KEY FEATURES
Quarter on quarter
Significant increase in gold production for a second consecutive quarter
· 12% increase in gold production
· 6% increase in tonnes milled
· 4% increase in total underground recovered grade
· Kusasalethu close to normal production levels
Reduced unit costs quarter on quarter
· cash operating costs decreased by 7% to R324 272/kg (US$1 013/oz)
· reduced all-in sustaining costs by 14% from R471 146/kg to R404 694/kg
  (19% reduction from US$1 551/oz to US$1 264/oz)
Operating profit[1] increased by 55% from R671 million to more
than R1 billion (46% increase from US$71 million to
US$104 million)

All figures represent continuing operations unless stated otherwise

FORWARD-LOOKING STATEMENTS

This quarterly report contains forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 with respect to Harmony's financial condition, results of operations, business strategies, operating efficiencies, competitive positions, growth opportunities for existing services, plans and objectives of management, markets for stock and other matters. Statements in this quarter that are not historical facts are "forward-looking statements" for the purpose of the safe harbour provided by Section 21E of the U.S. Securities Exchange Act of 1934, as amended, and Section 27A of the U.S. Securities Act of 1933, as amended. Forward-looking statements are statements that are not historical facts.

These statements include financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, products and services, and statements regarding future performance. Forward-looking statements are generally identified by the words "expect", "anticipates", "believes", "intends", "estimates" and similar expressions. These statements are only predictions. All forward-looking statements involve a number of risks, uncertainties and other factors and we cannot assure you that such statements will prove to be correct. Risks, uncertainties and other factors could cause actual events or results to differ from those expressed or implied by the forward-looking statements.

These forward-looking statements, including, among others, those relating to the future business prospects, revenues and income of Harmony, wherever they may occur in this quarterly report and the exhibits to this quarterly report, are necessarily estimates reflecting the best judgement of the senior management of Harmony and involve a number of risks and uncertainties that could cause actual results to differ materially from those suggested by the forward-looking statements. As a consequence, these forward-looking statements should be considered in light of various important factors, including those set forth in this quarterly report.

Important factors that could cause actual results to differ materially from estimates or projections contained in the forward-looking statements include, without limitation: overall economic and business conditions in the countries in which we operate; the ability to achieve anticipated efficiencies and other cost-savings in connection with past and future acquisitions; increases or decreases in the market price of gold; the occurrence of hazards associated with underground and surface gold mining; the occurrence of labour disruptions; availability, terms and deployment of capital; changes in government regulations, particularly mining rights and environmental regulations; fluctuations in exchange rates; currency devaluations and other macro-economic monetary policies; and socio-economic instability in the countries in which we operate.

Harmony's Integrated Annual Report,
Notice of Annual General Meeting and its
Annual Report filed on a Form 20F with the United States'
Securities and Exchange Commission for the year ended
30 June 2013 were released on 25 October 2013.

CONTENTS

Results for the first quarter
ended 30 September 2013

Chief executive officer's review

Despite short-term gold price volatility, long-term fundamentals remain in place for continued growth in commodity demand. Since the financial crash of 2008, investment demand has been among the gold market's principal drivers. The R/kg gold price has been static in the past two quarters and we are expecting this trend to continue in the short term.

As gold prices have weakened, gold mines world-wide remain under pressure with their rising costs. Our only means of remaining profitable is to reduce costs, improve our productivity and produce more gold. We believe that Harmony is well placed to meet these challenges.

We have been an acquisitive company, known for reinvesting in our assets to improve their performance. Our strategic advantages include:

- increasing gold grades
- lowest rand/tonne South African producer
- free cash flow
- unhedged
- strong balance sheet – low debt
- geared to SA currency – 93% of our gold is mined in South Africa

1. SAFETY

The South African operations experienced a challenging safety quarter with a regression in safety performance.

It is with deep regret that I report that four people were fatality injured in four separate incidences. They were Tiodosio Munguambe (a team leader) and Mr Carlitos Uetela (development team member) – both from Doornkop; and Thembekile Mapeyi (development team member) and Oscar Madosi (an engineering assistant) both from Kusasalethu.

My sincere condolences go to the families, friends and colleagues of these men.

Safety risk management is one of the main pillars in the Harmony safety strategy and is the main building block in the journey towards proactive safety management and ultimately to zero harm. Management and employees play an equally important role in the effective functioning of the safety risk management system and specifically with regards to issue-based risk management and continuous risk management.

During the past quarter management has paid a lot of attention to poor performing operations. In addition, all baseline risk assessments are currently part of a review process.

Due to the fatalities reported, the Fatality Injury Frequency Rate (FIFR) per million hours worked regressed year on year from 0.11 to 0.19 and quarter on quarter from 0.10 to 0.19.

During the quarter, the chief executive officer and various other executives continued high level safety audits at the operations.

Significant safety achievements during the quarter were:

- Unisel recorded 12 months of being fatality free
- Tshepong achieved more than 3 000 000 rail bound equipment fatality free shifts
- Tshepong achieved 2 000 000 fall of ground fatality free shifts
- Doornkop achieved 6 500 000 fall of ground fatality free shifts

2. OPERATIONAL RESULTS

Gold production for the September 2013 quarter increased by 12% to 9 635kg from 8 588kg in the June 2013 quarter. This was as a result of improved recovered grades at most of the underground operations and Kusasalethu building up to normal production after the temporary closure of the shaft earlier this year.

Operations that showed an improvement during the September 2013 quarter were Kusasalethu, Tshepong, Target 1, Phakisa, Hidden Valley and Unisel.

The 12% increase in production resulted in a significant increase in operating profit of 55% for the September 2013 quarter, increasing from R671 million in the June 2013 quarter to R1 037 million in the September 2013 quarter.

The rand gold price received remained steady with only a 0.4% increase to R429 566/kg (R427 534/kg in the June 2013 quarter). Quarter on quarter the US dollar gold price decreased by 5% from US$1 407/oz in the June 2013 quarter to US$1 342/oz in the September quarter.

The rand/dollar exchange rate weakened by 5% from R9.45/US$ in the previous quarter to R9.96/US$ in the September 2013 quarter.

Cash operating costs in the September 2013 quarter increased by R140 million compared to the June 2013 quarter. This was mainly as a result of a R38 million increase in wages (due to the annual wage increase), as well as a R147 million increase in electricity costs (due to winter tariffs). These increases in costs were partially offset by a R57 million saving at Hidden Valley.

Due to the increase in gold produced for the September 2013 quarter the rand per kilogram (cash cost) decreased by 7% from R347 456/kg in the June 2013 quarter to R324 272/kg in the quarter under review.

Total capital expenditure for the September 2013 quarter decreased by R183 million or 23% quarter on quarter to R622 million. Most operations recorded a decrease in capital expenditure with a major saving of R89 million at Hidden Valley.

3. FINANCIAL OVERVIEW

Revenue

Revenue improved from R3 483 million in the previous quarter to R4 018 million, driven by a 15% increase in gold sales and stable gold prices in rand terms at R429 566/kg.

Restructuring costs

Restructuring and employment termination costs of R94 million were recorded in the current quarter which should result in more long-term savings going forward.

Exploration costs

Due to the repositioning of the Wafi-Golpu project and other cost-saving initiatives in respect of the project, total exploration expenditure decreased from R219 million to R142 million for the quarter.

Gain on financial instruments

The gain on financial instruments is due to the increase in fair value of the investments in the various group rehabilitation trust funds.

A portion of these funds is invested in Equity Linked Deposits, which increased in value as the market rose. These gains can be attributed to an increase in the JSE shareholder weighted top 40 index (SWIX 40)

during the quarter.
Property, plant and equipment
Mining assets have decreased during the quarter as the Papua New Guinean currency (PGK) depreciated against all currencies towards the end of the quarter. Against the rand, it weakened from R4.49/PGK to R3.87/PGK resulting in lower rand equivalent balances reported on the balance sheet.

5

Borrowings and cash

The long-term portion of borrowings increased during the quarter as a further $60 million was drawn against the US dollar syndicated revolving credit facility. During the same period cash and cash equivalents increased by R199 million to R2 288 million resulting in a net debt of R871 million.

4. ALL-IN SUSTAINING COSTS MEASURES (WORLD GOLD COUNCIL)

The World Gold Council (WGC) released a guidance note in June 2013 on the calculation of 'all-in sustaining costs' which was developed by members of the council to create a better understanding of the overall costs associated with producing gold.

The 'all-in sustaining costs' is an extension of the existing 'cash cost' metrics and incorporates costs related to sustaining production.

Harmony has decided to adopt the all-in sustaining costs method and we will apply it to our calculations as from the September 2013 quarter onwards. For comparison purposes, we will be reporting on both our cash operating cost (R/kg or US$/oz) and the all-in sustaining costs in the future.

Harmony recorded an all-in sustaining cost of R404 694/kg for the September 2013 quarter, a 14% improvement compared to the R471 146/kg recorded in the June 2013 quarter, due to higher gold production.

5. EMPLOYEE RELATIONS

Two year wage agreement

A new two year wage agreement was signed on 10 September 2013.
In summary the agreement is as follows:

- Category 4 and 5 employees, and rock drill operators received an increase of 8% in basic wages as from 1 July 2013 and a CPI plus 1% increase as from 1 July 2014;
- Category 6 to 8 employees, miners and artisans, and officials, received an increase of 7.5% in basic wages as from 1 July 2013 and a CPI plus 0.5% increase as from 1 July 2014;
- the current monthly living out allowance increased to R1 820 per month on 1 September 2013 and will increase to R2 000 per month on 1 September 2014.

AMCU Recognition Agreement

On 4 October 2013, the recognition agreement with the Association of Mineworkers and Construction Union (AMCU), representing about 75% of the workforce at Kusasalethu, was signed at Kusasalethu. All the other recognised unions at the mine will continue to operate.

6. JOEL AND BEATRIX OPERATIONS EXCHANGE MINING RIGHT AREAS

Background

Harmony's Joel mining right is contiguous to Sibanye Gold Limited's (Sibanye) Beatrix mining right, which has resulted in a number of discussions between the parties over the last couple of years on the possibility of exchanging some mining right portions for the benefit of both parties. These discussions have finally culminated in agreed commercial terms during the quarter. As a result, an agreement was finalised and signed by Harmony and Sibanye. The main condition precedent is the approval by the Department of Mineral Resources of the respective section 102 applications. These approvals are expected to be obtained before the end of June 2014.

Commercial terms

Joel will exchange two portions of its mining right for two portions of Beatrix's mining right, as well as acquiring two additional portions from Beatrix.

The exchange portions are to be transferred between the parties for the same value.

The purchase consideration of the further two portions to be acquired by Joel will be in the form of a royalty of 3% on gold revenue generated from these two portions.

Motivation for the exchange and acquisition

The areas that Joel will relinquish are difficult to access from Joel and have been deemed uneconomical, while the portions that Joel will be acquiring are accessible and will increase the current life of mine.

7. WAFI-GOLPU

Drilling during the quarter focused on brownfield drilling, Golpu resource definition, potential shaft location and infrastructure geotechnical drilling. The drill programme for derisking the lower mine blocks has been designed, scheduled and has commenced. This programme will address confidence levels in the lower mining block.

Golpu resource definition drilling of the upper and lower mining blocks during the quarter has confirmed porphyry and associated grade through the southern upper and lower mining blocks.

IN CONCLUSION

All the original, marginal Harmony assets have been closed. Harmony has built new mines, enabling it to access new and higher grade mining areas and reducing the time it takes crews to get to the face. Growing our margins are all about reducing our costs, improving productivity and increasing our gold production. Major capital expenditure has been spent; we have a strong balance sheet with low debt and look forward to the value that Golpu will add in future. We remain firm believers in gold's ability to preserve value.

We are confident that these strategic foundations will support sustainable growth for all stakeholders as we deliver on the full potential of our asset base.

Graham Briggs

Chief executive officer

* Comparative figures for these operations have been restated as a result of the adoption of IFRIC 20 Stripping Costs in the Production Phase of a Surface Mine.
Refer to note 2 of the Financial Statements.

8

Results for the first quarter
ended 30 September 2013

Commentary on operational results

Harmony's upward trend in its gold production continued for a second consecutive quarter. Gold production was 12% higher quarter-on-quarter at 9 635kg, largely due to an 11% increase in underground tonnes milled and a 4% increase in underground recovered grade to 4.55g/t. The quarter included five days of protected industrial action which affected all the South African operations, except for Kusasalethu.

During the September quarter there were increases in labour costs (following the new two year wage agreement) and electricity costs (winter tariffs). These cost increases were more than offset by the increased production and savings in overall costs, resulting in our cash cost per kilogram being 7% lower at R324 272/kg quarter-on-quarter and a 14% reduction in all-in sustaining costs to R404 694/kg.

SOUTH AFRICAN OPERATIONS

Kusasalethu

The build-up at Kusasalethu continued during the quarter. Production was however hampered by two fatalities that occurred during the quarter in two separate incidents.

On 4 October 2013, the recognition agreement with the Association of Mineworkers and Construction Union (AMCU), representing about 75% of the workforce at Kusasalethu, was signed and management and the various unions are working together to ensure a sustainable future for the mine.

The previous quarter's loss was turned into an operating profit of R76 million in the September 2013 quarter – testimony of the efforts of management and the unions to turn around the mine's performance.

During the December 2013 quarter, management will continue to focus on building production at the mine.

Doornkop

Doornkop did not perform in line with its plan in the past quarter, mainly due to a 9% decrease in recovered grade to 3.24g/t and the impact of two fatalities at the mine, which resulted in a decline in gold production of 11% to 765kg. Tonnes milled decreased by 3% quarter on quarter to 236 000t. The decrease in grade is due to Doornkop not achieving the planned mining mix.

Focus in the next quarter will be to improve the recovered grade and the safety at the mine.

Phakisa

Phakisa continues to build up its production in line with its plan and recorded a second quarter of increased production, turning its operating loss recorded in the previous quarter into an operating profit.

An increase of 17% in tonnes milled (at 156 000t) and recovered grade of 11% (at 4.84g/t) during the quarter, resulted in a 30% increase in gold production at 755kg quarter on quarter. The improvements in temperatures in some of the working places attributed to the improvements in production.

During the December 2013 quarter, the remedial work at Freddies No. 3 ventilation shaft, which will improve the ventilation constraints at the mine, will continue.

Tshepong

Tshepong bounced back during the quarter and generated free cash flow after capital of R19 million as it increased tonnes milled by 18% at 249 000t and recovered grade by 9% at 4.21g/t, resulting in a 29% increase in gold production from 815kg in the previous quarter to 1 049kg in the September 2013 quarter.

The Tshepong team will continue their focus on improving stoping face length and reef development.

Masimong

Masimong had a challenging quarter as volumes decreased by 10% quarter on quarter to 189 000t while grade remained stable at 4.01g/t. This mine's underperformance resulted in a 10% decrease in gold production.

Our focus during the December 2013 quarter will be on managing the face length and focusing on clean mining in order to improve production.

Target 1

Target 1 generated free operational cash flow of R101 million, after capital during the September 2013 quarter. Gold production increased by 21% quarter on quarter to 1 081kg, due to increased volumes of 191 000t at a 13% improved recovered grade of 5.66g/t. The recovered grade is currently higher than the 5.13g/t average grade guided for financial year 2014 (FY14) and we expect this mine to continue its good performance in the next quarter.

Bambanani

Gold production increased by 2% due to a 10% increase in recovered grade at 12.22g/t. Bambanani is currently mining at a recovered grade higher than the average guidance given of 9.74g/t.

Improving safety and increasing square metres will be the focus of management at Bambanani during the December 2013 quarter.

Joel

Gold production remained stable quarter on quarter at 697kg, as the 5% decrease in recovered grade was offset by a 5% increase in tonnage. The recovered grade was lower due to mining a higher channel width than planned and therefore not achieving the planned face grade during the quarter.

During the next quarter, Joel will focus on monitoring and achieving the planned belt grade.

Unisel

Recovered grade at Unisel increased by 18% quarter on quarter, due to improved face grades, a decrease in stoping widths and a decrease in waste mining.

Target 3

A 6% decrease in gold production for the quarter is mainly due to lower recovered grade, as a result of a decrease in face grade during the quarter.

Increasing the amount of Basal reef panels and improving the environmental conditions in the sub-shaft of the mine will be the main focus areas at Target 3 during the next quarter.

9

Steyn 2

Due to a decrease in stoping widths and cleaner mining practices, Steyn 2 increased its recovered grade for the quarter by 21%, resulting in a 21% increase in gold production. Tonnes milled remained steady quarter-on-quarter.

Phoenix (tailings)

The 11% increase in gold production is mainly due to an increase in the plant head grade, while a 5% increase in tonnes milled supported the increase further.

Surface dumps

The decreases in gold production at the surface dumps are due to the improved reef deliveries from the underground operations. Volumes treated are dependent on available plant capacity after reef deliveries. Plant capacity was well utilised to maximise the gold output.

Kalgold

Kalgold's gold production decreased by 9% quarter on quarter due to challenges with the crushing system at the plant, such as the maintenance of conveyor belts, splicing of belts and refurbishment of conveyer belts chutes. Costs and capital were well controlled and are below the average guided for FY14.

In the next quarters, management will focus on delivering the planned plant infrastructure.

INTERNATIONAL OPERATIONS

Hidden Valley (held in Morobe Mining Joint Ventures – 50% of attributable production reflected)

Hidden Valley increased its gold production by 7% (775kg) quarter on quarter, due to a 10% increase in mill throughput and a 3% increase in gold recoveries, partly offset by a 3% reduction in gold grade.

The commissioning of the crusher is largely complete, configuration changes will be implemented during the December 2013 quarter and are expected to improve throughput and feed reliability to the mill.

An operating profit of R48 million was generated during the quarter.

During the December 2013 quarter, management aims to reduce costs further and increase the amount of tonnes crushed and conveyed.

11

The unaudited condensed consolidated financial statements for the three months ended 30 September 2013 have been prepared by Harmony Gold Mining Company Limited's corporate reporting team headed by Mr Herman Perry. This process was supervised by the financial director, Mr Frank Abbott, and approved by the board of Harmony Gold Mining Company Limited. These financial statements have not been audited or independently reviewed.

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
for the period ended 30 September 2013 (Rand)

1. Accounting policies

Basis of accounting

The condensed consolidated financial statements for the three months ended 30 September 2013 have been prepared in accordance with
IAS 34, Interim Financial Reporting, JSE Listings Requirements, SAICA Financial Reporting Guides as issued by the Accounting Practices
Committee and in the manner required by the Companies Act of South Africa. They should be read in conjunction with the annual financial
statements for the year ended 30 June 2013, which have been prepared in accordance with International Financial Reporting Standards as
issued by the International Accounting Standards Board (IFRS). The accounting policies are consistent with those described in the annual
financial statements, except for the adoption of applicable revised and/or new standards issued by the International Accounting Standards Board.

2.
Change in accounting standard

IFRIC 20 Stripping Costs in the Production Phase of a Surface Mine

IFRIC 20 – Stripping Costs in the Production Phase of a Surface Mine (IFRIC 20), which became effective on 1 January 2013, clarifies the
requirements for accounting for the costs of stripping activity in the production phase of surface mining when two benefits accrue: (i) usable
ore that can be used to produce inventory, and (ii) improved access to further quantities of material that will be mined in future periods.

Harmony has applied IFRIC 20 on a retrospective basis in compliance with the transitional requirements of IFRIC 20 for the earliest prior period
presented, which for the year ended 30 June 2013 is 30 June 2012.

Harmony previously accounted for stripping costs incurred during the production phase to remove waste material by deferring these costs,
which were then charged to production costs on the basis of the average life-of-mine stripping ratio.

A stripping activity asset shall be recognised if all of the following are met:

(i) it is probable that the future economic benefit (improved access to the orebody) associated with the stripping activity will flow to the entity;
(ii) the entity can identify the component of the ore body for which access has been improved; and
(iii) the cost relating to the stripping activity associated with that component can be measured reliably.

The stripping asset shall be depreciated over the expected useful life of the identified component of the ore body based on the units of
production method.

If there is no identifiable component of the orebody to which the predecessor asset relates, the asset is written off to retained earnings at the
beginning of the earliest period presented.

The comparative periods presented have been restated. The restatement had no effect on the condensed consolidated cash flow statements.

The results for the year ended 30 June 2013 and the financial position at that date have been audited, but the restatement of the results and
balances affected by IFRIC 20 have not been audited.

Reconciliation of the effect of the change in accounting standard:

** The comparative financials have been restated following the adoption of IFRIC 20. Refer to note 2 for details.*

1. The impairment in the June 2013 quarter consists of an impairment of R2.68 billion on Hidden Valley, R31 million on St Helena and R27 million on Steyn 2.
2. The credit in the June 2013 quarter relates to a change in estimate following the annual re-assessment.
3. Included in the September and June 2013 quarters are amounts relating to the restructuring at Hidden Valley and Wafi-Golpu and the introduction of voluntary retrenchment packages offered in South Africa.
4. This includes the cost relating to the Employee Share Ownership Plan (ESOP) awards that were granted in August 2012.

4. Deferred taxation

The net deferred taxation debit in the income statement in the June 2013 quarter is primarily due to the derecognition of the deferred tax asset amounting to R547 million previously recorded for the Hidden Valley operation.

5.

6. Borrowings
The Nedbank revolving credit facility was repaid in full during the December 2011 quarter and the full R850 million facility is available until
December 2013. The balance on Nedbank term facilities at 30 September 2013 is R458 million.
Two draw downs of US$30 million each were made from the US$300 million syndicated revolving credit facility during the September 2013
quarter. This takes the drawn level to US$270 million. The facility is repayable by September 2015.

(Restated)*

The "Reconciliation of segment information to consolidated financial statements" line item in the
segment report is broken down in the following elements, to give a better understanding of
the differences between the income statement, balance sheet and segment report:

Reconciliation of production profit to gross profit

Total segment revenue
4 018
4 619
Total segment production costs
(2 981)
(3 078)
Production profit per segment report
1 037
1 541
Discontinued operations
–
(141)
Production profit from continuing operations
1 037
1 400
Cost of sales items, other than production costs and royalty expense
(754)
(633)
Gross profit as per income statements
1
283
767

[1] The reconciliation was done up to the first recognisable line item on the income statement. The reconciliation will follow the income statement after that.

Figures in million

	30 September 2013 (Unaudited)	30 September 2012 (Unaudited) (Restated)*
Reconciliation of total segment mining assets to consolidated property, plant and equipment		
Property, plant and equipment not allocated to a segment		
Mining assets	1 155	720
Undeveloped property	5 139	5 139
Other non-mining assets	74	159
Wafi-Golpu assets	981	674
Less: Non-current assets previously classified as held-for-sale	–	(1 178)
	7 349	**5 514**

** The comparative periods have been restated following the adoption of IFRIC 20. Refer to note 2 for details.*
