity with the Indenture, and when the Notes have been duly executed, authenticated and issued in accordance with the Indenture and delivered against payment therefor, the Notes will be validly issued and, to the extent validity of the Notes is a matter governed by the laws of the Province of Ontario or Québec, or the laws of Canada applicable therein, and will be valid obligations of the Bank, subject to

equitable remedies which may only be granted at the discretion of a court of competent authority, subject to applicable bankruptcy, to rights to indemnity and contribution under the Notes or the Indenture which may be limited by applicable law; to insolvency and other laws of general application affecting creditors' rights, to limitations under applicable limitations statutes, and to limitations as to the currency in which judgments in Canada may be rendered, as prescribed by the Currency Act (Canada). This opinion is given as of the date hereof and is limited to the laws of the Provinces of Ontario and Québec and the federal laws of Canada applicable thereto. In addition, this opinion is subject to customary assumptions about the Trustee's authorization, execution and delivery of the Indenture and the genuineness of signatures and certain factual matters, all as stated in the letter of such counsel dated January 8, 2016, which has been filed as Exhibit 5.1 to Royal Bank's Form 6-K filed with the SEC dated January 8, 2016.

In the opinion of Morrison & Foerster LLP, when the Notes have been duly completed in accordance with the Indenture and issued and sold as contemplated by the prospectus supplement and the prospectus, the Notes will be valid, binding and enforceable obligations of Royal Bank, entitled to the benefits of the Indenture, subject to applicable bankruptcy, insolvency and similar laws affecting creditors' rights generally, concepts of reasonableness and equitable principles of general applicability (including, without limitation, concepts of good faith, fair dealing and the lack of bad faith). This opinion is given as of the date hereof and is limited to the laws of the State of New York. This opinion is subject to customary assumptions about the Trustee's authorization, execution and delivery of the Indenture and the genuineness of signatures and to such counsel's reliance on the Bank and other sources as to certain factual matters, all as stated in the legal opinion dated January 8, 2016, which has been filed as Exhibit 5.2 to the Bank's Form 6-K dated January 8, 2016.
