Investment description

Linked to the Russell 2000® Index

Unlike ordinary debt securities, the securities do not pay interest or repay a fixed amount of principal at maturity. Instead, the securities provide for a payment at maturity that may be greater than, equal to or less than the original offering price of the securities, depending on the performance of the Index from its starting level to its ending level.

The payment at maturity will reflect the following terms:

o **If the level of the Index increases (regardless of the extent of that increase) or stays the same:**

You will receive the original offering price plus a contingent fixed return of 39% of the original offering price

o **If the level of the Index decreases but the decrease is not more than 40%:**

You will be repaid the original offering price

o **If the level of the Index decreases by more than 40%:**

You will have full downside exposure to the decrease in the level of the Index from the starting level, and you will lose more than 40%, and possibly all, of the original offering price of your securities

Investors may lose some, or all, of the original offering price

Any positive return on the securities at maturity will be limited to the contingent fixed return, even if the ending level significantly exceeds the starting level; you will not participate in any appreciation of the Index beyond the contingent fixed return

All payments on the securities are subject to the credit risk of Wells Fargo & Company, and you will have no ability to pursue any securities included in the Index for payment; if Wells Fargo & Company defaults on its obligations, you could lose some or all of your investment

No periodic interest payments or dividends

No exchange listing; designed to be held to maturity

On the date of the accompanying pricing supplement, the estimated value of the securities is \$934.28 per security. The estimated value of the securities was determined for the issuer by Wells Fargo Securities, LLC using its proprietary pricing models. It is not an indication of actual profit to the issuer or to Wells Fargo Securities, LLC or any of the issuer's other affiliates, nor is it an indication of the price, if any, at which Wells Fargo Securities, LLC or any other person may be willing to buy the securities from you at any time after issuance. See "Investment Description" in the accompanying pricing supplement.

**The securities have complex features and investing in the securities involves risks not associated with an investment in conventional debt securities. See "Selected Risk Considerations" in this term sheet and "Risk Factors" in the accompanying pricing supplement.**

**This final term sheet should be read in conjunction with the accompanying pricing supplement, market measure supplement, prospectus supplement, and prospectus**

**NOT A BANK DEPOSIT AND NOT INSURED OR GUARANTEED BY THE FDIC OR ANY OTHER GOVERNMENTAL AGENCY**

This graph has been prepared for purposes of illustration only. Your actual return will depend on the actual ending level and whether you hold your securities to maturity.

(1) The annualized rates of return are calculated on a semi-annual bond equivalent basis with compounding.

(2) The starting level.

The above figures are for purposes of illustration only and may have been rounded for ease of analysis. The actual amount you receive at stated maturity and the resulting pre-tax rate of return will depend on the actual ending level.

How the redemption amount is calculated

The redemption amount payable at maturity will be determined as follows:

If the ending level is greater than or equal to the starting level, the redemption amount will be equal to \$1,000 *plus* the contingent fixed return

If the ending level is less than the starting level, but greater than or equal to the threshold level, the redemption amount will be equal to \$1,000

If the ending level is less than the threshold level, the redemption amount will be equal to \$1,000 *minus*

$$\$1,000 \times \frac{\text{starting level} - \text{ending level}}{\text{starting level}}$$

**If the ending level is less than the threshold level, you will lose more than 40%, and possibly all, of the original offering price of your securities at maturity.**
