GAZPROM, SHELL, MITSUI, MITSUBISHI SIGN SAKHALIN II PROTOCOL

On December 21, 2006 OAO Gazprom (Gazprom), Royal Dutch Shell plc (Shell), Mitsui & Co., Ltd (Mitsui) and Mitsubishi Corporation (Mitsubishi) have signed a protocol to bring Gazprom into the Sakhalin Energy Investment Company Ltd. (SEIC). Under the terms of the protocol, Gazprom will acquire a 50% stake plus one share in SEIC for a total cash purchase price of \$7.45 billion. Shell will retain a 27.5% stake, with Mitsui and Mitsubishi holding 12.5% and 10% stakes, respectively.

SEIC will remain as the operator of the Sakhalin II project. Gazprom will play a leading role as majority shareholder while Shell will continue to significantly contribute to SEIC management and remain technical advisor. Gazprom and the existing shareholders agreed that they will do their best to complete the project on schedule allowing LNG to be delivered to existing customers in Japan, Korea and the North American West Coast. All existing LNG sales contracts will remain in force and will be honored.

Gazprom and existing SEIC shareholders will enter into an Area of Mutual Interest arrangement, which will cover both future Sakhalin oil and gas exploration and production opportunities, and the building of Sakhalin II into a regional oil and LNG hub.

Furthermore, the shareholders and the Ministry of Industry and Energy of Russia as the authorized state body for the supervision of production sharing agreements have agreed to jointly resolve all outstanding issues. The Sakhalin II Amended Development Budget for the phase 2 of the project is expected to be approved by the Supervisory Board (a special committee which consists of the representatives of Russian Federation, Sakhalin Oblast, SEIC and its shareholders). The Production Sharing Agreement (PSA) of the Sakhalin II project will continue. The shareholders now look forward to implementing the project in line with the current schedule including obtaining all necessary permits and approvals granted in accordance with applicable Russian legislation and the PSA.

This is one of significant milestone in the Sakhalin II project and Mitsui and Mitsubishi most welcome Gazprom to join as a new member of our team. We trust this will farther strengthen the relationship between Russia and Japan and also give us an opportunity to continue to developing merit of additional energy resources in Sakhalin Island. Furthermore, we believe that SEIC will become a reliable LNG supplier in Asia and Pacific market through the mutual cooperation between 4 shareholders in SEIC.

Sakhalin is a new world-class oil and gas province, with estimated resources of some 45 billion barrels oil equivalent. Sakhalin II is the largest integrated oil and gas project in the world, with total resources of some 4 billion barrels oil equivalent.

Sakhalin II today has production capacity of 80,000 barrels oil equivalent per day. The next phase of the development will take the project capacity to 340,000 barrels oil equivalent per day, including 9.6 million tones per year of LNG production.

The second phase of the project is over 80% complete, with some \$12 billion invested to date. Over 17,000 people are currently employed in the construction of the project, of which around 70% are Russian nationals. The planned LNG production has been sold under contract to customers across the Asia-Pacific region. Shell is a leader in the global LNG industry, and sets the standard for reliability and cost performance. Sakhalin II is an important component in Shell's global LNG portfolio.

The Sakhalin II project is governed under a PSA, whereby the project partners finance the construction costs of the project, take on the development risk, and recover these costs from sales of oil and gas. So far, some \$600 million of royalty, bonuses and taxes have been paid to the Russian government by the end of 2006.

Sakhalin II includes the following elements:

Offshore production facilities including the Molikpaq platform (PA-A), the new PA-B and Lun-A platforms and some 300 km of offshore pipelines;

An onshore processing facility to take the gas and crude oil from both fields;

Two 800 km of onshore oil and gas pipelines to the south of the island;

An oil export facility capable of year-round operation;

The first LNG plant and associated export facilities built in Russia;

Island infrastructure upgrades, such as roads, bridges, rail, port, airport, and medical facility upgrades.
