### SkyePharma to Develop Improved Controlled Release Version of Sular for First Horizon

LONDON, UK, 22 May 2006 - SkyePharma PLC (LSE: SKP; Nasdaq: SKYE) announces that it has entered into an agreement with First Horizon Pharmaceutical Corporation ("First Horizon", Nasdaq: FHRX) to develop a novel controlled release formulation of nisoldipine (nisoldipine), an antihypertensive that is First Horizon's largest product. First Horizon's controlled release product portfolio sales amounted to \$145 million in 2005. The SkyePharma version is designed to have an improved safety profile and is expected to replace the current version and to expand the market opportunity for Sular.

Frank Condella, SkyePharma's Chief Executive Officer, said: "SkyePharma's core competencies are the development of controlled release formulations of existing products. This new agreement reinforces our activities in this area and our commitment to the controlled release business of oral and inhalation products. We are also pleased to expand our collaboration with First Horizon, a leading pharmaceutical company."

SkyePharma will receive a mid-single digit royalty on net sales of Sular CR. SkyePharma will receive \$1 million in milestone payments. \$1 million has been paid at signing and up to \$4 million will be paid upon approval by the US Food & Drug Administration ("FDA"), which is expected in 2008. SkyePharma will manufacture the product from its Lyon manufacturing facility. First Horizon will fund all of SkyePharma's development costs and will market this product through its speciality sales force (currently 525 representatives and 1,000 health care physicians).

Nisoldipine, the active ingredient in Sular, is an antihypertensive agent used to reduce blood pressure. Approximately 60 million Americans (nearly one quarter of the population) currently have elevated blood pressure. High blood pressure is a major cause of stroke and heart attacks, and this number is increasing from demographic factors as the post-war baby boomers age. Only 60% of those affected are diagnosed and receive treatment but only half of those treated attain optimal blood pressure. This represents a significant opportunity for better treatments. Nisoldipine is a calcium channel blocker that blocks the entry of calcium into certain types of muscle cells. Because muscle cells need calcium to contract, calcium channel blockers block the entry of calcium and cause them to relax. Nisoldipine selectively relaxes the muscles of small arteries, resulting in little or no effect on muscles or the veins of the heart.
