

WHITING PETROLEUM CORP
Form DEFA14A
July 17, 2014

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549

SCHEDULE 14A

Proxy Statement Pursuant to Section 14(a) of the
Securities Exchange Act of 1934 (Amendment No.)

Filed by the Registrant

Filed by a Party other than the Registrant

Check the appropriate box:

- Preliminary Proxy Statement
- Confidential, for Use of the Commission Only (as permitted by Rule 14a-6(e)(2))
- Definitive Proxy Statement
- Definitive Additional Materials
- Soliciting Material Pursuant to Section 240.14a-12

Whiting Petroleum Corporation

(Name of Registrant as Specified In Its Charter)

(Name of Person(s) Filing Proxy Statement, if other than the Registrant)

Payment of Filing Fee (Check the appropriate box):

- No fee required
- Fee computed on table below per Exchange Act Rules 14a-6(i)(4) and 0-11.
 - (1) Title of each class of securities to which transaction applies:

 - (2) Aggregate number of securities to which transaction applies:

(3) Per unit price or other underlying value of transaction computed pursuant to Exchange Act Rule 0-11 (Set forth the amount on which the filing fee is calculated and state how it was determined):

(4) Proposed maximum aggregate value of transaction:

(5) Total fee paid:

.. Fee paid previously with preliminary materials.

.. Check box if any part of the fee is offset as provided by Exchange Act Rule 0-11(a)(2) and identify the filing for which the offsetting fee was paid previously. Identify the previous filing by registration statement number, or the Form or Schedule and the date of its filing.

(1) Amount Previously Paid:

(2) Form, Schedule or Registration Statement No.:

(3) Filing Party:

(4) Date Filed:

Growth

Whiting uses in this presentation the terms proved, probable and possible reserves. Proved reserves are reserves which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible from a given date forward from known reservoirs under existing economic conditions, operating methods and government regulations prior to the time at which contracts providing the right to operate expire, unless evidence indicates that renewal is reasonably certain. Probable reserves are reserves that are less certain to be recovered than proved reserves, but which, together with proved reserves, are as likely as not to be recovered. Possible reserves are reserves that are less certain to be recovered than probable reserves. Estimates of probable and possible reserves which may potentially be recoverable through additional drilling or recovery techniques are by nature more uncertain than estimates of proved reserves and accordingly are subject to substantially greater risk of not actually being realized by the Company.

Whiting uses in this presentation the term total resources, which consists of contingent and prospective resources, which SEC rules prohibit in filings of U.S. registrants. Contingent resources are resources that are potentially recoverable but not yet considered mature enough for commercial development due to technological or business hurdles. For contingent resources to move into the reserves category, the key conditions or contingencies that prevented commercial development must be clarified and removed. Prospective resources are estimated volumes associated with undiscovered accumulations. These represent quantities of petroleum which are estimated to be potentially recoverable from oil and gas deposits identified on the basis of indirect evidence but which have not yet been drilled. This class represents a higher risk than contingent resources since the risk of discovery is also added. For prospective resources to become classified as contingent resources, hydrocarbons must be discovered, the accumulations must be further evaluated and an estimate of quantities that would be recoverable under appropriate development projects prepared. Estimates of resources are by nature more uncertain than reserves and accordingly are subject to substantially greater risk of not actually being realized by the Company.

This presentation contains statements that Whiting Petroleum Corporation (Whiting) believes to be forward-looking statements within the meaning of Section 21E of the Securities Exchange Act of 1934. All statements other than historical facts, including statements regarding the expected benefits of the proposed transaction to Whiting and Kodiak Oil & Gas Corp. (Kodiak) and their shareholders, the anticipated completion of the proposed transaction or the timing thereof, the expected future reserves, production, financial position, business strategy, revenues, earnings, costs, capital expenditures and debt levels of the combined company, and plans and objectives of management for future operations, are forward-looking statements. Such forward-looking statements are subject to risks and uncertainties that could cause actual results to differ materially from those expressed in, or implied by, such statements. These risks and uncertainties include, but are not limited to: the ability to obtain shareholder, court and regulatory approvals of the proposed acquisition of Kodiak; the ability to complete the proposed acquisition of Kodiak on anticipated terms and timetable; Whiting's and Kodiak's ability to integrate successfully after the transaction and

achieve anticipated benefits from the proposed transaction; the possibility that various closing conditions for the transaction may not be satisfied or waived; risks relating to any unforeseen liabilities of Whiting or Kodiak; oil and natural gas prices; level of success in exploration, development and production activities; the impacts of federal and state laws; the impacts of hedging on results of operations; uncertainty regarding future operating results and plans, objectives and expectations; and other risks described under the caption "Risk Factors" in Whiting's and Kodiak's Annual Reports on Form 10-K for the period ended December 31, 2013. Whiting assumes no obligation, and disclaims any duty, to update the forward-looking statements in this communication. Whiting's production forecasts and expectations for future periods are dependent upon many assumptions, including estimates of production decline rates from existing wells and the undertaking and outcome of future drilling activity, which may be affected by significant commodity price declines or drilling cost increases. In this presentation, we refer to Adjusted Net Income, Discretionary Cash Flow, Cash Flow per Share, EBITDAX and Net Debt, which are non-GAAP measures that the Company believes are helpful in evaluating the performance of its business. A reconciliation of such non-GAAP measures to the relevant GAAP measures can be found at the end of the presentation.

Whiting Overview

Whiting Petroleum Corporation's Solberg 34-11 Tripad wells with Nabors drilling rig B15 on the Zalesky 34-8 Tripad, in background.

Whiting Overview

Whiting Petroleum Corporation, a Delaware corporation, is an independent oil and gas company that explores for, develops, acquires and produces crude oil, natural

gas and natural gas liquids primarily in the Rocky Mountain and Permian Basin regions of the United States. The Company's largest projects are in the Bakken and Three Forks plays in North Dakota, the Redtail Niobrara play in northeast Colorado and its enhanced oil recovery field in Texas. The Company trades publicly under the symbol WLL on the New York Stock Exchange.

2

Rigs currently drilling on July 13, 2014 per NDIC

3

As of July 13, 2014, Whiting had two additional rigs moving and Kodiak had one additional rig moving, for a combined operated 21 rigs in the Williston Basin

Expected benefits to Whiting

Increases weighting of production from Bakken/TFS

80% of pro forma Q1 2014 production from Bakken/TFS

855,000 combined net acres, with an inventory of 3,460 net Williston Basin drilling locations

Addition
of
complementary
acreage
position
in
area
Whiting
knows
very
well

Significantly enhanced growth potential from accelerated development of Kodiak resource base

Expect to increase Kodiak's rig fleet from 7 to 12 operated rigs by Q4 '15

Substantial present value benefit from acceleration

Materially increased scale enhances relative positioning of company vs. peers and strengthens
Whiting's credit profile and financial flexibility

All-stock transaction structure is credit enhancing

Expected to be accretive in 2015 and increasingly accretive thereafter across all metrics

DRILLING HIGHLIGHTS

Results from our high density pilots

support a 16-well per 960-acre drilling

pattern in the B

and A

zones. We

spud our 30F super pad located in the

Horsetail township in June 2014. This

high density pilot will test a 32-well

drilling spacing pattern in the A , B

and C

zones. If successful, our potential

drilling locations at Redtail would

increase to more than 6,600 gross wells.
