FORM 4

**UNITED STATES SECURITIES AND EXCHANGE COMMISSION
 Washington, D.C. 20549**

OMB APPROVAL

OMB Number: 3235-0287
 Expires: January 31, 2005
 Estimated average burden hours per response... 0.5

Check this box if no longer subject to Section 16. Form 4 or Form 5 obligations may continue. See Instruction 1(b).

STATEMENT OF CHANGES IN BENEFICIAL OWNERSHIP OF SECURITIES

Filed pursuant to Section 16(a) of the Securities Exchange Act of 1934, Section 17(a) of the Public Utility Holding Company Act of 1935 or Section 30(h) of the Investment Company Act of 1940

(Print or Type Responses)

1. Name and Address of Reporting Person *

Explanation of Responses:

* If the form is filed by more than one reporting person, see Instruction 4(b)(v).

** Intentional misstatements or omissions of facts constitute Federal Criminal Violations. See 18 U.S.C. 1001 and 15 U.S.C. 78ff(a).

Note: File three copies of this Form, one of which must be manually signed. If space is insufficient, see Instruction 6 for procedure. Potential persons who are to respond to the collection of information contained in this form are not required to respond unless the form displays a currently valid OMB number. business combinations or significant changes in a collaborator's business strategy may also adversely affect a collaborator's willingness or ability to complete our obligations under any arrangement;

a collaborator could independently move forward with a competing drug candidate developed either independently or in collaboration with others, including our competitors; and collaborative arrangements are often terminated or allowed to expire, which would delay the development and may increase the cost of developing our drug candidates.

We have no manufacturing capacity and will rely on third party manufacturers for the late stage development and commercialization of any drugs or devices we may develop or sell.

We do not currently operate manufacturing facilities for clinical or commercial production of our drug candidates under development or our currently marketed ALIGN products. We currently lack the resources or the capacity to manufacture any of our products on a clinical or commercial scale. We depend upon a third party, Sinclair, to manufacture the commercial products sold by our ALIGN subsidiary and we can not rely upon Sinclair to continue to supply the products. We anticipate future reliance on a limited number of third party manufacturers until we are able, or decide to, expand our operations to include manufacturing capacities. Any performance failure on the part of manufacturers could delay late stage clinical development or regulatory approval of our drug, the commercialization of our drugs or our ability to sell our commercial products, producing additional losses and depriving us of potential product revenues.

If the FDA or other regulatory agencies approve any of our drug candidates for commercial sale, or if we significantly expand our clinical trials, we will need to manufacture them in larger quantities and will be required to secure alternative third-party suppliers to our current suppliers. To date, our drug candidates have been manufactured in small quantities for preclinical testing and clinical trials and we may not be able to successfully increase the manufacturing capacity, whether in collaboration with our current or future third-party manufacturers or on our own, for any of our drug candidates in a timely or economic manner, or at all. Significant scale-up of manufacturing may require additional validation studies, which the FDA and other regulatory bodies must review and approve. If we are unable to successfully increase the manufacturing capacity for a drug candidate whether for late stage clinical trials or for commercial sale or are unable to secure alternative third-party suppliers to our current suppliers, the drug development, regulatory approval or commercial launch of any related drugs may be delayed or blocked or there may be a shortage in supply. Even if any third party manufacturer makes improvements in the manufacturing process for our drug candidates, we may not own, or may have to share, the intellectual property rights to such innovation.

As we evolve from a company primarily involved in discovery and development to one also involved in the commercialization of drugs and devices, we may encounter difficulties in managing our growth and expanding our operations successfully.

In order to execute our business strategy, we will need to expand our development, control and regulatory capabilities and develop financial, manufacturing, marketing and sales capabilities or contract with third parties to provide these capabilities for us. If our operations expand, we expect that we will need to manage additional relationships with various collaborative partners, suppliers and other third parties. Our ability to manage our operations and any growth will require us to make appropriate changes and upgrades, as necessary, to our operational, financial and management controls, reporting systems and procedures wherever we may operate. Any inability to manage growth could delay the execution of our business plan or disrupt our operations.

The failure to attract and retain skilled personnel and key relationships could impair our drug development and commercialization efforts.

We are highly dependent on our senior management and key scientific, technical and sales and marketing personnel. Competition for these types of personnel is intense. The loss of the services of any member of our senior management, scientific, technical or sales or marketing staff may significantly delay or prevent the achievement of drug development and other business objectives and could have a material adverse effect on our business, operating results and financial condition. We also rely on consultants and advisors to assist us in formulating our strategy. All of our consultants and advisors are either self-employed or employed by other organizations, and they may have conflicts of interest or other commitments, such as consulting or advisory contracts with other organizations, that may affect their ability to contribute to us. The success of the commercialization of the ALIGN products depends, in large part, on our continued ability to develop and maintain important relationships with distributors and research and medical institutions. Failure to do that could have a material adverse effect on our ability to commercialize the ALIGN products.

We intend to expand and develop new drug candidates. We will need to hire additional employees in order to continue our clinical trials and market our drug candidates and medical devices. This strategy will require us to recruit additional executive management and scientific and technical personnel. There is currently intense competition for skilled executives and employees with relevant scientific and technical expertise, and this competition is likely to continue. The inability to attract and retain sufficient scientific, technical and managerial personnel could limit or delay our product development efforts, which would adversely affect the development of our drug candidates and commercialization of our potential drugs and growth of our business.

Our drug candidates are subject to extensive regulation, which can be costly and time-consuming, and we may not obtain approvals for the commercialization of any of our drug candidates.

The clinical development, manufacturing, selling and marketing of our drug candidates are subject to extensive regulation by the FDA and other regulatory authorities in the United States, the European Union and elsewhere. These regulations also vary in important, meaningful ways from country to country. We are not permitted to market a potential drug in the United States until we receive approval of an NDA from the FDA. We have not received an NDA approval from the FDA for any of our drug candidates.

Obtaining an NDA approval is expensive and is a complex, lengthy and uncertain process. The FDA approval process for a new drug involves completion of preclinical studies and the submission of the results of these studies to the FDA, together with proposed clinical protocols, manufacturing information, analytical data and other information in an Investigational New Drug, or IND, which must become effective before human clinical trials may begin. Clinical development typically involves three phases of study: Phase 1, 2 and 3. The most significant costs associated with clinical development are the pivotal or suitable for registration late Phase 2 or Phase 3 clinical trials as they tend to be the longest and largest studies conducted during the drug development process. After completion of clinical trials, an NDA may be submitted to the FDA. In responding to an NDA, the FDA may refuse to file the application, or if accepted for filing, the FDA may grant marketing approval, request additional information or deny the application if it determines that the application does not provide an adequate basis for approval. In addition, failure to comply with the FDA and other applicable foreign and U.S. regulatory requirements may subject us to administrative or judicially imposed sanctions. These include warning letters, civil and criminal penalties, injunctions, product seizure or detention, product recalls, total or partial suspension of production and refusal to approve either pending NDAs, or supplements to approved NDAs.

Despite the substantial time and expense invested in preparation and submission of an NDA or equivalents in other jurisdictions, regulatory approval is never guaranteed. The FDA and other regulatory authorities in the United States, the European Union and elsewhere exercise substantial discretion in the drug approval process. The number, size and design of preclinical studies and clinical trials that will be required for FDA or other regulatory approval will vary depending on the drug candidate, the disease or condition for which the drug candidate is intended to be used and the regulations and guidance documents applicable to any particular drug candidate. The FDA or other regulators can delay, limit or deny approval of a drug candidate for many reasons, including, but not limited to:

those discussed in the risk factor which immediately follows;

the fact that the FDA or other regulatory officials may not approve our or our third party manufacturer's processes or facilities; or

the fact that new regulations may be enacted by the FDA or other regulators may change their approval policies or adoption of new regulations requiring new or different evidence of safety and efficacy for the intended use of a drug candidate.

With regard to the ALIGN products, and following regulatory approval of any of our drug candidates, we are subject to ongoing regulatory obligations and restrictions, which may result in significant expense and limit our ability to commercialize our potential products.

With regard to our ALIGN products and our drug candidates, if any, approved by the FDA or by another regulatory authority, we are held to extensive regulatory requirements over product manufacturing, labeling, packaging, adverse event reporting, storage, advertising, promotion and record keeping. Regulatory approvals may also be subject to significant limitations on the indicated uses or marketing of the drug candidates. Potentially costly follow-up or post-marketing clinical studies may be required as a condition of approval to further substantiate safety or efficacy, or to investigate specific issues of interest to the regulatory authority. Previously unknown problems with the product or drug candidate, including adverse events of unanticipated severity or frequency, may result in restrictions on the marketing of the drug or device, and could include withdrawal of the drug or device from the market.

In addition, the law or regulatory policies governing pharmaceuticals may change. New statutory requirements may be enacted or additional regulations may be enacted that could prevent or delay regulatory approval of our drug candidates. We cannot predict the likelihood, nature or extent of adverse government regulation that may arise from future legislation or administrative action, either in the United States or elsewhere. If we are not able to maintain regulatory compliance, we might not be permitted to market our drugs and our business could suffer.

Our applications for regulatory approval could be delayed or denied due to problems with studies conducted before we in-licensed the rights to some of our product candidates.

We currently license some of the compounds and drug candidates used in our research programs from third parties. These include sapacitabine which was licensed from Daiichi-Sankyo. Our present research involving these compounds relies upon previous research conducted by third parties over whom we had no control and before we in-licensed the drug candidates. In order to receive regulatory approval of a drug candidate, we must present all relevant data and information obtained during our research and development, including research conducted prior to our licensure of the drug candidate. Although we are not currently aware of any such problems, any problems that emerge with preclinical research and testing conducted prior to our in-licensing may affect future results or our ability to document prior research and to conduct clinical trials, which could delay, limit or prevent regulatory approval for our drug candidates.

We face intense competition and our competitors may develop drugs that are less expensive, safer, or more effective than our drug candidates.

A large number of drug candidates are in development for the treatment of leukemia, lung cancer, lymphomas and nasopharyngeal cancer. Several pharmaceutical and biotechnology companies have nucleoside analogs or other products on the market or in clinical trials which may be competitive to sapacitabine in both hematological and oncology indications. These include Celgene, Cephalon, Eisai, Johnson & Johnson, Eli Lilly, Genzyme, GlaxoSmithKline, Hospira, Pfizer, Seattle Genetics, Sunesis and Vion. We believe that we are currently the only company that has an orally available CDK-specific agent in Phase 2 clinical trials but that there are a number of companies, including AstraZeneca, Eisai, Pfizer, Piramal Life Sciences, Roche, Merck and Bayer-Schering that are

developing CDK inhibitors in early stage clinical trials in cancer patients. Although Aventis,

a predecessor of Sanofi-Aventis, had previously announced that it has ceased Phase 2 development of alvocidib or flavopiridol, a CDK inhibitor, we believe that the National Cancer Institute's Cancer Therapy Evaluation Program, or CTEP, is continuing to enroll patients in a CTEP sponsored trial in patients with chronic leukemia. A number of companies are pursuing discovery and research activities in each of the other areas that are the subject of our research and drug development programs. We believe that AstraZeneca, Entremed, Merck, jointly with Vertex, Nerviano Medical Sciences, Pfizer, Rigel, Sunesis and Takeda-Millennium have commenced Phase 1 or Phase 2 clinical trials of Aurora kinase inhibitors in patients with advanced cancers. Several companies have reported selection of Aurora kinase inhibitor candidates for development and may have started or are expected to start clinical trials within the next twelve months. We believe that Boehringer Ingelheim, GlaxoSmithKline, Onconova and Nerviano Medical Sciences have commenced Phase 1 or Phase 2 clinical trials with Plk inhibitor candidates for oncology indications. For our ALIGN products, we believe that Beiersdorf, Daiichi-Sankyo, Eisai, Johnson & Johnson, MPM Medical and other companies market products for radiation dermatitis and xerostomia.

Our competitors, either alone or together with collaborators, may have substantially greater financial resources and research and development staff. Our competitors may also have more experience:

- developing drug candidates;
- conducting preclinical and clinical trials;
- obtaining regulatory approvals; and
- commercializing product candidates.

Our competitors may succeed in obtaining patent protection and regulatory approval and may market drugs before we do. If our competitors market drugs that are less expensive, safer, more effective or more convenient to administer than our potential drugs, or that reach the market sooner than our potential drugs, we may not achieve commercial success. Scientific, clinical or technical developments by our competitors may render our drug candidates obsolete or noncompetitive. We anticipate that we will face increased competition in the future as new companies enter the markets and as scientific developments progress. If our drug candidates obtain regulatory approvals, but do not compete effectively in the marketplace, our business will suffer.

The commercial success of the ALIGN products and our drug candidates depends upon their market acceptance among physicians, patients, healthcare providers and payors and the medical community.

It is necessary that our and our distribution partners' products, including Xclafit[®] Cream, Numoisyn[®] Liquid and Numoisyn[®] Lozenges achieve and maintain market acceptance. If our drug candidates are approved by the FDA or by another regulatory authority, the resulting drugs, if any, may not gain market acceptance among physicians, healthcare providers and payors, patients and the medical community. The degree of market acceptance of any of our approved drugs or devices will depend on a variety of factors, including:

- timing of market introduction, number and clinical profile of competitive drugs;
- our ability to provide acceptable evidence of safety and efficacy;
- relative convenience and ease of administration;
- cost-effectiveness;
- availability of coverage, reimbursement and adequate payment from health maintenance organizations and other third party payors;
- prevalence and severity of adverse side effects; and
- other potential advantages over alternative treatment methods.

If our drugs fail to achieve market acceptance, we may not be able to generate significant revenue and our business would suffer.

If we are unable to compete successfully in our market place, it will harm our business.

There are existing products in the marketplace that compete with our products. Companies may develop new products that compete with our products. Certain of these competitors and potential competitors have longer operating histories, substantially greater product development capabilities and financial, scientific, marketing and sales resources. Competitors and potential competitors may also develop products that are safer, more effective or have other potential advantages compared to our products. In addition, research, development and commercialization efforts by others could render our products obsolete or non-competitive. Certain of our competitors and potential competitors have broader product offerings and extensive customer bases allowing them to adopt aggressive pricing policies that would enable them to gain market share. Competitive pressures could result in price reductions, reduced margins and loss of market share. We could encounter potential customers that, due to existing relationships with our competitors, are committed to products offered by those competitors. As a result, those potential customers may not consider purchasing our products.

There is uncertainty related to coverage, reimbursement and payment by healthcare providers and payors for the ALIGN products and newly approved drugs, if any. The inability or failure to obtain or maintain coverage could affect our ability to market the ALIGN products and our future drugs and decrease our ability to generate revenue.

The availability and levels of coverage and reimbursement of newly approved drugs by healthcare providers and payors is subject to significant uncertainty. The commercial success of the ALIGN products and our drug candidates in both the United States and international markets is substantially dependent on whether third party coverage and reimbursement is available. The United States Centers for Medicare and Medicaid Services, health maintenance organizations and other third party payors in the United States, the European Union and other jurisdictions are increasingly attempting to contain healthcare costs by limiting both coverage and the level of reimbursement of new drugs and, as a result, they may not cover or provide adequate payment for our potential drugs. The ALIGN products and our drug candidates may not be considered cost-effective and reimbursement may not be available to consumers or may not be sufficient to allow the ALIGN products or our drug candidates to be marketed on a competitive basis. In some countries, pricing of prescription drugs is subject to government control. In such countries, pricing negotiations with governmental authorities can take three to 12 months or longer following application to the competent authorities. To obtain reimbursement or pricing approval in such countries may require conducting an additional clinical trial comparing the cost-effectiveness of the drug to other alternatives. In the United States, the Medicare Part D drug benefit implemented in 2006 will limit drug coverage through formularies and other cost and utilization management programs, while Medicare Part B limits drug payments to a certain percentage of average price or through restrictive payment policies of least costly alternatives and inherent reasonableness. Our business could be materially harmed if coverage, reimbursement or pricing is unavailable or set at unsatisfactory levels.

We may be exposed to product liability claims that may damage our reputation and we may not be able to obtain adequate insurance.

Because we conduct clinical trials in humans, we face the risk that the use of our drug candidates will result in adverse effects. We believe that we have obtained reasonably adequate product liability insurance coverage for our trials. We cannot predict, however, the possible harm or side effects that may result from our clinical trials. Such claims may damage our reputation and we may not have sufficient resources to pay for any liabilities resulting from a claim excluded from, or beyond the limit of, our insurance coverage.

As we market commercialized products through our ALIGN subsidiary we are exposed to additional risks of product liability claims. These risks exist even with respect to drugs and devices that are approved for commercial sale by the FDA or other regulatory authorities in the United States, the European Union or elsewhere and manufactured in facilities licensed and regulated by the FDA or other such regulatory authorities. We have secured limited product liability insurance coverage, but may not be able to maintain such insurance on acceptable terms with adequate coverage, or at a reasonable cost. There is also a risk that third parties that we have agreed to indemnify could incur liability. Even if we were ultimately successful in product liability litigation, the litigation would consume substantial amounts of our financial and managerial resources and may exceed insurance coverage creating adverse publicity, all of which would impair our ability to generate sales of the litigated product as well as our other potential drugs.

We may be subject to damages resulting from claims that our employees or we have wrongfully used or disclosed alleged trade secrets of their former employers.

Many of our employees were previously employed at universities or other biotechnology or pharmaceutical companies, including our competitors or potential competitors. Although no claims against us are currently pending, we may be subject to claims that these employees or we have inadvertently or otherwise used or disclosed trade secrets or other proprietary information of their former employers. Litigation may be necessary to defend against these claims. If we fail in defending such claims, in addition to paying monetary damages, we may lose valuable intellectual property rights or personnel. A loss of key research personnel or their work product could hamper or prevent our ability to commercialize certain potential drugs, which could severely harm our business. Even if we are successful in defending against these claims, litigation could result in substantial costs and be a distraction to management.

Defending against claims relating to improper handling, storage or disposal of hazardous chemical, radioactive or biological materials could be time consuming and expensive.

Our research and development involves the controlled use of hazardous materials, including chemicals, radioactive and biological materials such as chemical solvents, phosphorus and bacteria. Our operations produce hazardous waste products. We cannot eliminate the risk of accidental contamination or discharge and any resultant injury from those materials. Various laws and regulations govern the use, manufacture, storage, handling and disposal of hazardous materials. We may be sued for any injury or contamination that results from our use or the use by third parties of these materials. Compliance with environmental laws and regulations may be expensive, and current or future environmental regulations may impair our research, development and production efforts.

We may be required to defend lawsuits or pay damages in connection with the alleged or actual violation of healthcare statutes such as fraud and abuse laws, and our corporate compliance programs can never guarantee that we are in compliance with all relevant laws and regulations.

Our commercialization efforts in the United States are subject to various federal and state laws pertaining to promotion and healthcare fraud and abuse, including federal and state anti-kickback, fraud and false claims laws. Anti-kickback laws make it illegal for a manufacturer to offer or pay any remuneration in exchange for, or to induce, the referral of business, including the purchase of a product. The federal government has published many regulations relating to the anti-kickback statutes, including numerous safe harbors or exemptions for certain arrangements. False claims laws prohibit anyone from knowingly and willingly presenting, or causing to be presented for payment to third-party payers including Medicare and Medicaid, claims for reimbursed products or services that are false or fraudulent, claims for items or services not provided as claimed, or claims for medically unnecessary items or services.

Our activities relating to the sale and marketing of our products will be subject to scrutiny under these laws and regulations. It may be difficult to determine whether or not our activities, comply with these complex legal requirements. Violations are punishable by significant criminal and/or civil fines and other penalties, as well as the possibility of exclusion of the product from coverage under governmental healthcare programs, including Medicare and Medicaid. If the government were to investigate or make allegations against us or any of our employees, or sanction or convict us or any of our employees, for violations of any of these legal requirements, this could have a material adverse effect on our business, including our stock price. Our activities could be subject to challenge for many reasons, including the broad scope and complexity of these laws and regulations, the difficulties in interpreting and applying these legal requirements, and the high degree of prosecutorial resources

and attention being devoted to the biopharmaceutical industry and health care fraud by law enforcement authorities. During the last few years, numerous biopharmaceutical companies have paid multi-million dollar fines and entered into burdensome settlement agreements for alleged violation of these requirements, and other companies are under active investigation. Although we have developed and implemented corporate and field compliance programs as part of our commercialization efforts, we cannot assure you that we or our employees, directors or agents were, are or will be in compliance with all laws and regulations or that we will not come under investigation, allegation or sanction. In addition, we may be required to prepare and report product pricing-related information to federal and state governmental authorities, such as the Department of Veterans Affairs and under the Medicaid program. The calculations used to generate the pricing-related information are complex and require the exercise of judgment. If we fail to accurately and timely report product pricing-related information or to comply with any of these or any other laws or regulations, various negative consequences could result, including criminal and/or civil prosecution, substantial criminal and/or civil penalties, exclusion of the approved product from coverage under governmental healthcare programs including Medicare and Medicaid, costly litigation and restatement of our financial statements. In addition, our efforts to comply with this wide range of laws and regulations are, and will continue to be, time-consuming and expensive.

If we fail to enforce adequately or defend our intellectual property rights our business may be harmed.

Our commercial success depends in large part on obtaining and maintaining patent and trade secret protection for our drug candidates, the methods used to manufacture those drug candidates and the methods for treating patients using those drug candidates.

Specifically, sapacitabine is covered in granted, composition of matter patents that expire in 2014 in the US and 2012 outside the US. Sapacitabine is further protected by additional granted, composition of matter patents claiming certain, stable crystalline forms of sapacitabine and their pharmaceutical compositions and therapeutic uses that expire in 2022. In early development, amorphous sapacitabine was used. We have used one of the stable, crystalline forms of sapacitabine in nearly all our Phase 1 and in all of our Phase 2 clinical studies. We have also chosen this form for commercialization. Additional patents claim certain medical uses and formulations of sapacitabine which have emerged in our clinical trials. Seliciclib is protected by granted, composition of matter patents that expire in 2016. Additional patents claim certain medical uses which have emerged from our research programs.

Failure to obtain, maintain or extend the patents could adversely affect our business. We will only be able to protect our drug candidates and our technologies from unauthorized use by third parties to the extent that valid and enforceable patents or trade secrets cover them.

Our ability to obtain patents is uncertain because legal means afford only limited protections and may not adequately protect our rights or permit it to gain or keep any competitive advantage. Some legal principles remain unresolved and the breadth or interpretation of claims allowed in patents in the United States, the European Union or elsewhere can still be difficult to ascertain or predict. In addition, the specific content of patents and patent applications that are necessary to support and interpret patent claims is highly uncertain due to the complex nature of the relevant legal, scientific and factual issues. Changes in either patent laws or in interpretations of patent laws in the United States, the European Union or elsewhere may diminish the value of our intellectual property or narrow the scope of our patent protection. Our existing patents and any future patents we obtain may not be sufficiently broad to prevent others from practicing our technologies or from developing competing products and technologies. In addition, we generally do not control the patent prosecution of subject matter that we license from others and have not controlled the earlier stages of the patent prosecution. Accordingly, we are unable to exercise the same degree of control over this intellectual property as we would over our own.

Even if patents are issued regarding our drug candidates or methods of using them, those patents can be challenged by our competitors who may argue such patents are invalid and/or unenforceable. Patents also will not protect our drug candidates if competitors devise ways of making or using these product candidates without legally infringing our patents. The U.S. Federal Food, Drug and Cosmetic, or FD&C, Act and FDA regulations and policies and equivalents in other jurisdictions provide incentives to manufacturers to challenge patent validity or create modified, noninfringing versions of a drug in order to facilitate the approval of abbreviated new drug applications for generic substitutes. These same types of incentives encourage manufacturers to submit new drug applications that rely on

literature and clinical data not prepared for or by the drug sponsor.

Proprietary trade secrets and unpatented know-how are also very important to our business. We rely on trade secrets to protect our technology, especially where we do not believe that patent protection is appropriate or obtainable. However, trade secrets are difficult to protect. Our employees, consultants, contractors, outside scientific collaborators and other advisors may unintentionally or willfully disclose our confidential information to competitors, and confidentiality agreements may not provide an adequate remedy in the event of unauthorized disclosure of confidential information. Enforcing a claim that a third party obtained illegally and is using trade secrets is expensive and time consuming, and the outcome is unpredictable. Moreover, our competitors may independently develop equivalent knowledge, methods and know-how. Failure to obtain or maintain trade secret protection could adversely affect our competitive business position.

Intellectual property rights of third parties may increase our costs or delay or prevent us from being able to commercialize our drug candidates and/or the ALIGN products.

There is a risk that we are infringing or will infringe the proprietary rights of third parties because patents and pending applications belonging to third parties exist in the United States, the European Union and elsewhere in the world in the areas of our research and/or the ALIGN products. Others might have been the first to make the inventions covered by each of our or our licensors' pending patent applications and issued patents and might have been the first to file patent applications for these inventions. We are aware of several published patent applications, and understand that others may exist, that could support claims that, if granted, could cover various aspects of our developmental programs, including in some cases particular uses of our lead drug candidate sapacitabine, seliciclib or other therapeutic candidates, or gene sequences and techniques that we use in the course of our research and development. In addition, we understand that other applications and patents exist relating to potential uses of sapacitabine and seliciclib that are not part of our current clinical programs for these compounds. Numerous third-party United States and foreign issued patents and pending applications exist in the area of kinases, including CDK, AK and Plk for which we have research programs. For example, some pending patent applications contain broad claims that could represent freedom to operate limitations for some of our kinase programs should they be issued unchanged. Although we intend to continue to monitor these applications, we cannot predict what claims will ultimately be allowed and if allowed what their scope would be. In addition, because the patent application process can take several years to complete, there may be currently pending applications, unknown to us, which may later result in issued patents that cover the production, manufacture, commercialization or use of our drug candidates. If we wish to use the technology or compound claimed in issued and unexpired patents owned by others, we will need to obtain a license from the owner, enter into litigation to challenge the validity of the patents or incur the risk of litigation in the event that the owner asserts that we infringe its patents. In one case we have opposed a European patent relating to human aurora kinase and the patent has been finally revoked (no appeal was filed). We are also aware of a corresponding U.S. patent containing method of treatment claims for specific cancers using aurora kinase modulators which, if held valid, could potentially restrict the use of our aurora kinase inhibitors once clinical trials are completed.

There has been substantial litigation and other proceedings regarding patent and other intellectual property rights in the pharmaceutical and biotechnology industries. Defending against third party claims, including litigation in particular, would be costly and time consuming and would divert management's attention from our business, which could lead to delays in our development or commercialization efforts. If third parties are successful in their claims, we might have to pay substantial damages or take other actions that are adverse to our business. As a result of intellectual property infringement claims, or to avoid potential claims, we might:

- be prohibited from selling or licensing any product that we may develop unless the patent holder licenses the patent to us, which it is not required to do;
- be required to pay substantial royalties or grant a cross license to our patents to another patent holder;
- decide to move some of our screening work outside Europe;
- be required to pay substantial damages for past infringement, which we may have to pay if a court determines that our product candidates or technologies infringe a competitor's patent or other proprietary rights; or
- be required to redesign the formulation of a drug candidate so it does not infringe, which may not be possible or could require substantial funds and time.

The development programs for our two lead drug candidates are based in part on intellectual property rights we license from others, and any termination of those licenses could seriously harm our business.

We have in-licensed certain patent rights in connection with the development programs for each of our two lead drug candidates. Both of these license agreements impose payment and other material obligations on us. Under the Daiichi-Sankyo license, we are obligated to pay license fees, milestone payments and royalties. We are also obligated to use commercially reasonable efforts to commercialize products based on the licensed rights and to use reasonable efforts to obtain regulatory approval to sell the products in at least one country by September 2011, unless we have in-licensed certain patent rights in connection with the development programs for each of our two lead drug candidates. Under both of the license agreements relating to these drug candidates we are obligated to pay license fees, milestone payments and royalties. We are also obligated to use reasonable efforts to develop and commercialize products based on the licensed patents.

Pursuant to the Daiichi-Sankyo license under which we license sapacitabine, we are obligated to pay license fees, milestone payments and royalties, provide regular progress reports and use commercially reasonable efforts to commercialize products based on the licensed rights and obtain regulatory approval to sell the products in at least one country by September 2011, unless we are prevented from doing so by virtue of certain causes outside of our reasonable control, including but not limited to difficulties in patient recruitment into trials or significant, unexpected change in regulatory requirements affecting the development of our drug. Pursuant to the CNRS and Institut Curie license under which we license seliciclib, we are obligated to pay license fees, milestone payments and royalties and provide regular progress reports.

Although we are currently in compliance with all of our material obligations under these licenses, if we were to breach any such obligations our counterparties may be entitled to terminate the licenses. This would restrict or delay or eliminate our ability to develop and commercialize these drug candidates, which could adversely affect our business. With respect to seliciclib we hold a license from CNRS and Institut Curie under which we are obligated to pay license fees, milestone payments and royalties. We are obligated to use reasonable efforts to develop and commercialize products based on the licensed patents. Although we are currently in compliance with all of our material obligations under these licenses, if we were to breach any such obligations our counterparties could attempt to terminate the licenses and there can be no assurance as to what would constitute exceptional cause. This would restrict or delay or eliminate our ability to develop and commercialize these drug candidates, which could adversely affect our business.

Failure to achieve and maintain internal controls in accordance with Sections 302 and 404 of the Sarbanes-Oxley Act of 2002 could have a material adverse effect on our business and stock price.

We just recently completed a restatement of our financial statements and filed an amendment to our Annual Report of Form 10-K as and for the year ended December 31, 2009, in which we reported a material weakness for the year then ended with respect to the correct application of ASC 260, Earnings per Share, in calculating the net loss per common share as it relates to the dividends on our preferred stock. If we fail to maintain our internal controls or fail to implement required new or improved controls, as such control standards are modified, supplemented or amended from time to time, we may not be able to conclude on an ongoing basis that we have effective internal controls over financial reporting. Effective internal controls are necessary for us to produce reliable financial reports and are important in the prevention of financial fraud. If we cannot produce reliable financial reports or prevent fraud, our business and operating results could be harmed, investors may lose confidence in our reported financial information, and there could be a material adverse effect on our stock price.

We incur increased costs and management resources as a result of being a public company, and we still may fail to comply with public company obligations.

As a public company, we face and will continue to face increased legal, accounting, administrative and other costs and expenses as a public company that we would not incur as a private company. Compliance with the Sarbanes Oxley Act of 2002, as well as other rules of the SEC, the Public Company Accounting Oversight Board and the NASDAQ Global Market resulted in a significant initial cost to us as well as an ongoing compliance costs. As a public company,

we are subject to Section 404 of the Sarbanes Oxley Act relating to internal control over financial reporting. We completed, and later revisited, our formal process to evaluate our internal controls for purposes of Section 404. In performing this assessment, our management identified a deficiency in our internal controls over financial reporting that constitutes a material weakness under standards established by the Public Company Accounting Oversight Board, or PCAOB, as of December 31, 2009. Specifically, we did not have adequately designed controls in place to ensure the appropriate accounting for the dividends on our shares of preferred stock when calculating basic and diluted loss per share of common stock for year ended December 31, 2009. This lack of adequate control and an adequate risk assessment process resulted in our failure to identify and disclose the incorrect calculation of the net loss per share of our common stock. Due to this error, we concluded that the material weakness in internal control over financial reporting existed as of December 31, 2009. Solely as a result of this material weakness, management concluded that we did not maintain effective internal control over financial reporting as of December 31, 2009, based on the criteria established in *Internal Control Integrated Framework*, issued by the COSO and, consequently, we did not maintain effective internal control over reporting. As our business grows and changes, there can be no assurances that we can maintain the effectiveness of our internal controls over financial reporting.

Effective internal controls over financial reporting are necessary for us to provide reliable financial reports and, together with adequate disclosure controls and procedures, are designed to prevent fraud. If we cannot provide reliable financial reports or prevent fraud, our operating results could be harmed. We have completed a formal process to evaluate our internal control over financial reporting. However, guidance from regulatory authorities in the area of internal controls continues to evolve and substantial uncertainty exists regarding our on-going ability to comply by applicable deadlines. Any failure to implement required new or improved controls, or difficulties encountered in their implementation, could harm our operating results or cause us to fail to meet our reporting obligations. Ineffective internal controls could also cause investors to lose confidence in our reported financial information, which could have a negative effect on the trading price of our common stock.

Our common stock may have a volatile public trading price.

An active public market for our common stock has not developed. Our stock can trade in small volumes which may make the price of our stock highly volatile. The last reported price of our stock may not represent the price at which you would be able to buy or sell the stock. The market prices for securities of companies comparable to us have been highly volatile. Often, these stocks have experienced significant price and volume fluctuations for reasons that are both related and unrelated to the operating performance of the individual companies. In addition, the stock market as a whole and biotechnology and other life science stocks in particular have experienced significant recent volatility. Like our common stock, these stocks have experienced significant price and volume fluctuations for reasons unrelated to the operating performance of the individual companies. In addition, due to our existing stock price, we may not continue to qualify for continued listing on the NASDAQ Global Market. To maintain listing, we are required to maintain a minimum closing bid price of \$1.00 per share and, among other requirements, to maintain a minimum stockholders equity value of \$10 million. Factors giving rise to this volatility may include:

- disclosure of actual or potential clinical results with respect to product candidates we are developing;
- regulatory developments in both the United States and abroad;
- developments concerning proprietary rights, including patents and litigation matters;
- public concern about the safety or efficacy of our product candidates or technology, or related technology, or new technologies generally;
- concern about the safety or efficacy of our product candidates or technology, or related technology, or new technologies generally;
- public announcements by our competitors or others; and
- general market conditions and comments by securities analysts and investors.

Fluctuations in our operating losses could adversely affect the price of our common stock.

Our operating losses may fluctuate significantly on a quarterly basis. Some of the factors that may cause our operating losses to fluctuate on a period-to-period basis include the status of our preclinical and clinical development programs, level of expenses incurred in connection with our preclinical and clinical development programs, implementation or termination of collaboration, licensing, manufacturing or other material agreements with third parties, non-recurring revenue or expenses under any such agreement, and compliance with regulatory requirements. Period-to-period comparisons of our historical and future financial results may not be meaningful, and investors should not rely on them as an indication of future performance. Our fluctuating losses may fail to meet the expectations of securities analysts or investors. Our failure to meet these expectations may cause the price of our common stock to decline.

If securities or industry analysts do not publish research or reports about us, if they change their recommendations regarding our stock adversely or if our operating results do not meet their expectations, our stock price and trading volume could decline.

The trading market for our common stock is influenced by the research and reports that industry or securities analysts publish about us. If one or more of these analysts cease coverage of us or fail to regularly publish reports on us, we could lose visibility in the financial markets, which in turn could cause our stock price or trading volume to decline. Moreover, if one or more of the analysts who cover us downgrade our stock or if our operating results do not meet their expectations, our stock price could decline.

Anti-takeover provisions in our charter documents and provisions of Delaware law may make an acquisition more difficult and could result in the entrenchment of management.

We are incorporated in Delaware. Anti-takeover provisions of Delaware law and our amended and restated certificate of incorporation and amended and restated bylaws may make a change in control or efforts to remove management more difficult. Also, under Delaware law, our Board of Directors may adopt additional anti-takeover measures.

We have the authority to issue up to 5 million shares of preferred stock and to determine the terms of those shares of stock without any further action by our stockholders. If the Board of Directors exercises this power to issue preferred stock, it could be more difficult for a third party to acquire a majority of our outstanding voting stock and vote the stock they acquire to remove management or directors.

Our amended and restated certificate of incorporation and amended and restated bylaws also provides staggered terms for the members of our Board of Directors. Under Section 141 of the Delaware General Corporation Law, our directors may be removed by stockholders only for cause and only by vote of the holders of a majority of voting shares then outstanding. These provisions may prevent stockholders from replacing the entire board in a single proxy contest, making it more difficult for a third party to acquire control of us without the consent of our Board of Directors. These provisions could also delay the removal of management by the Board of Directors with or without cause. In addition, our directors may only be removed for cause and amended and restated bylaws limit the ability our stockholders to call special meetings of stockholders.

Under Section 203 of the Delaware General Corporation Law, a corporation may not engage in a business combination with any holder of 15% or more of its capital stock until the holder has held the stock for three years unless, among other possibilities, the Board of Directors approves the transaction. Our Board of Directors could use this provision to prevent changes in management. The existence of the foregoing provisions could limit the price that investors might be willing to pay in the future for shares of our common stock.

Certain severance-related agreements in our executive employment agreements may make an acquisition more difficult and could result in the entrenchment of management.

In March 2008 (as amended in December 2008 with respect to our President and Chief Executive Officer), we entered into employment agreements with our President and Chief Executive Officer and our Executive Vice President, Finance, Chief Financial Officer and Chief Operating Officer, which contain severance arrangements in the event that such executive's employment is terminated without cause or as a result of a change of control (as each such term is defined in each agreement). The financial obligations triggered by these provisions may prevent a business combination or acquisition that would be attractive to stockholders and could limit the price that investors would be willing to pay in the future for our stock.

In the event of an acquisition of our common stock, we cannot assure our common stockholders that we will be able to negotiate terms that would provide for a price equivalent to, or more favorable than, the price at which our shares of common stock may be trading at such time.

We may not effect a consolidation or merger with another entity without the vote or consent of the holders of at least a majority of the shares of our preferred stock (in addition to the approval of our common stockholders), unless the preferred stock that remains outstanding and its rights, privileges and preferences are unaffected or are converted into or exchanged for preferred stock of the surviving entity having rights, preferences and limitations substantially similar, but no less favorable, to our convertible preferred stock.

In addition, in the event a third party seeks to acquire our company or acquire control of our company by way of a merger, but the terms of such offer do not provide for our preferred stock to remain outstanding or be converted into or exchanged for preferred stock of the surviving entity having rights, preferences and limitations substantially similar, but no less favorable, to our preferred stock, the terms of the Certificate of Designation of our preferred stock provide for an adjustment to the conversion ratio of our preferred stock such that, depending on the terms of any such transaction, preferred stockholders may be entitled, by their terms, to receive up to \$10.00 per share in common stock, causing our common stockholders not to receive as favorable a price as the price at which such shares may be trading at the time of any such transaction. As of March 25, 2010, there were 1,923,413 shares of our preferred stock issued and outstanding. If the transaction were one in which proceeds were received by the Company for distribution to shareholders, and the terms of the Certificate of Designation governing the preferred stock were strictly complied with, approximately \$19,250,000 would be paid to the preferred holders before any distribution to the common stockholders, although the form of transaction could affect how the holders of preferred stock are treated. In such an event, although such a transaction would be subject to the approval of our holders of common stock, we cannot assure our common stockholders that we will be able to negotiate terms that would provide for a price equivalent to, or more favorable than, the price at which our shares of common stock may be trading at such time. Thus, the terms of our preferred stock might hamper a third party's acquisition of our company.

Our certificate of incorporation and bylaws and certain provisions of Delaware law may delay or prevent a change in our management and make it more difficult for a third party to acquire us.

Our amended and restated certificate of incorporation and bylaws contain provisions that could delay or prevent a change in our Board of Directors and management teams. Some of these provisions:

- authorize the issuance of preferred stock that can be created and issued by the Board of Directors without prior stockholder approval, commonly referred to as "blank check" preferred stock, with rights senior to those of our common stock;
- provide for the Board of Directors to be divided into three classes; and
- require that stockholder actions must be effected at a duly called stockholder meeting and prohibit stockholder action by written consent.

In addition, because we are incorporated in Delaware, we are governed by the provisions of Section 203 of the Delaware General Corporation Law, which limits the ability of large stockholders to complete a business combination with, or acquisition of, us. These provisions may prevent a business combination or acquisition that would be attractive to stockholders and could limit the price that investors would be willing to pay in the future for our stock. These provisions also make it more difficult for our stockholders to replace members of our Board of Directors. Because our Board of Directors is responsible for appointing the members of our management team, these provisions could in turn affect any attempt to replace our current management team. Additionally, these provisions may prevent an acquisition that would be attractive to stockholders and could limit the price that investors would be willing to pay in the future for our common stock.

We may have limited ability to pay cash dividends on the convertible preferred stock.

Delaware law may limit our ability to pay cash dividends on the convertible preferred stock. Under Delaware law, cash dividends on our convertible preferred stock may only be paid from surplus or, if there is no surplus, from the corporation's net profits for the current or preceding fiscal year. Delaware law defines "surplus" as the amount by which the total assets of a corporation, after subtracting its total liabilities, exceed the corporation's capital, as determined by its Board of Directors. Since we are not profitable, our ability to pay cash dividends will require the availability of adequate surplus. Even if adequate surplus is available to pay cash dividends on the convertible preferred stock, we may not have sufficient cash to pay dividends on the convertible preferred stock or we may choose not to declare the dividends. If that was to happen, holders of preferred stock would be granted certain additional rights until such dividends were paid.

If we continue not to declare the quarterly dividends on our 6% Convertible Exchangeable Preferred Stock for a total of six quarterly dividend periods, we will have to grant additional rights to our holders of Preferred Stock with respect to the management of the Company.

On April 6, 2009, June 22, 2009, October 19, 2009 and January 7, 2010, our Board of Directors decided not to declare payment of the quarterly cash dividend on the Company's 6% Convertible Exchangeable Preferred Stock, or the Preferred Stock, scheduled for May 1, 2009, August 1, 2009, November 1, 2009 and February 1, 2010, respectively. To the extent that any dividends payable on the Preferred Stock are not paid, such unpaid dividends are accumulated. However, we did not declare dividends on the Preferred Stock for four quarterly dividend periods and if we fail to declare dividends on the Preferred Stock for six quarterly dividend periods (whether or not consecutive), the size of our Board of Directors will be increased by two and the holders of the Preferred Stock will have the right to vote to fill the two vacancies created thereby until we pay all accumulated and unpaid dividends. Although our Board of Directors will continue to evaluate the payment of a quarterly cash dividend on a quarterly basis, we cannot assure you that we will be able to continue to pay the dividends and that holders of our Preferred Stock will not be granted additional rights with respect to our management.

Our common and convertible preferred stock may experience extreme price and volume fluctuations, which could lead to costly litigation for the Company and make an investment in the Company less appealing.

The market price of our common and convertible preferred stock may fluctuate substantially due to a variety of factors, including:

- additions to or departures of our key personnel;
- announcements of technological innovations or new products or services by us or our competitors;
- announcements concerning our competitors or the biotechnology industry in general;
- new regulatory pronouncements and changes in regulatory guidelines;
- general and industry-specific economic conditions;
- changes in financial estimates or recommendations by securities analysts;
- variations in our quarterly results;
- announcements about our collaborators or licensors; and
- changes in accounting principles.

The market prices of the securities of biotechnology companies, particularly companies like us without product revenues and earnings, have been highly volatile and are likely to remain highly volatile in the future. This volatility has often been unrelated to the performance of particular companies. In the past, companies that experience volatility in the market price of their securities have often faced securities class action litigation. Moreover, market prices for stocks of biotechnology-related and technology companies frequently reach levels that bear no relationship to the performance of these companies. These market prices generally are not sustainable and are highly volatile. Whether or not meritorious, litigation brought against us could result in substantial costs, divert our management's attention and resources and harm our financial condition and results of operations. In addition, due to our stock price from time to time, we may not continue to qualify for continued listing on the NASDAQ Global Market. Please see Risk Factor: *Our common stock may have a volatile public trading price.*

The future sale of our common and preferred stock and future issuances of our common stock upon conversion of our preferred stock, could negatively affect our stock price.

If our common or preferred stockholders sell substantial amounts of our stock in the public market, or the market perceives that such sales may occur, the market price of our common and preferred stock could fall. For example, we were approached by a preferred stockholder that elected to convert 123,400 of its shares of preferred stock, which shares were converted into 239,396 shares of common stock effective March 16, 2010. Thus if additional holders of preferred stock elect to convert their shares to shares of common stock at renegotiated prices, such conversion as well as the sale of substantial amounts of our common or preferred stock, could cause dilution to existing holders of our common stock, thereby also negatively affecting the price of our common stock.

If we exchange the convertible preferred stock for debentures, the exchange will be taxable but we will not provide any cash to pay any tax liability that any convertible preferred stockholder may incur.

An exchange of convertible preferred stock for debentures, as well as any dividend make-whole or interest make-whole payments paid in our common stock, will be taxable events for United States federal income tax purposes, which may result in tax liability for the holder of convertible preferred stock without any corresponding receipt of cash by the holder. In addition, the debentures may be treated as having original issue discount, a portion of which would generally be required to be included in the holder's gross income even though the cash to which such income is attributable would not be received until maturity or redemption of the debenture. We will not distribute any cash to the holders of the securities to pay these potential tax liabilities.

If we automatically convert the convertible preferred stock, there is a substantial risk of fluctuation in the price of our common stock from the date we elect to automatically convert to the conversion date.

We may automatically convert the convertible preferred stock into common stock if the closing price of our common stock has exceeded \$35.30. There is a risk of fluctuation in the price of our common stock between the time when we may first elect to automatically convert the preferred and the automatic conversion date.

We do not intend to pay cash dividends on our common stock in the foreseeable future.

We do not anticipate paying cash dividends on our common stock in the foreseeable future. Any payment of cash dividends will depend on our financial condition, results of operations, capital requirements, the outcome of the review of our strategic alternatives and other factors and will be at the discretion of our Board of Directors.

Accordingly, investors will have to rely on capital appreciation, if any, to earn a return on their investment in our common stock. Furthermore, we may in the future become subject to contractual restrictions on, or prohibitions against, the payment of dividends.

The number of shares of common stock which are registered, including the shares to be issued upon exercise of our outstanding warrants, is significant in relation to our currently outstanding common stock and could cause downward pressure on the market price for our common stock.

The number of shares of common stock registered for resale, including those shares which are to be issued upon exercise of our outstanding warrants, is significant in relation to the number of shares of common stock currently outstanding. If the security holder determines to sell a substantial number of shares into the market at any given time, there may not be sufficient demand in the market to purchase the shares without a decline in the market price for our common stock. Moreover, continuous sales into the market of a number of shares in excess of the typical trading volume for our common stock, or even the availability of such a large number of shares, could depress the trading market for our common stock over an extended period of time.

If persons engage in short sales of our common stock, including sales of shares to be issued upon exercise of our outstanding warrants, the price of our common stock may decline.

Selling short is a technique used by a stockholder to take advantage of an anticipated decline in the price of a security. In addition, holders of options and warrants will sometimes sell short knowing they can, in effect, cover through the exercise of an option or warrant, thus locking in a profit. A significant number of short sales or a large volume of other sales within a relatively short period of time can create downward pressure on the market price of a security. Further sales of common stock issued upon exercise of our outstanding warrants could cause even greater declines in the price of our common stock due to the number of additional shares available in the market upon such exercise, which could encourage short sales that could further undermine the value of our common stock. You could, therefore, experience a decline in the value of your investment as a result of short sales of our common stock.

Our distribution rights to the ALIGN products are licensed from others, and any termination of that license could harm our business.

We have in-licensed from Sinclair the distribution rights to the ALIGN products. This license agreement imposes obligations on us. Although we are currently in compliance with all of our material obligations under this license, if we were to breach any such obligations, Sinclair would be permitted to terminate the license. This would restrict us from distributing the ALIGN products.

If our supplier upon whom we rely fails to produce on a timely basis the finished goods in the volumes that we require or fails to meet quality standards and maintain necessary licensure from regulatory authorities, we may be unable to meet demand for our products, potentially resulting in lost revenues.

Our licensor and supplier Sinclair contracts with third party manufacturers to supply the finished goods to us to meet our needs. If any of Sinclair's third party manufacturers service providers do not meet our or our licensor's requirements for quality, quantity or timeliness, or do not achieve and maintain compliance with all applicable regulations, demand for our products or our ability to continue supplying such products could substantially decline. As the third party manufacturers are the sole supplier of the products any delays may impact our sales.

In all the countries where we sell or may sell our products, governmental regulations exist to define standards for manufacturing, packaging, labeling and storing. All of our suppliers of raw materials and contract manufacturers must comply with these regulations. Failure to do so could result in supply interruptions. In the United States, the FDA requires that all suppliers of pharmaceutical bulk material and all manufacturers of pharmaceuticals for sale in or from the United States achieve and maintain compliance with the FDA's Current Good Manufacturing Practice or cGMP regulations and guidelines. Failure of our third-party manufacturers to comply with applicable regulations could result in sanctions being imposed on them or us, including fines, injunctions, civil penalties, disgorgement, suspension or withdrawal of approvals, license revocation, seizures or recalls of products, operating restrictions and criminal prosecutions, any of which could significantly and adversely affect supplies of our products. In addition, before any product batch produced by our manufacturers can be shipped, it must conform to release specifications pre-approved by regulators for the content of the pharmaceutical product. If the operations of one or more of our manufacturers were to become unavailable for any reason, any required FDA review and approval of the operations of an alternative supplier could cause a delay in the manufacture of our products.

Our customer base is highly concentrated.

Our principal customers are a small number of wholesale drug distributors. These customers comprise a significant part of the distribution network for pharmaceutical products in the United States. Three large wholesale distributors, AmerisourceBergen Corporation, Cardinal Health, Inc. and McKesson Corporation, control a significant share of the market in the United States. Our ability to distribute any product, including Xclair[®] Cream, Numoisyn[®] Liquid and Numoisyn[®] Lozenges and to recognize revenues on a timely basis is substantially dependent on our ability to maintain commercially reasonable agreements with each of these wholesale distributors and the extent to which these distributors, over whom we have no control, comply with such agreements. Our agreements with wholesaler distributors may contain terms that are not favorable, given our relative lack of market leverage as a company with only three approved products or other factors, which could adversely affect our commercialization of Xclair[®] Cream, Numoisyn[®] Liquid and Numoisyn[®] Lozenges. The loss of any of these customers could materially and adversely affect our ability to distribute our products, resulting in a negative impact on our operations and financial condition.

We may be unable to accurately estimate demand and monitor wholesaler inventory of Xclair[®] Cream, Numoisyn[®] Liquid or Numoisyn[®] Lozenges. Although we attempt to monitor wholesaler inventory of Xclair[®] Cream, Numoisyn[®] Liquid or Numoisyn[®] Lozenges, we also rely on third party information, which is inherently uncertain and may not be accurate, to assist us in monitoring estimated inventory levels and prescription trends. Inaccurate estimates of the demand and inventory levels of the product may cause our revenues to fluctuate significantly from quarter to quarter and may cause our operating results for a particular quarter to be below expectations.

Inventory levels of Xclair[®] Cream, Numoisyn[®] Liquid or Numoisyn[®] Lozenges held by wholesalers can also cause our operating results to fluctuate unexpectedly. For the years ended December 31, 2008 and 2009, approximately 85% and 86%, respectively, of our product sales in the United States were to three wholesalers, Cardinal Health, Inc., McKesson Corporation and AmerisourceBergen. Inventory levels held by those wholesalers can cause our operating results to fluctuate unexpectedly if our sales to wholesalers do not match end user demand. We have entered into inventory management agreements with these U.S. wholesalers under which they provide us with data regarding inventory levels at these wholesalers. However, these wholesalers may not be completely effective in matching inventory levels to end user demand, as they make estimates to determine end user demand. In addition, inventory is held at retail pharmacies and other non-wholesaler locations, for which we have no inventory management agreements and have no control in respect to their buying patterns. Also, the non-retail sector in the United States, which includes

government institutions and large health maintenance organizations, tends to be less consistent in terms of buying patterns, and often causes quarter-over-quarter fluctuations in inventory and ordering patterns. We attempt to monitor inventory of Xclair[®], Numoisyn[®] Liquid or Numoisyn[®] Lozenges in the United States through the use of internal sales forecasts and the expiration dates of product shipped, among other factors.

The commercialization of our products is substantially dependent on our ability to develop effective sales and marketing capabilities.

Our successful commercialization of Xclair[®] Cream, Numoisyn[®] Liquid and Numoisyn[®] Lozenges in the United States will depend on our ability to establish and maintain an effective sales and marketing organization in the United States. We hired trained and deployed additional marketing personnel and a small oncology specialty sales force. We may increase or decrease the size of our sales force in the future, depending on many factors, including the effectiveness of the sales force, the level of market acceptance of Xclair[®] Cream, Numoisyn[®] Liquid and Numoisyn[®] Lozenges and the results of our clinical trials. Prior to our launches of these products, we had never sold or marketed any products.

For our product candidates currently under development, our strategy is to develop compounds through the Phase 2 stage of clinical testing and market or co-promote certain of our drugs on our own. We have limited sales, marketing or distribution capabilities. We will depend primarily on strategic alliances with third parties, which have established distribution systems and sales forces, to commercialize our drugs. To the extent that we are unsuccessful in commercializing any drugs or devices ourselves or through a strategic alliance, product revenues will suffer, we will incur significant additional losses and our share price will be negatively affected.

PART II

Item 6. Selected Financial Data

This section presents our historical financial data. The consolidated statement of operations data for the years ended December 31, 2007, 2008, 2009 and for the period from August 13, 1996 (inception) to December 31, 2009 and the consolidated balance sheet data as of December 31, 2008 and 2009 have been derived from our audited financial statements included elsewhere in this Annual Report on Form 10-K. The statement of operations data for the years ended 2005 and 2006 and the balance sheet data as of December 31, 2005, 2006 and 2007 have been derived from our audited financial statements that are not included in this Annual Report on Form 10-K. Historical results are not necessarily indicative of future results.

The information contained in the following tables should be read in conjunction with Management's Discussion and Analysis of Financial Condition and Results of Operations and the financial statements included in this Annual Report on Form 10-K.

	Years Ended December 31,					Period from August 13, 1996 (inception) to December 31, 2009 ⁽¹⁾
	2005	2006	2007 ⁽¹⁾	2008 ⁽¹⁾	2009 ⁽¹⁾	2009 ⁽¹⁾
	(in thousands)					
Consolidated Statements of Operations:						
Revenues:						
Collaboration and research and development income	\$ 245	\$ 231	\$ 10	\$	\$	\$ 3,000
Product revenue				838	910	1,748

In connection with the stock purchase agreement entered into with Xcyte Therapies Inc. or Xcyte in March 2006, Cyclacel Limited was considered to be the acquiring company for accounting purposes. Accordingly, the assets and liabilities of Xcyte were recorded, as of March 27, 2006, at their respective fair values and added to those of Cyclacel Limited. The results of operations and balance sheet data for 2006 reflect the results of the combined companies from March 28, 2006 through December 31, 2006. Additionally, the historical results of operations and balance sheet data shown for comparative purposes in this Annual Report on Form 10-K reflect those of Cyclacel Limited prior to the reverse acquisition.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations
Cautionary Statement Regarding Forward-Looking Statements

This report contains certain statements that may be deemed forward-looking statements within the meaning of United States securities laws. All statements, other than statements of historical fact, that address activities, events or developments that we intend, expect, project, believe or anticipate will or may occur in the future are forward-looking statements. Such statements are based upon certain assumptions and assessments made by our management in light of their experience and their perception of historical trends, current conditions, expected future developments and other factors they believe to be appropriate. Certain factors that could cause results to differ materially from those projected or implied in the forward looking statements are set forth in this Annual Report on Form 10-K for the year ended December 31, 2009 under the caption Item 1A Risk factors

We encourage you to read those descriptions carefully. We caution you not to place undue reliance on the forward-looking statements contained in this report. These statements, like all statements in this report, speak only as of the date of this report (unless an earlier date is indicated) and we undertake no obligation to update or revise the statements except as required by law. Such forward-looking statements are not guarantees of future performance and actual results will likely differ, perhaps materially, from those suggested by such forward-looking statements.

Overview

We are a diversified biopharmaceutical business dedicated to the discovery, development and commercialization of novel, mechanism- targeted drugs to treat cancer and other serious disorders. We are focused on delivering leading edge therapeutic management of cancer patients based on a clinical development pipeline of novel drug candidates. Our core area of expertise, and a foundation of the Company since our inception, is in cell cycle biology; the processes by which cells divide and multiply. We focus primarily on the discovery and development of orally available anticancer agents that target the cell cycle with the aim of slowing the progression or shrinking the size of tumors, and enhancing the quality of life and improving survival rates of cancer patients.

Our clinical development priorities are focused on sapacitabine in the following indications:

- Acute myeloid leukemia, or AML in the elderly;
- Myelodysplastic syndromes, or MDS; and
- Non-small cell lung cancer or NSCLC.

We have ongoing clinical programs in development which are currently pending availability of data. Once data become available and are reviewed, we will determine the feasibility of pursuing further development and/or partnering these assets, including sapacitabine in combination with seliciclib, seliciclib in NSCLC and nasopharyngeal cancer, or NPC, and CYC116. In addition, we market directly in the United States Xclair[®] Cream for radiation dermatitis and Numoisyn[®] Liquid and Numoisyn[®] Lozenges for xerostomia.

Our core area of expertise is in cell cycle biology and we focus primarily on the development of orally available anticancer agents that target the cell cycle with the aim of slowing the progression or shrinking the size of tumors, and enhancing the quality of life and improving survival rates of cancer patients. We are generating several families of anticancer drugs that act on the cell cycle including nucleoside analogues, cyclin dependent kinase or CDK inhibitors and Aurora kinase/Vascular Endothelial Factor Receptor 2 or AK/VEGFR2 inhibitors. Although a number of pharmaceutical and biotechnology companies are currently attempting to develop nucleoside analogues, CDK inhibitor and AK inhibitor drugs, we believe that our drug candidates are differentiated in that they are orally available and interact with unique target profiles and mechanisms. For example we believe that our sapacitabine is the only orally available nucleoside analogue presently being tested in Phase 2 trials in AML and MDS and seliciclib is the only orally available CDK inhibitor currently in Phase 2 trials. Although our resources are primarily directed towards advancing our anticancer drug candidate sapacitabine through in-house development activities we are also progressing, but with lower levels of investment than in previous years, our other novel drug series which are at earlier stages. As a consequence of our focus on sapacitabine clinical development and related cost reduction program, research and development expenditures for the year ended December 31, 2009 were reduced by \$9.1 million, or 48%, to \$9.8 million compared to \$18.9 million for the year ended December 31, 2008.

We have worldwide rights to commercialize sapacitabine, seliciclib and CYC116 and our business strategy is to enter into selective partnership arrangements with these programs. Taken together, our pipeline covers all four phases of the cell cycle, which we believe will improve the chances of successfully developing and commercializing novel drugs that work on their own or in combination with approved conventional chemotherapies or with other targeted drugs to treat human cancers.

Our corporate headquarters is located in Berkeley Heights, New Jersey, with a research facility located in Scotland. From our inception in 1996 through December 31, 2009, we have devoted substantially all our efforts and resources to our research and development activities. We have incurred significant net losses since inception. As of December 31, 2009, our accumulated deficit during the development stage was approximately \$222.3 million. We expect to continue incurring substantial losses for the next several years as we continue to develop our clinical and pre-clinical drug candidates. Our operating expenses comprise research and development expenses and selling and general and administrative expenses.

To date, we have not generated significant product revenue but have financed our operations and internal growth through private placements, registered direct financings, licensing revenue, interest on investments, government grants and research and development tax credits. Prior to October 2007, our revenue consisted of collaboration and grant revenue. We did not start recognizing sales from our commercial products until 2008. We have recognized revenues from inception through December 31, 2009 totaling approximately \$8.4 million of which approximately \$3.0 million is derived from fees under collaborative agreements, approximately \$3.6 million of grant revenue from various United Kingdom government grant awards and approximately \$1.8 million from product sales. We have also recognized amounts receivable from the United Kingdom's tax authority, H.M. Revenue & Customs of \$17.2 million for research and development tax credits since inception.

Recent Events

On January 27, 2010, we announced that The NASDAQ Global Market, or NASDAQ, had notified us that we regained compliance with the minimum \$50 million market value of listed securities requirement and that we currently comply with all other applicable standards for continued listing on NASDAQ.

On January 25, 2010, we completed the sale of 2,350,000 units in a registered direct offering at a purchase price of \$2.50 per unit to certain existing institutional investors of the Company for approximately \$5.9 million in gross proceeds. Each unit consisted of one share of our common stock and one warrant to purchase 0.30 of one share of our common stock. The warrants have a five-year term from the date of issuance, are exercisable beginning six months from the date of issuance and will be exercisable at an exercise price of \$2.85 per share of common stock.

On January 13, 2010, we completed the sale of 2,850,000 units in a registered direct offering to certain institutional investors. Each unit was sold at a purchase price of \$2.51 per unit and consists of one share of our common stock and one warrant to purchase 0.25 of one share of our common stock totaling approximately \$7.2 million in gross proceeds. The warrants have a five-year term from the date of issuance, are exercisable beginning six months from the date of issuance and will be exercisable at an exercise price of \$3.26 per share of common stock.

On January 7, 2010, the Board of Directors of Cyclacel decided not to declare the quarterly cash dividend on the Company's 6% Convertible Exchangeable Preferred Stock, or Preferred Stock, with respect to the fourth quarter of 2009 that would have otherwise been payable on February 1, 2010. As previously disclosed, the Board also did not declare the quarterly cash dividend with respect to the first, second and third quarters of 2009. To the extent that any dividends payable on the Preferred Stock are not paid, such unpaid dividends are accrued. This is the fourth quarterly dividend that we have not declared and if we fail to pay dividends for at least six quarters (whether or not consecutive) on the Preferred Stock, the size of our Board of Directors could be increased by two members and the holders of the Preferred Stock, voting separately as a class, will have the right to vote to fill the two vacancies created thereby until all accrued but unpaid dividends have been paid in full, at which time such right is terminated.

During January and February 2010, we issued 2,618,266 shares of our common stock for gross proceeds of approximately \$2.6 million through the exercise of warrants. In addition, we completed a draw down from our CEFF under which we issued 1,563,208 shares for proceeds of approximately \$3.1 million.

During March 2010, we issued 239,396 shares of our common stock to a stockholder in exchange for the stockholder's delivery to us of 123,400 shares of our outstanding Preferred Stock.

Results of Operations

In connection with the stock purchase agreement entered into with Xcyte in March 2006, Cyclacel Limited was considered to be the acquiring company for accounting purposes. Accordingly, the assets and liabilities of Xcyte were recorded, as of March 27, 2006, at their respective fair values and added to those of Cyclacel Limited. The results of operations and balance sheet data for 2006 reflect the results of the combined companies from March 28, 2006 through December 31, 2006. Additionally, the historical results of operations and balance sheet data shown for comparative purposes in this Annual Report on Form 10-K reflect those of Cyclacel Limited prior to the reverse acquisition.

In connection with the asset purchase agreement with ALIGN, Cyclacel recorded the assets and liabilities of ALIGN at fair value on October 5, 2007. The results of operations and balance sheet data for 2007 reflect the results of the combined companies from October 5, 2007 through December 31, 2007.

Years ended December 31, 2008 and 2009 compared to years ended December 31, 2007 and 2008, respectively.

Revenues

The following table summarizes the components of our revenues for the years ended December 31, 2007, 2008 and 2009:

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Collaboration and research and development revenue	\$ 10	\$	\$	\$ (10)	\$	(100)%	%
Product Revenue		838	910	838	72	100%	9%
Grant revenue	119	39	1	(80)	(38)	(67)%	(97)%
Total revenue	\$ 129	\$ 877	\$ 911	\$ 748	\$ 34	580%	4%

Collaboration and research and development revenue is derived from several agreements under which the Company provides compounds for evaluation for an agreed consideration. No revenue was recognized under collaborative agreements during 2008 and 2009.

Product revenue is derived from the sale of Xclair® Cream, Numoisyn® Liquid and Numoisyn® Lozenges following the ALIGN asset acquisition on October 5, 2007. During the years ended December 31, 2008 and 2009, we recognized

approximately \$0.8 million and \$0.9 million, respectively in accordance with our revenue recognition policy.

Grant revenue is recognized as we incur and pay for qualifying costs and services under the applicable grant. Grant revenue is primarily derived from various United Kingdom government grant awards. Grant revenue decreased by 97% from \$39,000 for the year ended December 31, 2008 to approximately \$1,000 for the year ended December 31, 2009. This was as a result of finalization of a three year European Union grant which concluded in 2009.

The future

This was the second full year of ALIGN product sales since we acquired ALIGN in October 2007. We expect to continue to grow the sales of ALIGN products in 2010 through the support of a small sales force infrastructure and marketing efforts. We expect that grant revenue will decrease as we focus our expenditure on the advancement of sapacitabine, which is currently waiting to advance into a Phase 3 clinical trial, and away from grant qualifying research expenditure.

Cost of goods sold

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Cost of goods sold	\$	\$ 429	\$ 545	\$ 429	\$ 116	100%	27%

Total cost of sales represented 51% and 60%, respectively, of product revenue for the years ended December 31, 2008 and 2009. During 2009, we included an inventory provision of approximately \$0.1 million based upon current inventory levels, expiration dates, and future sales. Excluding the inventory provision, the cost of sales for the year ended December 31, 2009 represented 45% of product revenues and in the future we expect to maintain a similar margin level as we incurred in 2009.

Research and development expenses

To date, we have focused on drug discovery and development programs, with particular emphasis on orally available anticancer agents and our research and development expenses have represented costs incurred to discover and develop novel small molecule therapeutics, including clinical trial costs for sapacitabine, seliciclib, sapacitabine in combination with seliciclib and CYC116. We have also incurred costs in the advancement of product candidates toward clinical and pre-clinical trials and the development of in-house research to advance our biomarker program and technology platforms. However, during 2008 and 2009, in response to changing market conditions, we extensively reduced or stopped expenditure on development and preclinical activities outside of our core focus on sapacitabine. The benefit of these cost reductions was realized in 2009 and will be also be realized in 2010. We expense all research and development costs as they are incurred. Research and development expenses primarily include:

- clinical trial and regulatory-related costs;
- payroll and personnel-related expenses, including consultants and contract research;
- preclinical studies and laboratory supplies and materials;
- technology license costs; and
- rent and facility expenses for our laboratories.

The following table provides information with respect to our research and development expenditure for the years ended December 31, 2007, 2008 and 2009:

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Sapacitabine	\$ 3,326	\$ 6,601	\$ 7,001	\$ 3,275	\$ 400	98%	6%
Seliciclib	3,270	2,906	(84)	(364)	(2,990)	(11)%	(103)%
CYC116	2,626	1,695	162	(931)	(1,533)	(35)%	(90)%
Other costs related to research and development programs, management and exploratory research	10,347	7,667	2,687	(2,680)	(4,980)	(26)%	(65)%
Total research and development expenses	\$ 19,569	\$ 18,869	\$ 9,766	\$ (700)	\$ (9,103)	(4)%	\$ (9,103)

Research and development expenses represented 59%, 44% and 51% of our operating expenses for the years ended December 31, 2007, 2008 and 2009, respectively. Included in research and development expenses is stock-based compensation of approximately \$0.8 million, \$0.7 million and \$0.3 million for the years ended December 31, 2007, 2008 and 2009, respectively.

Fiscal 2009 as compared to fiscal 2008. Research and development costs decreased by 51%, or approximately \$9.1 million, from approximately \$18.9 million for the year ended December 31, 2008 to approximately \$9.8 million for the year ended December 31, 2009. Starting in September 2008 with our announced cost containment efforts, we reduced or eliminated costs of all programs other than the sapacitabine clinical trials, and as of result, the research and development costs were reduced by approximately \$9.5 million in 2009 from 2008. The sapacitabine program increased by approximately \$0.2 million due to the increase in clinical trial costs of running the AML and MDS programs.

Fiscal 2008 as compared to fiscal 2007. Research and development costs decreased by 4%, or approximately \$0.7 million, from approximately \$19.6 million for the year ended December 31, 2007 to approximately \$18.9 million for the year ended December 31, 2008. The sapacitabine program increased by approximately \$3.3 million relating to the increased clinical trial activities, in particular the commencement of the Phase 2 trial in elderly AML in December 2007, the expansion of the trial to explore myelodysplastic syndromes, as well as additional pre-clinical efforts and product scale-up. This has been offset by cost reductions in other programs and cost savings from the workforce reduction in September 2008 to allow us to concentrate on the advancement of sapacitabine. The increase in strength of the U.S. dollar against the British Pound has also contributed to lower research and development expenses being recognized on the consolidated statement of operations for the year ended December 31, 2008 as compared to the year ended December 31, 2007.

The future

Following our reduction of expenditure in 2008 and 2009 in our non-core research and development programs, we have concentrated our resources on the development of sapacitabine in three indications. We anticipate that overall research and development expenditures in 2010 will be similar to 2009 levels.

Selling, general and administrative expenses

Selling, general and administrative expenses include costs for sales and marketing operations, administrative personnel, legal and other professional expenses and general corporate expenses. The following table summarizes the

total selling, general and administrative expenses for the years ended December 31, 2007, 2008 and 2009:

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Total selling, general and administrative expenses	\$ 12,033	\$ 15,354	\$ 8,538	\$ 3,321	\$ (6,816)	28%	(44)%

Total selling, general and administrative expenses represented 36%, 36% and 44 % of our operating expenses for the years ended December 31, 2007, 2008 and 2009, respectively.

Fiscal 2009 as compared to fiscal 2008. Selling, general and administrative expenditure decreased by 44%, or \$6.8 million, from approximately \$15.4 million for the year ended December 31, 2008 to approximately \$8.5 million for the year ended December 31, 2009. This was as a result of cost saving measures first established in September 2008 and then during the second and third quarters of 2009. The cost savings resulted from reductions in employment related costs of \$2.6 million, intellectual property expenditures of \$1.3 million, stock-based compensation expenses of \$0.5 million, professional fees of \$0.5 million, investor relations of \$0.2 million, information technology costs of \$0.2 million and travel costs of \$0.1 million. Additionally, sales and marketing costs related to ALIGN in 2009 were reduced by \$0.1 million compared to 2008, which included one-time business launch costs not repeated in 2009. During 2008, a charge for amortization of intangibles of \$0.7 million with no corresponding charge in 2009 was recognized as the intangible assets were impaired during the third quarter of 2008.

Fiscal 2008 as compared to fiscal 2007. Selling, general and administrative expenditure increased 28% or \$3.3 million to approximately \$15.3 million for the year ended December 31, 2008 from approximately \$12.0 million for the year ended December 31, 2007, primarily attributable to the sales operations of ALIGN. Included within the expense of \$15.3 million for the year ended December 31, 2008 are approximately \$2.3 million of costs in respect of the support and development of ALIGN's commercial operations and sales and marketing, reflecting the fact that 2008 is the first full year of reporting for the ALIGN business following its acquisition in October 2007. In addition, \$0.7 million of intangible asset amortization charges were recognized prior to the intangible asset impairment. Included in selling, general and administrative expenses is stock compensation of approximately \$0.9 million and \$1.0 million for the years ended December 31, 2007 and 2008, respectively.

The future

Following our reduction in expenditure in 2008 and 2009, we expect our selling, general and administrative expenditures in 2010 to remain at the same levels as in 2009 or be lower.

Goodwill and intangible asset impairment

The following table summarizes the goodwill and intangibles impairment charges for the years ended December 31, 2007, 2008 and 2009:

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Goodwill and intangibles impairment	\$	\$ 7,934	\$	\$ 7,934	\$ (7,934)	100%	(100)%

In September 2008, the goodwill acquired in the Xcyte transaction was written down in full and we recorded an impairment charge of approximately \$2.7 million in accordance with Accounting Standard Codification, or ASC, 350 Intangibles Goodwill and Other, or ASC 350. This impairment charge was identified through our annual impairment review process and was triggered primarily by a decline in our stock price that reduced our market capitalization below book value of the net assets of the Xcyte reporting unit. Our reduced market capitalization reflected the general decline in the economic environment.

Intangible assets acquired in the ALIGN transaction were also fully written down in September 2008, in accordance with Accounting Standard Codification, Codification Topic 360, entitled Property, Plant and Equipment, or ASC 360. An impairment charge of approximately \$3.6 million was identified through our annual impairment review process and was recognized on the consolidated statement of operations. This one-time non-cash charge was triggered by a downwards revision of our projected net cash flows from product sales, required due to budgetary constraints experienced by health care providers and restrictions of the cost reimbursement regime. As a result, the sum of the expected undiscounted cash flows was less than the carrying amount of the intangible assets on September 30, 2008.

In December 2008, goodwill allocated to our ALIGN reporting unit following the ALIGN acquisition was fully written down in accordance with ASC 350, resulting in an impairment charge of approximately \$1.6 million being recognized on the consolidated statement of operations. A further decline in our stock price during the fourth quarter of 2008 caused us to perform an impairment analysis during December 2008. In determining the impairment charge, we considered the negative impact the current economic situation might have on sales growth expectations of the ALIGN products resulting in a downward revisions of projected net cash flows from product sales. These factors caused the discounted cash flows for the reporting unit to be less than its carrying value on December 31, 2008.

The future

Previously recognized goodwill and intangible assets acquired have been fully impaired as of December 31, 2008.

Restructuring charge

The following table summarizes the restructuring charges for years ended December 31, 2007, 2008 and 2009:

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Total restructuring charge	\$ 1,554	\$ 546	\$ 366	\$ (1,008)	\$ (180)	(65)%	(33)%

Fiscal 2009 as compared to fiscal 2008. The restructuring charge decreased by 33% or \$0.1 million from approximately \$0.5 million for the year ended December 31, 2008 to \$0.4 million for the year ended December 31, 2009.

In September 2008, we announced a revision of our operating plan that concentrates our resources on the advancement of our lead drug, sapacitabine, while maintaining a core competency in drug discovery and cell cycle biology. The plan initially reduced our workforce across all locations by 25 people. We recorded and paid approximately \$0.4 million of severance costs and \$0.1 million of accelerated depreciation for assets that will no longer be utilized. In addition we have accrued a charge of \$0.1 million in respect of costs of exiting the lease of our redundant Cambridge research facility. During the second and third quarters of 2009, we further reduced our workforce across all locations by an additional twenty six (26) people, making a total reduction of fifty one (51) people, or 63% of our workforce, since September 2008, totaling approximately \$0.4 million.

Fiscal 2008 as compared to fiscal 2007. The restructuring charge decreased by 65% or \$1.0 million from approximately \$1.5 million for the year ended December 31, 2007 to \$0.5 million for the year ended December 31, 2008.

In September 2008, we announced a revision of our operating plan that concentrates our resources on the advancement of our lead drug, sapacitabine, while maintaining a core competency in drug discovery and cell cycle biology. The plan initially reduced the workforce across all locations by 25 people. We recorded and paid approximately \$0.4 million of severance costs and \$0.1 million of accelerated depreciation for assets that will no longer be utilized. In addition we have accrued a charge of \$0.1 million in respect of costs of exiting the lease of our redundant Cambridge research facility.

During the year ended December 31, 2008, there were no changes to the assumption and estimates underlying the restructuring liability associated with exiting the Bothell facility. In 2007, we recognized a charge of \$1.7 million in respect of the lease. As of December 31, 2009, the fair value of the remaining lease payments, net of estimated sub-lease income was approximately \$1.1 million.

The future

As of December 31, 2009, the restructuring liability associated with exiting the Bothell facility was approximately \$1.1 million representing the present value of the remaining lease payments, net of estimated sub-lease income. The restructuring liability is subject to a variety of assumptions and estimates. We review these assumptions and estimates on a quarterly basis and adjust the accrual if necessary. These changes may be material.

As a result of the workforce reduction in September 2008, and during the second and third quarters of 2009, we vacated our laboratory facility in Cambridge, England. Further revisions to our operating plan, if any, will be assessed as circumstances dictate.

Other income / (expense)

The following table summarizes the other income for years ended December 31, 2007, 2008 and 2009:

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Payment under guarantee	\$	\$	\$ (1,652)	\$	\$ (1,652)		(100)%
Change in valuation of derivative	(93)			93		100%	0%
Change in valuation of warrants liability	3,205	3,502	(299)	\$ 297	(3,801)	9%	(109)%
Change in valuation of warrant			(44)		(44)		(100)%
Foreign Exchange gain/(loss)	490	(4,501)	(144)	(4,991)	4,357	(1019)%	97%
Interest income	3,554	1,380	102	(2,174)	(1,278)	(61)%	(93)%
Interest expense	(223)	(318)	(177)	(95)	141	(42)%	44%
Total other income (expense), net	\$ 6,933	\$ 63	\$ (2,214)	\$ (6,870)	\$ (2,277)	(99)%	3,614%

Fiscal 2009 as compared to fiscal 2008. Total other income (expense), net, reduced by approximately \$2.3 million from a gain \$0.1 million in 2008 to an expense of \$2.2 million in 2009 due to the reduction in interest income of \$1.3 million arising from lower yields available on lower average interest bearing cash and cash equivalents, an increase of \$3.8 million in the valuation of warrants liability and \$1.6 million in respect of a payment under guarantee related to our arrangement with Scottish Enterprise. This increase in expense was offset by a reduction in foreign exchange losses of \$4.4 million in 2009 compared to 2008. The differences related to these items are explained further below.

Change in valuation of derivative

On November 3, 2007, the embedded derivative associated with the dividend make-whole payment expired reducing the liability to \$0 and thus no further marked to market adjustments will be made with regard to this embedded derivative.

Change in value of warrants

The change in valuation of warrants relates to the issue of warrants to purchase shares of our common stock under the registered direct financing completed in February 2007. The warrants issued to the investors meet the requirements of and are being accounted for as a liability in accordance with ASC 840 *Accounting for Derivative Financial Instruments Indexed to, and Potentially Settled in, a Company's Own Stock*. (ASC 840). The value of the warrants is being marked to market each reporting period as a derivative gain or loss until exercised or expiration. For the year ended December 31, 2008, we recorded a gain of approximately \$3.5 million in the change in the value of warrants. For the year ended December 31, 2009, we recognized an expense of approximately \$0.3 million as the change in the value of warrants.

Foreign Exchange gain / (loss)

In conjunction with the operational review conducted by the Company in September 2008, the nature of intercompany funding was considered. It was concluded that as repayment of intercompany loans is not expected in the foreseeable future, the nature of the funding advanced was of a long-term investment nature and that the terms of the loans should be amended to reflect this. Effective October 1, 2008, intercompany loans ceased to be repayable on demand and have no fixed repayment date. As a result of the change in repayment terms, from October 1, 2008, all unrealized foreign exchange gains or losses arising on the intercompany loans will be recognized in other comprehensive income on the consolidated statement of stockholders' equity until repayment of the intercompany loan becomes foreseeable. For the year ended December 31, 2009 unfavorable unrealized foreign exchange movements recorded in other comprehensive income totaled \$5.7 million compared to \$12.3 million in 2008.

As a result of this change only foreign exchange gains/losses unrelated to the intercompany loans are recorded in income (expense) in the year ended December 31, 2009 which totaled \$0.1 million expense compared to a \$4.5 million of expense in 2008 of which \$4.8 million related to unrealized foreign exchange gains or losses arising on the intercompany loans charged to this category before the October 1, 2008 change offset by a realized gain of \$0.3 million on transactions in the year in respect of underlying operations.

Interest Income

Interest income decreased by approximately \$1.3 million from \$1.4 million for the year ended December 31, 2008 to \$0.1 million for the year ended December 31, 2009. During 2008, maturing short-term investments were reinvested in cash and cash equivalents, being a more secure form of investment and providing greater liquidity. As a result, these assets attracted a lower rate of interest. This was compounded by a reduction in the average balance of cash and cash equivalents and short-term investments during 2008 as compared to 2009.

Interest Expense

Interest expense decreased by \$0.1 million from \$0.3 million for year ended December 31, 2008 to \$0.2 million for the year ended December 31, 2009. For each of the years ended December 31, 2007 and 2008, we recorded accretion expense associated with the Bothell restructuring lease of \$0.2 million and \$0.1 million in 2009 on the consolidated statement of operations as interest expense. A further \$0.1 million of accretion expense will be recognized over the remaining life of the lease to December 2010.

The future

The valuation of the warrant liability will continue to be re-measured at the end of each reporting period. The valuation of the warrants is dependent upon many factors, including our stock price, interest rates and the remaining term of the instrument and may fluctuate significantly, which may have a significant impact on our statement of operations.

As the nature of funding advanced through inter-company loans is that of a long-term investment in nature, future unrealized foreign exchange gains and losses on such funding will be recognized in other comprehensive income until repayment of the intercompany loan becomes foreseeable. This will minimize the future impact of unrealized foreign exchange fluctuations on earnings.

A further accretion expense of approximately \$0.1 million associated with the Bothell lease restructuring charge will be recognized over the remaining life of the lease through December 2010.

Income tax benefit

Credit is taken for research and development tax credits, which are claimed from the United Kingdom's taxation and customs authority, in respect of qualifying research and development costs incurred.

The following table summarizes research and development tax credits for the years ended December 31, 2007, 2008 and 2009:

	Years ended			\$ Differences		% Differences	
	2007	2008	2009	2007 to 2008	2008 to 2009	2007 to 2008	2008 to 2009
	(in thousands)						
Total income tax benefit	\$ 2,041	\$ 1,749	\$ 948	\$ (292)	\$ (801)	(14)%	(46)%

Fiscal 2009 as compared to fiscal 2008. Research and development tax credits recoverable decreased by 46%, or approximately \$0.8 million, from approximately \$1.7 million for the year ended 2008 to approximately \$0.9 million for the year ended December 31, 2009. The level of tax credits recoverable is linked directly to qualifying research and development expenditure incurred in any one year but restricted to payroll taxes paid by us in the United Kingdom in that same year. The decrease was a reflection of decreased income taxes available for recovery as a consequence of the lower eligible research and development payroll expenses in the United Kingdom following the workforce reductions commenced in September 2008 and continued in the second and third quarters of 2009.

Fiscal 2008 as compared to fiscal 2007. Research and development tax credits recoverable decreased by 14%, or approximately \$0.3 million, from approximately \$2.0 million for the year ended 2007 to approximately \$1.7 million for the year ended December 31, 2008. The level of tax credits recoverable is linked directly to qualifying research and development expenditure incurred in any one year but restricted to payroll taxes paid by us in the United Kingdom in that same year. The decrease was a reflection of decreased income taxes available for recovery as a consequence of the lower eligible research and development payroll expenses in the United Kingdom in 2008 following the workforce reductions announced in September 2008.

The future

We expect to continue to be eligible to receive United Kingdom research and development tax credits for the foreseeable future and will elect to do so, however as a result of our revised operating plan announced in September 2008 and the subsequent reduction in workforce in the second and third quarters of 2009 the amount of payroll taxes payable in future periods will be lower than in previous periods, restricting available income tax credits to that lower amount.

Liquidity and Capital Resources

The following is a summary of our key liquidity measures as at December 31, 2008 and 2009:

	December 31, 2008	December 31, 2009	\$ Difference	% Difference
	(in thousands)			
Cash and cash equivalents	\$ 24,220	\$ 11,493	\$ (12,727)	(53)%
Short-term investments, available for sale	1,502		(1,502)	(100)%
Total cash and cash equivalents and short-term investments	\$ 25,722	\$ 11,493	\$ (14,229)	(55)%
Current assets	\$ 29,014	\$ 13,369	\$ (15,645)	(54)%

Edgar Filing: COCCIO CHRISTOPHER L - Form 4

Current liabilities	8,627	9,822	1,195	14%
Working capital	\$ 20,387	\$ 3,547	\$ (16,840)	(83)%

At December 31, 2009, we had cash and cash equivalents and short-term investments of \$11.5 million as compared with \$25.7 million at December 31, 2008. The lower balance at December 31, 2009 was primarily due to funding ongoing clinical trials, research and development, and to a lesser extent, sales and marketing activities.

Current liabilities increased by 14%, or \$1.2 million, to \$9.8 million at December 31, 2009 from \$8.6 million at December 31, 2008. Of the \$1.2 million increase, \$0.8 million relates to the amount payable under guarantee to Scottish Enterprise as part of the amendment in July 2009 to the March 2006 Agreement. In addition, the accounts payable balance increased by \$1.0 million primarily related to the manufacture of clinical trial supplies. This was offset by a \$0.6 million reduction in accrued compensation.

Since our inception, we have not generated any significant product revenues and have relied primarily on the proceeds from sales of equity and preferred securities to finance our operations and internal growth. Additional funding has come through interest on investments, licensing revenue, government grants and research and development tax credits. We have incurred significant losses since our inception. As of December 31, 2009, we had an accumulated deficit of \$222.3 million.

We believe that existing funds together with cash generated from operations and recent financing activities are sufficient to satisfy our planned working capital, capital expenditures, debt service and other financial commitments for at least the next twelve months. Current business and capital market risks could have a detrimental affect on the availability of sources of funding and our ability to access them in the future which may delay or impede our progress of advancing our drugs currently in the clinic to approval by the FDA for commercialization.

Cash provided by (used in) operating, investing and financing activities

Cash provided by (used in) operating, investing and financing activities for the years ended December 31, 2007, 2008 and 2009 is summarized as follows:

	Year ended December 31,		
	2007⁽²⁾	2008	2009⁽¹⁾
	(in thousands)		
Net cash used in operating activities	\$ (24,363)	\$ (29,905)	\$ (14,886)
Net cash provided by (used by) investing activities	\$ (22,693)	\$ 27,342	\$ 1,559
Net cash provided by (used by) financing activities	\$ 33,431	\$ (1,238)	\$ 3,545

(1) The effects of the correction of the error noted in the consolidated statements of cash flows is reflected in 2009.

(2) The effects of the correction of the error noted in the consolidated statements of cash flows is reflected in

2007.

Fiscal 2009 as compared to fiscal 2008.

Operating activities

Net cash used in operating activities decreased by \$15.0 million, from \$29.9 million in 2008 to \$14.9 million in 2009. Our net cash used in operating activities significantly decreased primarily as a result of our cost reduction plan first implemented in September 2008 and then again during June of 2009 and the focus to advancing sapacitabine into a pivotal Phase 3 trial. Net cash used in operating activities during the year ended December 31, 2009 of \$14.9 million resulted from our net operating loss of \$19.6 million, adjusted for material non-cash activities comprising amortization of investment premiums (discounts), change in valuation of liability-classified warrants, depreciation and amortization, unrealized foreign exchange losses and non-cash stock based compensation expense, amounting to \$2.1 million and a net reduction in working capital of \$2.5 million due to a decrease in prepaid expenses combined with a net increase in accounts payable and other current liabilities.

Net cash used in operating activities decreased by \$5.5 million, to \$29.9 million in 2008 from \$24.4 million in 2007. Net cash used in operating activities during the year ended December 31, 2008 of \$29.9 million resulted from our net operating loss of \$40.4 million, adjusted for material non-cash activities comprising amortization of investment premiums (discounts), change in valuation of liability-classified warrants, depreciation and amortization, goodwill and intangibles impairment, unrealized foreign exchange losses and non-cash stock based compensation expense, amounting to \$11.4 million and a net reduction in working capital of \$0.9 million due to a decrease in prepaid expenses combined with a net decrease in accounts payable and other current liabilities. The decrease of \$5.5 million in net cash used in operations was mainly due to downsizing of operations and the year on year change in working capital.

Investing activities

Net cash provided by investing activities in the year ended December 31, 2008 amounted to \$27.3 million. During the year ended December 31, 2009, cash provided by investing activities amounted to \$1.6 million. During the year ended December 31, 2007, we purchased short-term investments totaling \$153.6 million which was offset by maturities of \$136.4 million in short term investments and incurred cash expenditures of \$3.8 million for the acquisition of ALIGN on October 5, 2007. During 2008, the proceeds from maturing short-term investments were reinvested in cash and cash equivalents to reduce our risk profile. In addition, the net proceeds from \$27.7 million of maturing short-term investments were used to fund our operating activities.

Capital expenditure was reduced to \$15,000 for the year ended December 31, 2009 compared to expenditures of \$0.4 million for the year ended December 31, 2008.

Financing activities

Net cash provided by financing activities increased by \$4.8 million, from a use of \$1.2 million for the year ended December 31, 2008 to a source of \$3.6 million for the year ended December 31, 2009.

For year ended December 31, 2009, the net cash provided by financing activities related primarily to net proceeds received from the registered direct financing of \$2.9 million in July 2009. On December 10, 2007, we entered into a CEFF with Kingsbridge, which was subsequently amended on November 24, 2009, in which Kingsbridge committed to purchase the lesser of 4,084,590 shares of common stock or \$60 million of common stock from us over a three years-year period. Under the terms of the agreement, we will determine the exact timing and amount of any CEFF financings, subject to certain conditions. All amounts drawn down under the CEFF will be settled via the issuance of our common stock. We may access capital under the CEFF in tranches as described below, with each tranche being issued and priced over an eight-day pricing period. Kingsbridge will purchase shares of common stock pursuant to the CEFF at discounts ranging from 6% to 10% depending on the average market price of the common stock during the eight-day pricing period.

Pursuant to the amendment to the CEFF, we may, subject to certain conditions require Kingsbridge to purchase shares of common stock at a price that is between 80% and 94% of the volume weighted average price for each trading day during an eight-day pricing period. Additionally, we may access capital under the CEFF in maximum draw downs of (i) 4.0% of our market capitalization at the time of the draw down, with respect to the first draw down, (ii) 3.0% of our market capitalization at the time of the draw down with respect to one draw down per calendar quarter beginning on February 1, 2010, and (iii) 2.0% of our market capitalization at the time of the draw down with respect to all other draw downs. Finally, the interest rate applicable to any outstanding Make Whole Amount (as defined in the amendment) that may arise out of the our failure to deliver draw down shares on time was changed from five percent (5%) per annum to a rate equal to the greater of (i) the prime rate of interest then in effect as published by the Wall Street Journal plus three percent (3%) and (ii) ten percent (10%).

During December 2009 and subsequent to the year end, we sold an aggregate of 2,818,232 shares of our common stock to Kingsbridge under the terms of the CEFF in consideration of an aggregate of \$4.1 million, of which \$1.0 million was received in 2009 and \$3.1 million in 2010. Because we did not declare the payment of dividends on our preferred stock for several quarters during the fiscal year 2009, we will not be able to use our Registration Statement on Form S-3, which covers the shares subject to the CEFF and therefore, we may not be able to access the CEFF until such time as an effective registration statement covering such shares be in place.

In July 2009, we sold our securities to select institutional investors consisting of 4,000,000 units in a registered direct offering at a purchase price of \$0.85 per unit for approximately \$3.4 million in gross proceeds.

During 2007 the net cash provided by financing activities related primarily to gross proceeds received from the registered direct financing which raised \$36.0 million in gross proceeds, before deducting placement agent fees and offering expenses of \$2.6 million.

In February 2007, we sold approximately 4.2 million units, each unit consisting of one share of our common stock and a seven-year warrant to purchase 0.25 shares of our common stock, at a purchase price of \$8.47125 per unit in a registered direct offering. The purchase price for the shares and the exercise price for the warrants was \$8.44 per share, the closing bid price for our common stock on February 12, 2007. Investors paid \$0.125 per warrant. We issued 4,249,668 shares of common stock and warrants to purchase 1,062,412 shares of common stock.

For the years ended December 31, 2008 and 2009, the net cash outflow for financing activities primarily related to the payment of our preferred stock dividend of \$1.2 million and \$0.3 million, respectively.

Operating Capital and Capital Expenditure Requirements

We expect to continue to incur substantial operating losses in the future. While we have generated modest product revenues from ALIGN product sales for the years ended December 31, 2008 and 2009, we can not guarantee that we will generate any significant product revenues until a product candidate has been approved by the FDA or similar regulatory agencies in other countries and successfully commercialized.

We currently anticipate that our cash, cash equivalents and short-term investments, together with funds raised in January and February 2010, will be sufficient to fund our operations for at least the next 12 months. We can not be certain that any of our programs will be successful or that we will be able to raise sufficient funds to complete the development and commercialize any of our product candidates currently in development, should they succeed. Additionally, we plan to continue to evaluate in-licensing and acquisition opportunities to gain access to new drugs or drug targets that would fit with our strategy. Any such transaction would likely increase our funding needs in the future.

Our future funding requirements will depend on many factors, including but not limited to:

- the rate of progress and cost of our clinical trials, preclinical studies and other discovery and research and development activities;
- the costs associated with establishing manufacturing and commercialization capabilities;
- the costs of acquiring or investing in businesses, product candidates and technologies;
- the costs of filing, prosecuting, defending and enforcing any patent claims and other intellectual property rights;
- the costs and timing of seeking and obtaining FDA and other regulatory approvals;
- the effect of competing technological and market developments; and
- the economic and other terms and timing of any collaboration, licensing or other arrangements into which we may enter.

Until we can generate a sufficient amount of product revenue to finance our cash requirements, which we may never do, we expect to finance future cash needs primarily through public or private equity offerings, debt financings or strategic collaborations. Although we are not reliant on institutional credit finance and therefore not subject to debt covenant compliance requirements or potential withdrawal of credit by banks, the current economic climate has also impacted the availability of funds and activity in equity markets. We do not know whether additional funding will be available on acceptable terms, or at all. If we are not able to secure additional funding when needed, we may have to delay, reduce the scope of or eliminate one or more of our clinical trials or research and development programs or make changes to our operating plan similar to the revision made in September 2008. In addition, we may have to partner one or more of our product candidate programs at an earlier stage of development, which would lower the economic value of those programs to us.

Off-Balance Sheet Arrangements

As of December 31, 2009, we had no off-balance sheet arrangements.

Critical Accounting Policies

Our discussion and analysis of our financial condition and results of operations is based on our financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. Our significant accounting policies are described in Note 2 of the consolidated financial statements. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amounts of assets, liabilities and expenses and related disclosure of contingent assets and liabilities. We review our estimates on an ongoing basis. We base our estimates on historical experience and on various other assumptions that we believe to be reasonable under the circumstances. Actual results may differ from these estimates under different assumptions or conditions. We believe the judgments and estimates required by the following accounting policies to be critical in the preparation of our consolidated financial statements.

Revenue Recognition

Product sales

We have adopted the following revenue recognition policy related to the sales of Xclair[®] Cream, Numoisyn[®] Liquid and Numoisyn[®] Lozenges. We recognize revenue from these product sales when persuasive evidence of an arrangement exists; delivery has occurred or services have been rendered; the price is fixed and determinable; and collectability is reasonably assured.

As we offer a general right of return on these product sales, we must consider the guidance in ASC 605, and ASC 605 10. Under these pronouncements, we account for all product sales using the sell-through method. Under the sell-through method, revenue is not recognized upon shipment of product to distributors. Instead, we record deferred revenue at gross invoice sales price and deferred cost of sales at the cost at which those goods were held in inventory. We recognize revenue when such inventory is sold through to the end user. To estimate product sold through to end users, we rely on third-party information, including information obtained from significant distributors with respect to their inventory levels and sell-through to customers.

Stock-based Compensation

The Company grants stock options, restricted stock units and restricted stock to officers, employees, directors and consultants under the Company's 2006 Amended and Restated 2006 Equity Incentive Plan, which was amended and restated as of April 14, 2008. We also have outstanding options under various stock-based compensation plans for employees and directors.

ASC 718 requires measurement of compensation cost for all stock-based awards at fair value on date of grant and recognition of compensation over the requisite service period for awards expected to vest. The fair value of restricted stock and restricted stock units is determined based on the number of shares granted and the quoted price of our common stock on the date of grant. The determination of grant-date fair value for stock option awards is estimated using an option-pricing model, which includes variables such as the expected volatility of our share price, the anticipated exercise behavior of our employees, interest rates, and dividend yields. These variables are projected based on our historical data, experience, and other factors. Changes in any of these variables could result in material adjustments to the expense recognized for share-based payments.

Such value is recognized as an expense over the requisite service period, net of estimated forfeitures, using the straight-line attribution method. The estimation of stock awards that will ultimately vest requires judgment, and to the extent actual results or updated estimates differ from our current estimates, such amounts will be recorded as a cumulative adjustment in the period estimates are revised. We consider many factors when estimating expected forfeitures, including types of awards, employee class, and historical experience. During the quarter ended March 31, 2009, we revised the forfeiture rates because actual forfeiture rates were higher than that previously estimated primarily due to the lapsing of stock option grants on the termination of employees. The revision to past forfeiture estimates for the three months ended March 31, 2009 resulted in a reversal of stock-based compensation cost recognized in prior years with a consequent net gain of approximately \$0.2 million on the consolidated statement of operations. During the second and third quarters of 2009, we reduced the scale of our operations, including a workforce reduction across all locations. As a result, we recorded an expense of approximately \$0.4 million.

Warrants Liability

February 2007 Financing

ASC 815 requires freestanding contracts that are settled in our own stock, including common stock warrants to be designated as an equity instrument, asset or liability. Under the provisions of ASC 815, a contract designated as an asset or a liability must be carried at fair value until exercised or expired, with any changes in fair value recorded in the results of operations. A contract designated as an equity instrument must be included within equity, and no subsequent fair value adjustments are required. We review the classification of the contracts at each balance sheet date. Pursuant to ASC 815, since we are unable to control all the events or actions necessary to settle the warrants in registered shares the warrants have been recorded as a current liability at fair value. The fair value of the outstanding warrants is evaluated at each reporting period with any resulting change in the fair value being reflected in the consolidated statements of operations. For the year ended December 31, 2009, we recorded a charge of \$0.3 million. For the year ended December 31, 2008, we recorded a gain of \$3.5 million. Fair value is estimated using an option-pricing model, which includes variables such as the expected volatility of our share price, interest rates, and dividend yields. These variables are projected based on our historical data, experience, and other factors. Changes in any of these variables could result in material adjustments to the expense recognized for changes in the valuation of the warrants liability.

Goodwill and Intangible Assets

We recorded goodwill in March 2006 with respect to the merger with Xcyte and in October 2007 with respect to the acquisition of ALIGN. In accordance with ASC 350, we are required to test for impairment of goodwill, and intangible assets with indefinite lives which are not amortized, on an annual basis and at any other time if events occur or circumstances indicate that the carrying amount of goodwill and intangible assets may not be recoverable. Circumstances that could indicate impairment and require us to perform impairment tests more frequently than annually include significant adverse changes in market and economic conditions; adverse regulatory action; unanticipated competition or significant adverse change in perceived revenue potential.

We are organized as a single operating segment with two reporting units; ALIGN and Xcyte, to which goodwill was assigned along with relevant identifiable assets and liabilities. To test for impairment, we compared the fair value of each reporting unit to their respective carrying values, including assigned goodwill. To the extent the carrying amount of the reporting units exceeds its fair value; we compare the implied fair value of the reporting unit's goodwill with its carrying amount. The implied fair value of goodwill is determined by allocating the fair value of the reporting unit to all of the assets (recognized and unrecognized) and liabilities of the reporting unit in a manner similar to a purchase price allocation, in accordance with ASC 805, *Business Combinations* (ASC 805). The residual fair value after this allocation represents the implied fair value of the goodwill. To the extent the implied fair value of goodwill is less than its carrying amount we are required to recognize an impairment loss.

The fair value of our Xcyte reporting unit is determined by the market value of our outstanding common stock. However, the fair value of our ALIGN reporting unit is determined by using the income based valuation approach with respect to projected product sales. The income-based valuation measures the current value of the reporting unit by calculating the present value of its future cash flows using appropriate discount factors with regard to cost of capital experienced by entities of the same size and condition as us.

In September 2008, the goodwill acquired in the Xcyte transaction was written down in full and we recorded an impairment charge of approximately \$2.7 million in accordance with ASC 350. This impairment charge was identified through our annual impairment review process and was triggered primarily by a decline in our stock price that reduced our market capitalization below book value of the net assets of the Xcyte reporting unit. Our reduced market capitalization reflected the general decline in the economic environment.

In December 2008, goodwill allocated to our ALIGN reporting unit following the ALIGN acquisition was fully written down in accordance with ASC 350, resulting in an impairment charge of approximately \$1.6 million being recognized on the consolidated statement of operations. In determining the impairment charge, we considered the negative impact the current economic situation might have on sales growth expectations of the ALIGN products resulting in a downward revision of projected net cash flows from product sales. These factors caused the discounted cash flows for the reporting unit to be less than its carrying value on December 31, 2008.

Impairment of Long-Lived Assets

In accordance with ASC 360, when indicators of impairment exist, we assess the recoverability of the potentially affected long-lived assets by determining whether the carrying value of such assets can be recovered through undiscounted future operating cash flows. If impairment is indicated, we measure the amount of such impairment by comparing the carrying value of the asset to the estimated fair value of the related asset, which is generally determined based on the present value of the expected future cash flows.

Measurement of fair value is determined using the income-based valuation methodology. The income based valuation approach measures the current value of an asset (or asset group) by calculating the present value of the future expected cash flows to be derived from that asset, from the perspective of a market participant. Such cash flows are discounted using a rate of return that incorporates the risk-free rate for the use of funds, the expected rate of inflation and risks associated with using the asset. If the carrying amount of a long-lived asset exceeds its fair value, an impairment loss is recognized immediately and cannot be relieved at a later date.

Intangible assets acquired in the ALIGN transaction were also fully written down in September 2008, in accordance with ASC 360. An impairment charge of approximately \$3.6 million was identified through our annual impairment review process and was recognized in the consolidated statement of operations. This one-time, non-cash charge was triggered by a downwards revision of projected net cash flows from product sales, required due to budgetary constraints experienced by health care providers and restrictions of the cost reimbursement regime. As a result the sum of the expected undiscounted cash flows was less than the carrying amount of the intangible assets on September 30, 2008.

Recent Accounting Pronouncements

For information about recently issued accounting pronouncements please see Note 2 of our consolidated financial statements.

In May 2009, the FASB issued ASC 855, *Subsequent Events* (ASC 855), which provides guidance to establish general standards of accounting for and disclosures of events that occur after the balance sheet date but before financial statements are issued or are available to be issued. ASC 855 also requires entities to disclose the date through which subsequent events were evaluated as well as the rationale for why that date was selected. This disclosure should alert all users of financial statements that an entity has not evaluated subsequent events after that date in the set of financial statements being presented. ASC 855 is effective for interim and annual periods ending after June 15, 2009 and will be effective for the Company beginning with its interim period June 30, 2009. On February 24, 2010, The FASB issued Accounting Standards Update (ASU) 2010-09 to amend ASC 855. As a result of the ASU, SEC Registrants will not disclose the date through which management evaluated subsequent events in the financial statements. Since ASC 855 at most requires additional disclosures, the Company does not expect the adoption to have a material impact on its consolidated financial position, results of operations or cash flows.

In June 2009, the FASB issued FAS 168, *The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles*, which establishes the FASB Accounting Standards Codification (Codification) as the source of authoritative US GAAP recognized by the FASB to be applied to nongovernmental entities. Codification does not change current U.S. GAAP but is intended to simplify user access to all authoritative US GAAP by providing all the authoritative literature related to a particular topic in one place. All existing accounting standard documents will be superseded and all other accounting literature not included in the Codification will be considered non-authoritative. Rules and interpretive releases of the SEC under authority of federal securities laws are also included in the Codification as sources of authoritative US GAAP for SEC registrants. FAS 168 and the Codification are effective for financial statements issued for interim and annual periods ending after September 15, 2009. The Codification is effective for the Company during its interim period ending September 30, 2009 and did not have an impact on its financial condition or results of operations.

CYCLACEL PHARMACEUTICALS, INC.
(A Development Stage Company)

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Board of Directors and Shareholders
Cyclacel Pharmaceuticals, Inc.

We have audited the accompanying consolidated balance sheets of Cyclacel Pharmaceuticals, Inc. (a development stage company) as of December 31, 2009 and 2008, and the related consolidated statements of operations, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2009 and the period from August 13, 1996 (inception) to December 31, 2009. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Cyclacel Pharmaceuticals, Inc. (a development stage company) at December 31, 2009 and 2008, and the consolidated results of its operations and its cash flows for each of the three years in the period ended December 31, 2009 and for the period from August 13, 1996 (inception) to December 31, 2009, in conformity with U.S. generally accepted accounting principles.

As discussed in Note 20 to the consolidated financial statements, the net loss per share and the consolidated statements of cash flows have been restated to correct the Company's computation of its net loss per share and the presentation of preferred dividends in its consolidated statements of cash flows.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Cyclacel Pharmaceuticals Inc.'s internal control over financial reporting as of December 31, 2009, based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 29, 2010, except for the effects of the material weakness described in the sixth paragraph of that report, as to which the date is May 14, 2010, expressed an adverse opinion thereon.

/s/ Ernst & Young LLP

London, England
March 29 2010, except for Note 20,
as to which the date is May 14, 2010

CYCLACEL PHARMACEUTICALS, INC.
(A Development Stage Company)
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1 Organization of the Company

Cyclacel Pharmaceuticals, Inc. (Cyclacel or the Company) is a development-stage biopharmaceutical company dedicated to the development and commercialization of novel, mechanism-targeted drugs to treat human cancers and other serious disorders. Cyclacel's strategy is to build a diversified biopharmaceutical business focused in hematology and oncology based on a portfolio of commercial products and a development pipeline of novel drug candidates.

Our clinical development priorities are focused on sapacitabine in the following indications:

Acute myeloid leukemia, or AML in the elderly;

Myelodysplastic syndromes, or MDS; and

Non-small cell lung cancer or NSCLC.

The Company has additional clinical programs in development which are currently pending availability of clinical data. Once data become available and are reviewed, the Company will determine the feasibility of pursuing further development and/or partnering these assets, including sapacitabine in combination with seliciclib, seliciclib in NSCLC and nasopharyngeal cancer or NPC and CYC116. In addition, we market directly in the United States Xclair[®] Cream for radiation dermatitis and Numoisyn[®] Liquid and Numoisyn[®] Lozenges for xerostomia.

As a development stage enterprise, substantially all efforts of the Company to date have been devoted to performing research and development, conducting clinical trials, developing and acquiring intellectual properties, raising capital and recruiting and training personnel.

As disclosed in Note 19, subsequent to the year end the Company raised approximately \$18.5 million through the completion of two registered direct financings, drawdown of the Company's Committed Equity Financing Facility, or CEFF, and the exercise of warrants. Consequently the Company believes that it has sufficient resources to fund its operations for at least the next twelve months.

Basis of Presentation

The accompanying consolidated financial statements as of December 31, 2008 and 2009, and for each of the three years in the period ended December 31, 2009, have been prepared in accordance with accounting principles generally accepted in the United States. The consolidated financial statements include the financial statements of Cyclacel Pharmaceuticals, Inc. and all of the Company's wholly owned subsidiaries. All intercompany balances and transactions have been eliminated.

2 Summary of Significant Accounting Policies

Use of Estimates

The preparation of financial statements in accordance with accounting principles generally accepted in the United States requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities and related disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Cyclacel reviews its estimates on an ongoing basis. The estimates were based on historical experience and on various other assumptions that the Company believes to be reasonable under the circumstances. Actual results may differ from these estimates under different assumptions or conditions. Cyclacel believes the judgments and estimates required by the following accounting policies to be critical in the preparation of the Company's consolidated financial statements.

Concentration of Credit Risk and Other Risks and Uncertainties

Financial instruments which potentially subject the Company to concentrations of risk consist principally of cash and cash equivalents, short-term investments and accounts receivable. The Company invests its cash, cash equivalents and short-term investments in the United States and the United Kingdom in highly liquid money market accounts, federal agency obligations & municipal bonds and commercial paper & corporate bonds of financial institutions and corporations which are rated A or better by both Moody's and Standard and Poor's. Pursuant to the Company's investment guidelines, no one individual security shall have a maturity of greater than 18 months and investments in any one corporation is restricted to 5% of the total portfolio. At December 31, 2008 and 2009, the Company held no investments with a maturity in excess of one year. Due to the short-term nature of our investments, portfolio diversification, and the Company's investment policy we believe that concentration of credit risk is limited and liquidity is maintained.

The Company has significant customer concentration and the loss of any major customer could have a significant negative impact on the Company's revenue. During the years ended December 31, 2008 and 2009, approximately 85% and 86%, respectively, of our product sales in the United States were to three wholesalers: Cardinal Health, Inc., McKesson Corporation and AmerisourceBergen. As of December 31, 2008 and 2009, these three wholesalers accounted for 83% and 98%, respectively, of the Company's trade accounts receivable. The loss of any of these major wholesalers or reduced demand for products by a major wholesaler could have a significant negative impact on the Company's revenue. It is likely that we will continue to have significant customer concentration in the future. Drug candidates developed by the Company may require approvals or clearances from the U.S. Food and Drug Administration, or FDA, or other international regulatory agencies prior to commercialize sales. There can be no assurance that the Company's drug candidates will receive any of the required approvals or clearances. If the Company was denied approval or clearance or such approval was delayed, it may have a material adverse impact on the Company.

Foreign currency and currency translation

Average rates of exchange ruling during the year have been used to translate the statement of operations of the overseas subsidiary from its functional currency. Transactions which do not take place in an entity's functional currency are converted at the rate on the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are retranslated from their functional currency at balance sheet exchange rates. The balance sheet of the overseas subsidiary is translated at rates ruling at the balance sheet date from their functional currency. Translation adjustments arising on consolidation due to differences between average rates and balance sheet rates and unrealized foreign exchange gains or losses arising on translation of intercompany loans which are of a long-term-investment nature are shown as a movement in other comprehensive income. Other exchange rate differences are reported in the statements of operations for the year.

Segments

The Company has adopted Statement of ASC 280, *Segment Reporting* (ASC 280) and related disclosures about products, services, geographic areas and major customers. The Company has determined that it has one reportable segment.

Cash and Cash Equivalents

Cash equivalents are stated at cost, which equates to market value. The Company considers all highly liquid investments with an original maturity of three months or less at the time of initial deposit to be cash equivalents. The objectives of the Company's cash management policy are the safety and preservation of funds, liquidity sufficient to meet Cyclacel's cash flow requirements and attainment of a market rate of return.

Short-term Investments

The Company invests in certain marketable debt securities. Debt securities at December 31, 2008 and 2009 comprise investment-grade government and commercial securities purchased to generate a higher yield than cash equivalents. In accordance with ASC 320 Debt and Equity Securities (ASC 320) such investment securities are classified as available-for-sale and are carried at fair value. Under ASC 320, unrealized gains and losses, net of tax, are reported in a separate component of stockholders' equity until realized. Amortization, accretion, interest and dividends, realized gains and losses and declines in value judged to be other-than-temporary on available-for-sale securities are included in interest income. For the purpose of computing realized gains and losses, the cost of securities sold is based on the specific-identification method. Investments in securities with maturities of less than one year or which management intends to use to fund current operations are classified as short-term investments.

The Company evaluates whether an investment is other-than-temporarily impaired. This evaluation is dependent upon the specific facts and circumstances. Factors that are considered in determining whether an other-than-temporary decline in value has occurred include the market value of the security in relation to its cost basis and the financial condition of the issuer. The Company also invests its surplus cash in bank term deposits having a maturity period of between one day and one year. Accordingly, all cash resources with original maturity of three months or less have been classified as cash and cash equivalents and those with original maturity of more than three months as short-term investments.

Trade Accounts Receivable and Allowance for Doubtful Accounts

Receivables are reserved based on their respective aging categories and historical collection experience, taking into consideration the type of payer, historical and projected collection experience, and current economic and business conditions that could affect the collectability of our receivables. The allowance for doubtful accounts is reviewed for adequacy, at a minimum, on a quarterly basis. Changes in the allowance for doubtful accounts are recorded as an adjustment to bad debt expense within general and administrative expenses. Material revisions to reserve estimates may result from adverse changes in collection experience. The Company writes off accounts against the allowance for doubtful accounts when reasonable collection efforts have been unsuccessful and it is probable the receivable will not be recovered.

Inventory

Cyclacel values inventories at lower of cost or market value. The Company determines cost using the first-in, first-out method. As December 31, 2008 and 2009, all inventories were classified as finished goods. The Company analyzes its inventory levels quarterly and writes-down inventory that has become obsolete or that has a cost basis in excess of its expected net realizable value. Expired inventory is disposed of and the related costs are written off. If actual market conditions are less favorable than those projected by management, additional inventory write-downs may be required in future periods.

The Company analyzes its inventory levels to identify inventory that may expire prior to sale, inventory that has a cost basis in excess of its estimated realizable value, or inventory in excess of expected sales requirements. The determination of whether or not inventory costs will be realizable requires estimates by the Company's management. A critical input in this determination is future expected inventory requirements, based on internal sales forecasts. The Company then compares these requirements to the expiry dates of inventory on hand. To the extent that inventory is expected to expire prior to being sold, the Company will write down the value of inventory. If actual results differ from those estimates, additional inventory write-offs may be required. During 2009, the Company determined and recorded a reserve of approximately \$0.1 million, based upon current inventory levels, expiration dates, and future sales. This amount was recorded within cost of sales on the condensed consolidated statement of operations. In the future, reduced demand, quality issues or excess supply may result in write-downs, which would be recorded as adjustments to cost of sales.

Fair Value of Financial Instruments

For financial instruments consisting of cash and cash equivalents, short-term investments, accounts payable and accrued liabilities included in the Company's financial statements, the carrying amounts are reasonable estimates of fair value due to their short maturities.

Property, Plant and Equipment

Property, plant and equipment is stated at cost and depreciated on a straight-line basis over the estimated useful lives of the related assets, which are generally three to five years. Amortization of leasehold improvements is computed using the straight-line method over the shorter of the remaining lease term or the estimated useful life of the related assets, currently between five and fifteen years. Upon sale or retirement of assets, the costs and related accumulated depreciation and amortization are removed from the balance sheet and the resulting gain or loss is reflected as a component of operating income or loss. Expenditures for maintenance and repairs are charged to operating expenses as incurred. During 2009, the Company sold fixed assets totaling \$0.1 million, as part of its previously announced closing of the Cambridge facility and the reduction of workforce.

Goodwill and intangible assets

Goodwill represents the difference between the purchase price and the fair value of net tangible and identifiable intangible assets acquired in the business combination. Goodwill and intangible assets acquired in a purchase business combination and determined to have an indefinite useful life are not amortized, but instead are tested for impairment at least annually in accordance with the provisions of ASC 350, *Intangibles Goodwill and Other* (ASC 350). To test for impairment, the Company compares the fair value of its reporting units to their respective carrying values, including assigned goodwill. The Company is organized as a single operating segment with two reporting units; ALIGN and Xcyte. To the extent the carrying amount of the reporting units exceeds its fair value, the Company would be required to perform the second step of the impairment analysis, as this is an indication that goodwill may be impaired. In this second step, the Company compares the implied fair value of the reporting units goodwill with its carrying amount. The implied fair value of goodwill is determined by allocating the fair value of the reporting units to all of the assets (recognized and unrecognized) and liabilities of the reporting units in a manner similar to a purchase price allocation, in accordance with ASC 805, *Business Combinations* (ASC 805). The residual fair value after this allocation represents the implied fair value of the goodwill. To the extent the implied fair value of goodwill is less than its carrying amount, the Company would be required to recognize an impairment loss.

Impairment of Long-lived Assets

In accordance with the provisions of ASC 360, *Property, Plant, and Equipment* (ASC 360), the Company reviews long-lived assets, including property, plant and equipment and intangible assets which are subject to amortization, for impairment whenever events or changes in business circumstances indicate that the carrying amount of the assets may not be fully recoverable. We assess the recoverability of the potentially affected long-lived assets under ASC 360 by determining whether the carrying value of such assets can be recovered through undiscounted future operating cash flows.

Impairment, if any, is measured as the amount by which the carrying amount of a long-lived asset exceeds its fair value. If impairment is indicated, the Company measures the amount of such impairment by comparing the carrying value of the asset to the estimated fair value of the related asset, which is generally determined based on the present value of the expected future cash flows.

Measurement of fair value is determined using the income-based valuation methodology. The income-based valuation approach measures the current value of an asset (or asset group) by calculating the present value of the future expected cash flows to be derived from that asset, from the perspective of a market participant. Such cash flows are discounted using a rate of return that incorporates the risk-free rate for the use of funds, the expected rate of inflation and risks associated with using the asset. If the carrying amount of a long-lived asset exceeds its fair value, an impairment loss is recognized.

Revenue Recognition

Product sales

The Company recognizes revenue from product sales when persuasive evidence of an arrangement exists; delivery has occurred or services have been rendered; the selling price is fixed and determinable; and collectability is reasonably assured.

The Company offers a general right of return on these product sales, and has considered the guidance in ASC 605-15,

Revenue Recognition -Products (ASC 605-15) and ASC 605 10 *Revenue Recognition Overall* (ASC 605-10). Under these pronouncements, the Company accounts for all product sales using the sell-through method. Under the sell-through method, revenue is not recognized upon shipment of product to distributors. Instead, the Company records deferred revenue at gross invoice sales price and deferred cost of sales at the cost at which those goods were held in inventory. The Company recognizes revenue when such inventory is sold through to the end user based upon prescriptions filled. To estimate product sold through to end users, the Company relies on third-party information, including information obtained from significant distributors with respect to their inventory levels and sell-through to customers.

Collaboration, research and development, and grant revenue

Certain of the Company's revenues are earned from collaborative agreements. The Company recognizes revenue when persuasive evidence of an arrangement exists; delivery has occurred or services have been rendered; the fee is fixed and determinable; and collectability is reasonably assured. Determination of whether these criteria have been met is based on management's judgments regarding the nature of the research performed, the substance of the milestones met relative to those the Company must still perform, and the collectability of any related fees. Should changes in conditions cause management to determine these criteria are not met for certain future transactions, revenue recognized for any reporting period could be adversely affected.

Research and development revenues, which are earned under agreements with third parties for contract research and development activities, are recorded as the related services are performed. Milestone payments are non-refundable and recognized as revenue when earned, as evidenced by achievement of the specified milestones and the absence of ongoing performance obligations. Any amounts received in advance of performance are recorded as deferred revenue. None of the revenues recognized to date are refundable if the relevant research effort is not successful.

Grant revenues from government agencies and private research foundations are recognized as the related qualified research and development costs are incurred, up to the limit of the prior approval funding amounts. Grant revenues are not refundable.

Clinical Trial Accounting

Data management and monitoring of all of the Company's clinical trials are performed by contract research organizations (CROs) or clinical research associates (CRAs) in accordance with the Company's standard operating procedures. Typically, CROs and some CRAs bill monthly for services performed, and others bill based upon milestones achieved. For outstanding amounts, the Company accrues unbilled clinical trial expenses based on estimates of the level of services performed each period. Costs of setting up clinical trial sites for participation in the trials are expensed immediately as research and development expenses. Clinical trial site costs related to patient enrollment are accrued as patients are entered into the trial and any initial payment made to the clinical trial site is recognized upon execution of the clinical trial agreements and expensed as research and development expenses.

Research and Development Expenditures

Research and development expenses consist primarily of costs associated with the Company's product candidates, upfront fees, milestones, compensation and other expenses for research and development personnel, supplies and development materials, costs for consultants and related contract research, facility costs, amortization of purchased technology and depreciation. Expenditures relating to research and development are expensed as incurred.

Patent Costs

Costs relating to prosecution are charged to operations as incurred as recoverability of such expenditure is uncertain.

Leased Assets

The costs of operating leases are charged to operations on a straight-line basis over the lease term.

Where the Company enters into a lease which entails taking substantially all the risks and rewards of ownership of an asset, the lease is treated as a capital lease. The asset is recorded in the balance sheet as an asset and is depreciated in accordance with the aforementioned depreciation policies. The capital elements of future lease payments are recorded as liabilities and the interest is charged to operations over the period of the lease.

Income Taxes

The Company accounts for income taxes under the liability method. Under this method, deferred tax assets and liabilities are determined based on the difference between the financial statement and tax bases of assets and liabilities using enacted tax rates in effect for the year in which the differences are expected to affect taxable income. Valuation allowances are established when necessary to reduce deferred tax assets to the amounts expected to be realized.

The Company adopted the guidance related to accounting for uncertainty in income taxes, primarily codified in ASC 740 *Income taxes* (ASC 740). ASC 740 clarifies the accounting for uncertainty in income taxes recognized in a company's financial statements by prescribing a minimum probability threshold a tax position is required to meet before being recognized in the financial statements. It also provides guidance on derecognition, measurement, classification, interest and penalties, accounting in interim periods as well as disclosure and transition.

Credit is taken in the accounting period for research and development tax credits, which will be claimed from H. M. Revenue & Customs, the United Kingdom's taxation and customs authority, in respect of qualifying research and development costs incurred in the same accounting period.

Net Loss Per Common Share

The Company calculates net loss per common share in accordance with ASC 260 *Earnings Per Share* (ASC 260). Basic and diluted net loss per common share was determined by dividing net loss applicable to common stockholders by the weighted average number of common shares outstanding during the period. The Company's potentially dilutive shares, which include outstanding common stock options, restricted stock, restricted stock units, convertible preferred stock, make-whole dividend payments of common stock on convertible preferred stock and common stock warrants, have not been included in the computation of diluted net loss per share for all periods as the result would be anti-dilutive.

	Years ended December 31,		
	2007	2008	2009
Stock options	2,592,246	3,674,899	3,349,876
Restricted Stock and Restricted Stock Units		141,700	91,145
Convertible preferred stock	870,980	870,980	870,980
Cyclacel stock to be issued on October 5, 2008	46,044		
Common stock issuable to Kingsbridge			328,602
Common stock warrants	3,809,703	3,809,272	7,044,363
Total shares excluded from calculation	7,318,973	8,496,851	11,684,966

The net loss reconciliation between net loss reported and the net loss applicable to common shareholders is set forth below. This information includes the effects of the correction of errors described in Note 20.

	Years ended December 31		
	2007	2008	2009
	(\$000s except for per share amounts)		
Net loss reported	(24,053)	(40,386)	(19,570)
Less: dividends on convertible exchangeable preferred shares	(307)	(1,227)	(1,228)

Net loss applicable to common shareholders	(24,360)	(41,613)	(20,798)
Weighted average common shares outstanding	19,873,911	20,433,129	22,196,840
Loss per share basic and diluted	(\$1.23)	(\$2.04)	(\$0.94)

Derivative Instruments

The Company issued warrants to purchase shares of common stock under the registered direct financing completed in February 2007. These warrants are being accounted for as a liability in accordance with ASC 815 *Derivatives and Hedging* (ASC 815). At the date of the transaction, the fair value of the warrants of \$6.8 million was determined utilizing the Black-Scholes option pricing model utilizing the following assumptions: risk free interest rate 4.68%, expected volatility 85%, expected dividend yield 0%, and a remaining contractual life of 7 years. The value of the warrant shares is being marked to market each reporting period as a derivative gain or loss on the consolidated statement of operations until exercised or expiration. At December 31, 2008, the fair value of the warrants was approximately \$43,000 (utilizing the following assumptions: risk free interest rate 1.47%, expected volatility 75%, expected dividend yield 0%, and a remaining contractual life of 5.13 years). At December 31, 2009, the fair value of the warrants was \$0.3 million (utilizing the following assumptions: risk free interest rate 2.13%, expected volatility 96%, expected dividend yield 0%, and a remaining contractual life of 4.13 years). During 2009, the Company recognized the change in the value of warrants of approximately \$0.3 million as a loss on the consolidated statement of operations. During 2008, the Company recognized the change in the value of warrants of approximately \$3.5 million as a gain on the consolidated statement of operations.

The terms of the Company's November 2004 convertible preferred stock offering included a make-whole dividend payment feature. If the Company elected to automatically convert, or the holder elected to voluntarily converted, some or all of the convertible preferred stock into shares of its common stock prior to November 3, 2007, the Company was required to make an additional payment on the convertible preferred stock equal to the aggregate amount of dividends that would have been payable on the convertible preferred stock through and including November 3, 2007, less any dividends already paid on the convertible preferred stock. This additional payment was payable in cash or, at the Company's option, in shares of its common stock, or a combination of cash and shares of common stock. This make-whole dividend payment feature was considered to be an embedded derivative and was recorded on the balance sheet at fair value as a current liability. During the year ended December 31, 2007 the Company recognized other income (expense) in the consolidated statement of operations as the fair value of this derivative fluctuated from period to period. The conversion feature expired on November 3, 2007.

The accounting for derivatives requires significant judgments and estimates in determining the fair value in the absence of quoted market values. These estimates are based on valuation methodologies and assumptions deemed appropriate in the circumstances. The fair value of the dividend make-whole payment feature is based on various assumptions, including the estimated market volatility and discount rates used in determination of fair value. The use of different assumptions may have a material effect on the estimated fair value amount and the Company's results of operations.

Stock-based Compensation

The Company grants stock options, restricted stock units and restricted stock to officers, employees and directors under the 2006 Plans, which were approved on March 16, 2006. The Company has outstanding options under various stock-based compensation plans for employees and directors. These plans are described more fully in Note 14 *Stock-Based Compensation Arrangements*. The Company accounts for these plans under ASC 718 *Compensation Stock Compensation* (ASC 718) which was adopted effective January 1, 2006 under the modified prospective transition method.

ASC 718 requires measurement of compensation cost for all stock-based awards at fair value on date of grant and recognition of compensation over the requisite service period for awards expected to vest. The fair value of restricted stock and restricted stock units is determined based on the number of shares granted and the quoted price of our common stock on the date of grant. Such value is recognized as expense over the service period, net of estimated forfeitures, using the straight-line attribution method. The estimation of stock awards that will ultimately vest requires judgment, and to the extent actual results or updated estimates differ from our current estimates, such amounts will be recorded as a cumulative adjustment in the period estimates are revised. We consider many factors when estimating expected forfeitures, including types of awards, employee class, and historical experience. Actual results and future estimates may differ substantially from our current estimates.

Comprehensive Income (Loss)

In accordance with ASC 220, *Comprehensive Income* (ASC 220) all components of comprehensive income (loss), including net income (loss), are reported in the financial statements in the period in which they are recognized.

Comprehensive income (loss) is defined as the change in equity during a period from transactions and other events and circumstances from non owner sources. Net income (loss) and other comprehensive income (loss), including foreign currency translation adjustments, are reported, net of any related tax effect, to arrive at comprehensive income (loss). No taxes were recorded on these items.

Restructuring Expense

The Company records costs and liabilities associated with exit and disposal activities, when certain criteria have been met in accordance with ASC 420 *Exit or Disposal Cost Obligation* (ASC 420), at fair value in the period the liability is incurred. The Company's restructuring and integration plan is subject to continued future refinement as additional information becomes available.

On September 16, 2008, the Company announced a revision of its operating plan that concentrates its resources on the advancement of our lead drug, sapacitabine, while maintaining its core competency in drug discovery and cell cycle biology. The plan reduced its workforce across all locations by 25 people. During the year ended December 31, 2008, the Company recorded approximately \$0.4 million for severance payments and \$0.1 million of accelerated depreciation for assets that will no longer be utilized. All severance payments were paid as of December 31, 2008. The Company assigned the lease of its redundant Cambridge research facility back to the landlord and, in accordance with the terms of the lease, incurred a net charge, incorporating a surrender fee, of \$0.1 million. In June 2009, the Company further reduced its workforce across all locations by 26 people making a total reduction of 51 people (or 63% of the workforce) since September 2008. The Company recorded approximately \$0.4 million for severance payments all of which were paid as of December 31, 2009. An asset impairment amounting to \$0.2 million was also charged to the consolidated statement of operations as a result of assets being identified that were no longer being utilized.

Recent Accounting Pronouncements

In May 2009, the FASB issued ASC 855, *Subsequent Events* (ASC 855), which provides guidance to establish general standards of accounting for and disclosures of events that occur after the balance sheet date but before financial statements are issued or are available to be issued. ASC 855 also requires entities to disclose the date through which subsequent events were evaluated as well as the rationale for why that date was selected. This disclosure should alert all users of financial statements that an entity has not evaluated subsequent events after that date in the set of financial statements being presented. ASC 855 is effective for interim and annual periods ending after June 15, 2009 and was effective for the Company beginning with its interim period June 30, 2009. On February 24, 2010, The FASB issued Accounting Standards Update (ASU) 2010-09 to amend ASC 855. As a result of the ASU, SEC Registrants will not disclose the date through which management evaluated events in the financial statements. The adoption of ASC 855 did not to have a material impact on the Company s consolidated financial position, results of operations or cash flows as it mostly requires only additional disclosures.

In June 2009, the FASB issued FAS 168, *The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles*, primarily codified in ASC 105, which establishes the FASB Accounting Standards Codification (Codification) as the source of authoritative US GAAP recognized by the FASB to be applied to nongovernmental entities. Codification does not change current U.S. GAAP but is intended to simplify user access to all authoritative US GAAP by providing all the authoritative literature related to a particular topic in one place. All existing accounting standard documents will be superseded and all other accounting literature not included in the Codification will be considered non-authoritative. Rules and interpretive releases of the SEC under authority of federal securities laws are also included in the Codification as sources of authoritative US GAAP for SEC registrants. FAS 168 and the Codification are effective for financial statements issued for interim and annual periods ending after September 15, 2009. The Codification was adopted on September 30, 2009 and it did not have a material impact on the Company's financial condition or results of operations.

3 Significant Contracts

Distribution, Licensing and Research Agreements

The Company has entered into licensing agreements with academic and research organizations. Under the terms of these agreements, the Company has received licenses to technology and patent applications. The Company is required to pay royalties on future sales of product employing the technology or falling under claims of patent applications. Additional payments are due if the Company sublicenses the technology or patent applications or if the Company achieves predefined milestones.

In respect of Licensing Agreements, additional payments of \$23.4 million would be payable if the Company achieves predefined milestones subject to achievement of all the specific contractual milestones and the Company's decision to continue with these projects. Under these agreements the Company makes annual payments that do not presently exceed \$0.1 million. Moreover, these payments will not exceed \$0.1 million per annum while the defined milestones set out in the related agreements have not been achieved.

In connection with the asset acquisition with ALIGN on October 5, 2007, the Company acquired license agreements for the exclusive rights to sell and distribute three products in the United States. The Company, as part of securing long term supply arrangements had commitments to make future payments totaling approximately \$1.3 million of which \$0.6 million was paid in 2009 and the remainder of \$0.7 million is due in 2010. Also, the Company has a minimum purchase obligation equivalent to the value of product purchased in the previous year. For the year ended December 31, 2010 this equates to \$0.1 million.

4 Acquisition

On October 5, 2007, Achilles Acquisition, LLC renamed immediately following the acquisition to ALIGN Pharmaceuticals, LLC, or ALIGN, a wholly-owned subsidiary of Cyclacel, entered into a definitive asset purchase agreement with ALIGN Pharmaceuticals, LLC and ALIGN Holdings, LLC or Sellers, to acquire substantially all of the Sellers' assets for a purchase price of approximately \$3.8 million. The Company also committed, as part of securing long term supply arrangements, to make future payments totaling approximately \$1.3 million of which \$0.6 million was paid in 2009 and the remainder of \$0.7 million will be paid in 2010. The present value of these commitments has been reported as other short term payables and other long term payables on the consolidated balance sheet as at December 31, 2008 and as short term payables as of December 31, 2009.

5 Cash and Cash Equivalents

The following is a summary of cash and cash equivalents at December 31, 2008 and 2009:

	December 31,	
	2008 \$000	2009 \$000
Cash	4,580	2,996
Deposits with original maturity of less than three months	19,640	8,497
	24,220	11,493

6 Short-term Investments

The following is a summary of short-term investments at December 31, 2008:

	December 31, 2008			Fair value \$000
	Amortized cost \$000	Gross unrealized gains \$000	Gross unrealized losses \$000	
Corporate bonds & commercial paper	1,501	1		1,502

At December 31, 2009, the Company did not own any short-term investments. In 2008, the Company disposed of short-term securities prior to maturity, realizing a gain of approximately \$9,000.

For investments that are in an unrealized loss position, the Company has evaluated the nature of the investments, the duration of the impairments and concluded that the impairments are not other-than-temporary.

At December 31, 2008, the Company had marketable securities at fair value with contractual maturities of greater than one year but less than 5 years of \$1.5 million. At December 31, 2009, the Company did not own any marketable securities.

Fair value measurements

The Company adopted ASC 820 *Fair Value Measurements and Disclosures* (ASC 820) for its financial assets and liabilities on January 1, 2008, and for non-financial assets and non-financial liabilities that are not recognized or disclosed at fair value in the financial statements on a recurring basis on January 1, 2009. The Company's adoption of ASC 820 did not materially affect the Company's financial position, results of operations or liquidity. As defined in ASC 820, fair value is based on the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. In order to increase consistency and comparability in fair value measurements, ASC 820 establishes a fair value hierarchy that prioritizes observable and unobservable inputs used to measure fair value into three broad levels, which are described below:

Level 1: Quoted prices (unadjusted) in active markets that are accessible at the measurement date for assets or liabilities. The fair value hierarchy gives the highest priority to Level 1 inputs.

Level 2: Inputs other than quoted prices within Level 1 that are observable for the asset or liability, either directly or indirectly.

Level 3: Unobservable inputs that are used when little or no market data is available. The fair value hierarchy gives the lowest priority to Level 3 inputs.

In determining fair value, the Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs to the extent possible as well as considers counterparty credit risk in its assessment of fair value.

Financial assets and liabilities carried at fair value on a recurring basis as of December 31, 2009 are classified in the table below in one of the three categories described above:

	Level 1 \$000	Level 2 \$000	Level 3 \$000	Total \$000
Warrants		342		342

7 Prepaid Expenses and Other Current Assets

The following is a summary of prepaid expenses and other current assets at December 31, 2008 and 2009:

	December 31,	
	2008	2009
	\$000	\$000
Research and development tax credit receivable	1,530	1,096
Prepayments	1,017	456
Other current assets	237	179
	2,784	1,731

8 Property, Plant and Equipment

Property, plant and equipment consisted of the following:

	Useful lives in years from date of acquisition	December 31,	
		2008	2009
		\$000	\$000
Leasehold improvements	Life of lease (15 yrs)	811	860
Research and laboratory equipment	3 to 5 yrs	7,170	7,894
Office equipment and furniture	3 to 5 yrs	1,859	1,280
		9,840	10,034
Less: accumulated depreciation and amortization		(8,003)	(8,912)
Impairment		(89)	(221)
		1,748	901

The depreciation and amortization of property, plant and equipment amounted to \$1.0 million, \$1.1 million and \$0.7 million for each of the years ended December 31, 2007, 2008 and 2009, respectively. These charges include depreciation of assets held under capital leases.

Depreciation and amortization expense for the period from inception or August 13, 1996 through to December 31, 2009 was \$11.9 million. At December 31, 2008 and 2009 there were no assets held under capital lease.

As a result of the Company revising its operating plan in September 2008, the Company identified that certain research and development assets at its Cambridge, UK facility would no longer be utilized (see note 14 Restructuring). For the years ended December 31, 2008 and 2009, the Company recorded an asset impairment of \$0.1 million and \$0.2 million, respectively, in respect of these assets as accelerated depreciation in accordance with ASC 420 which are

shown within research and development expense on the consolidated income statement. There were no impairments of property, plant and equipment during the year ended December 31, 2007.

9 Intangible Assets and Goodwill

Intangible assets consisted of the following:

	ALIGN					Beneficial contract	
	License agreements	Customer relationships	trade name	Non-compete agreements	pricing arrangement		Total
Intangible Assets							
Useful lives in years from date of acquisition	7 yrs	7 yrs	2 yrs	2 yrs	2 yrs		
	\$000	\$000	\$000	\$000	\$000		\$000
Balance as of December 31, 2007	2,945	516	88	343	413		4,305
Less: amortization	(295)	(51)	(38)	(147)	(177)		(708)
Less: impairment charge	(2,650)	(465)	(50)	(196)	(236)		(3,597)

Balance as of December 31, 2008

Intangibles

As part of the acquisition of ALIGN, the Company acquired rights to a license agreement with Sinclair as well as to various customer relationships. The license agreement allows Cyclacel to exclusively sell and distribute Xclair[®] Cream, Numoisyn[®] Liquid and Numoisyn[®] Lozenges in the United States. The Company has amortized the license agreement and customer relationship intangible assets over the remaining life of the contract of approximately seven years. The Company also assumed all rights to the ALIGN trade name, as well as non-compete agreements signed between ALIGN and its senior managers and a beneficial contract pricing arrangement. The Company has amortized the fair values of these assets over 2 years, which represents the approximate time period that the non-compete agreements will remain in effect based on the employment contracts of the existing ALIGN management team. The Company performed its annual impairment review of these assets as of September 2008. The fair values of these assets, when treated as an asset group in accordance with ASC 360, was established by using the income based valuation methodology, and an impairment charge of approximately \$3.6 million was recognized in the consolidated statement of operations. This one-time, non-cash charge was triggered by a downwards revision of projected net cash flows from product sales, required due to budgetary constraints experienced by health care providers and restrictions of the cost reimbursement regime. As a result the sum of the expected undiscounted cash flows was less than the carrying amount of the intangible assets on September 30, 2008.

Goodwill

The Company recognized goodwill arising on the Xcyte and ALIGN purchase transactions in 2006 and 2007 respectively in accordance with ASC 805, *Business Combinations* (ASC 805), The Company is organized as a single operating segment with two reporting units; ALIGN and Xcyte. The Company performed impairment analyses of goodwill for both Xcyte and ALIGN as at September 30, 2008 and of ALIGN as at December 31, 2008. The fair value of the Company's Xcyte reporting unit was determined by the fair market value of the Company's outstanding common stock and in the case of the ALIGN reporting unit by using the income based valuation approach with respect to projected product sales. The income-based valuation measures the current value of the reporting unit by calculating the present value of its future cash flows using appropriate discount factors with regard to cost of capital experienced by entities of the same size and condition as the Company.

To test for impairment, the Company compares the fair value of its reporting units to their respective carrying values, including assigned goodwill. To the extent the carrying amount of the reporting units exceeds its fair value; the Company is required to perform the second step of the impairment analysis, as this is an indication that goodwill may be impaired. In this second step, the Company compares the implied fair value of the reporting units goodwill with its carrying amount. The implied fair value of goodwill is determined by allocating the fair value of the reporting units to all of the assets (recognized and unrecognized) and liabilities of the reporting units in a manner similar to a purchase

price allocation, in accordance with ASC 805. The residual fair value after this allocation represents the implied fair value of the goodwill. To the extent the implied fair value of goodwill is less than its carrying amount the Company is required to recognize an impairment loss.

In September 2008, the goodwill acquired in the Xcyte transaction was written down in full and we recorded an impairment charge of approximately \$2.7 million in accordance with ASC 350. This impairment charge was identified through our annual impairment review process and was triggered primarily by a decline in our stock price that reduced our market capitalization below book value of the net assets of the Xcyte reporting unit. Our reduced market capitalization reflected the general decline in the economic environment.

In December 2008, goodwill allocated to our ALIGN reporting unit following the ALIGN acquisition was fully written down in accordance with ASC 350, resulting in an impairment charge of approximately \$1.6 million being recognized on the consolidated statement of operations. In determining the impairment charge, we considered the negative impact the current economic situation might have on sales growth expectations of the ALIGN products resulting in a downward revisions of projected net cash flows from product sales. These factors caused the discounted cash flows for the reporting unit to be less than its carrying value on December 31, 2008.

10 Accrued and Other Current Liabilities

Accrued and other current liabilities consisted of the following:

	December 31,	
	2008	2009
	\$000	\$000
Accrued research and development	3,653	2,654
Accrued IP / Patent costs	264	283
Accrued compensation	707	136
Amount payable under license agreement	594	651
Amount payable under guarantee		796
Preference dividend	307	1,228
Other current liabilities	1,276	961
	6,801	6,709

11 Commitments and contingencies

General

Please refer to Notes 3 and 4 for a further discussion of certain of the Company's commitments and contingencies.

Leases

The following is a summary of the Company's contractual obligations and commitments relating to its facilities and equipment leases as at December 31, 2009:

	Operating lease obligations \$ 000
2010	1,606
2011	671
2012	415
2013	407
2014	407
Thereafter	4,396

Rent expense, which includes lease payments related to the Company's research and development facilities and corporate headquarters and other rent related expenses, was, \$1.1 million, \$0.9 million and \$0.9 million for the years ended December 31, 2007, 2008 and 2009, respectively.

In October 2000, the Company entered into a 25-year lease for its research and development facility in Dundee, Scotland. In October 2006, the Company entered into a five-year lease for office space in Berkeley Heights, New Jersey which is the location of the Company's corporate headquarters.

The Company continues to lease approximately 40,500 square feet of space in Bothell, Washington, with monthly payments of approximately \$0.1 million. The lease term on this space expires December 2010. However, activities were discontinued at the Bothell facility during the third quarter of 2005 and the Company continued to explore options for the future of this facility. Market conditions for subleasing space in Bothell are currently considered poor primarily due to an overabundance of available space. Accordingly, as part of the Stock Purchase on March 27, 2006, the Company recorded an accrued restructuring liability which was computed as the present value of the difference between the remaining lease payments due less the estimate of net sublease income and expenses.

As of December 31, 2009 the accrued restructuring liability was \$1.1 million. This represents the Company's best estimate of the fair value of the liability as determined under ASC 420. Subsequent changes in the liability due to accretion, or changes in estimates of sublease assumptions, etc. will be recognized as adjustments to restructuring charges in future periods. (See Restructuring under Footnote 14).

The Company also leased a second research facility at the Babraham Research Campus, Cambridge, England with a lease expiration date of August 2010. Under the revised plan announced in September 2008, the Cambridge laboratory facility will no longer be used by the Company. In 2009, the Company assigned the lease of its redundant Cambridge research facility back to the landlord and, in accordance with the terms of the lease, incurred a net charge, incorporating a surrender fee, of \$0.1 million.

Guarantee

On July 28, 2005 and amended on March 27, 2006, Cyclacel Group plc (Group) signed a convertible Loan Note Instrument constituting convertible unsecured loan notes (the Loan) and entered into a Facility Agreement (Agreement) with Scottish Enterprise (SE), as lender, whereby SE subscribed for £5 million, or approximately \$9 million at the time, of the convertible loan notes. The loan was subsequently converted into 1,231,527 preferred D shares of the Group in satisfaction of all amounts owed by Group under the convertible loan notes. The number of preferred D shares that SE received was calculated by dividing the principal amount outstanding under the loan note by £4.06. The preferred D shares were exchanged for shares in Xcyte Therapies, Inc. on March 27, 2006 as part of the transaction between Xcyte and Cyclacel Limited. However, Scottish Enterprise retained the ability it had under the Agreement to receive a cash payment should the research operations in Scotland be significantly reduced. Cyclacel Limited guaranteed approximately £5 million, the amount potentially due to SE, which will be calculated as a maximum of £5 million less the market value of the shares held (or would have held in the event they dispose of any shares) by SE at the time of any significant reduction in research facilities.

On June 22, 2009, the Company amended the March 2006 Agreement with SE, in order to allow the Company to implement a reduction of the Company's research operations located in Scotland in exchange for the parties' agreement to modify the payment terms of the Agreement in the principal amount of £5 million (approximately \$8.0 million at December 31, 2009), which SE had previously entered into with the Company. The original agreement dated March 27, 2006, provided for repayment of £5 million in the event the Company significantly reduced its Scottish research operations. Pursuant to the terms of the Amendment, in association with Cyclacel's material reduction in staff at its Scottish research facility, the parties agreed to a modified payment of £1 million (approximately \$1.7 million at June 22, 2009) payable in two equal tranches. On July 1, 2009 the first installment of £0.5 (approximately \$0.8 million) million was paid and the remaining amount of \$0.8 million was paid on January 6, 2010. In addition, should a further reduction below current minimum staff levels be effectuated before July 2014 without SE's prior consent, the Company will guarantee approximately £4 million, the amount potentially due to SE, which will be calculated as a maximum of £4 million less the market value of the shares held (or would have held in the event they dispose of any shares) by SE at the time of any further reduction in research facilities. This resulted in a charge to the income statement in the second quarter of 2009 of £1 million (\$1.7 million), with the outstanding liability being recorded under accrued liabilities on the condensed consolidated balance sheet as at December 31, 2009.

Purchase Obligations

At December 31, 2008 and December 31, 2009, the Company had obligations in relation to the purchase of manufactured products within the ALIGN business of \$0.4 million and \$0.1 million respectively.

Preferred Dividends

Pursuant to the terms of the Company's outstanding preferred stock, since inception through January 2009, the Company paid quarterly cash dividends when they have fallen due. However, as part of the program to reduce expenditure, on April 6, 2009, June 22, 2009, October 19, 2009 and January 7, 2010, the Board of Directors decided not to declare the quarterly cash dividend.

Legal proceedings

In the ordinary course of business the Company may be subject to legal proceedings and claims. The Company is not currently subject to any material legal proceedings.

12 Stockholders' Equity

Preferred stock

On November 3, 2004, the Company completed a public offering of 2,990,000 shares of its 6% convertible exchangeable preferred stock (the Preferred Stock) at \$10.00 per share, including the shares sold to the underwriters pursuant to the over-allotment option granted in connection with the offering. Net proceeds from the offering, after deducting underwriting discounts and offering-related expenses, totaled \$27.5 million.

Dividends on the Preferred Stock are cumulative from the date of original issuance at the annual rate of 6% of the liquidation preference of the Preferred Stock, payable quarterly on the first day of February, May, August and November, commencing February 1, 2005. Since inception until April 6, 2009, the Company paid these dividends when due. However, as part of the Company's program to reduce expenditure, on April 6, 2009, June 22, 2009, October 19, 2009 and January 7, 2010, the Company's Board of Directors resolved to suspend payment of, but continue to accumulate, the cash dividend. The Board of Directors will continue to evaluate the payment of a quarterly cash dividend on a quarterly basis. Any dividends must be declared by the Company's Board of Directors and must come from funds that are legally available for dividend payments. The Preferred Stock has a liquidation preference of \$10 per share, plus accrued and unpaid dividends. Each quarterly dividend distribution totals \$0.3 million.

The Preferred Stock is convertible at the option of the holder at any time into the Company's common stock at a conversion rate of approximately 0.42553 shares of common stock for each share of Preferred Stock, based on a price of \$23.50 after giving effect to the one for ten reverse stock split of Xcyte's common stock pursuant to the Stock Purchase. In the year ended December 31, 2004, holders voluntarily converted 910,187 shares of Preferred Stock into 3,873,124 shares of common stock and in the year ended December 31, 2005, holders voluntarily converted 33,000 shares of preferred stock into 140,425 shares of common stock (before giving effect to the one for ten reverse stock split of Xcyte's common stock). During 2007, 2008 and 2009 no shares of Preferred Stock were converted into common stock. The Company has reserved 870,980 shares of common stock for issuance upon conversion of the remaining shares of Preferred Stock outstanding at December 31, 2009.

The Company may automatically convert the Preferred Stock into common stock if the closing price of the Company's common stock has exceeded \$35.25, which is 150% of the conversion price of the Preferred Stock, for at least 20 trading days during any 30-day trading period, ending within five trading days prior to notice of automatic conversion. To date, the Company has not elected to automatically convert the Preferred Stock in whole or part into common stock.

Prior to November 3, 2007, the Company was required to make an additional payment on the Preferred Stock equal to the aggregate amount of dividends that would have been payable on the Preferred Stock through November 3, 2007, less any dividends already paid on the Preferred Stock, for each Preferred Stock converted to the Company's common stock, whether at the option of the holder or the Company, the "Make-Whole Dividend Payment". This additional payment was payable in cash or, at the Company's option, in shares of the Company's common stock, or a combination of cash and shares of common stock. The Company issued 81,927 shares of common stock (before giving effect to the one for ten reverse stock split of Xcyte's common stock) to converting holders in 2004 and 2005 in satisfaction of this additional payment.

In accordance with Statement of ASC 815, the Company was required to separate and account for, as an embedded derivative, the Make-Whole Dividend Payment feature of the Preferred Stock. As an embedded derivative instrument, the Make-Whole Dividend Payment feature was measured at fair value and reflected as a liability. Changes in the fair value of the derivative were recognized as a gain or loss in the consolidated statement of operations as a component of other income (expense). Since this feature lapsed on November 3, 2007, the liability was reduced to \$0. During 2007, the Company recorded a charge of \$0.1 million on the consolidated statement of operations.

From November 6, 2007, the Company may, at its option, redeem the Preferred Stock in whole or in part, out of funds legally available at the redemption prices per share stated below, plus an amount equal to accrued and unpaid dividends up to the date of redemption:

Year from November 1, 2009 to October 31, 2010	\$ 10.30
Year from November 1, 2010 to October 31, 2011	\$ 10.24
Year from November 1, 2011 to October 31, 2012	\$ 10.18
Year from November 1, 2012 to October 31, 2013	\$ 10.12
Year from November 1, 2013 to October 31, 2014	\$ 10.06
November 1, 2014 and thereafter	\$ 10.00

The Preferred Stock is exchangeable, in whole but not in part, at the option of the Company on any dividend payment date beginning on November 1, 2005 (the "Exchange Date") for the Company's 6% Convertible Subordinated Debentures ("Debentures") at the rate of \$10 principal amount of Debentures for each share of Preferred Stock. The Debentures, if issued, will mature 25 years after the Exchange Date and have terms substantially similar to those of the Preferred Stock.

The Preferred Stock has no maturity date and no voting rights prior to conversion into common stock, except under limited circumstances.

Common Stock

March 2006 Stock Purchase Agreement

In March 2006, in connection with the Stock Purchase Agreement, the Company issued 7,761,453 shares of common stock (after adjustment for a 1 for 10 reverse stock split which occurred on March 27, 2006) to Cyclacel Group plc which represented 79.7% of the outstanding shares of the Company's common stock.

April 2006 Securities Purchase Agreement

On April 26 2006, the Company entered into a Securities Purchase Agreement pursuant to which it sold to certain investors, for an aggregate purchase price of \$45.3 million, 6,428,572 shares of its common stock and warrants to purchase up to 2,571,429 additional shares of its common stock. The purchase price for the common stock and the exercise price for the warrants is \$7.00 per share. Investors in the financing paid an additional purchase price equal to \$0.125 per warrant or an additional \$0.05 for each share underlying the warrants. The warrants became exercisable six months after the closing and have an expiration date seven years thereafter. As of December 31, 2009, all warrants are outstanding.

February 2007 Registered Direct Offering

On February 16, 2007, the Company raised \$36.0 million in gross proceeds, before deducting placement agent fees and offering expenses of \$2.6 million, in a registered direct offering through the sale of shares of the Company's common stock and warrants. The Company entered into subscription agreements with these investors pursuant to which it sold approximately 4.2 million units, each unit consisting of one share of common stock and a seven-year warrant to purchase 0.25 shares of common stock, at a purchase price of \$8.47125 per unit. The purchase price for the shares and the exercise price for the warrants was \$8.44 per share, the closing bid price for the Company's common stock on February 12, 2007. Investors paid \$0.125 per warrant. The Company issued 4,249,668 shares of common stock and warrants to purchase 1,062,412 shares of common stock. As of December 31, 2009, all of the warrants remain outstanding.

The warrants issued to the investors are being accounted for as a liability in accordance with ASC 840. At the date of the transaction, the fair value of the warrants of \$6.8 million was determined utilizing the Black-Scholes option pricing model utilizing the following assumptions: risk free interest rate 4.58%, expected volatility 85%, expected dividend yield 0%, and a remaining contractual life of 6.88 years. The value of the warrant shares is being marked to market each reporting period as a derivative gain or loss on the consolidated statement of operations until exercised or expiration. At December 31, 2008 and 2009, the fair value of the warrants determined utilizing the Black-Scholes option pricing model was approximately \$43,000 and approximately \$0.3 million, respectively. The fair value at December 31, 2009 reflects the increase in the Company's common stock price, risk free rate of return and the remaining expected term of the warrants. During 2008, the Company recognized the change in the value of warrants of approximately \$3.5 million as a gain on the consolidated statement of operations. During 2009, the Company recorded the change in the value of warrants of \$0.3 million as a loss on the consolidated statement of operations.

July 2009 Registered Direct Financing

On July 29, 2009, the Company sold its securities to certain institutional investors consisting of 4,000,000 units in a registered direct offering (the Offering) at a purchase price of \$0.85 per unit (each, a Unit). Each Unit consisted of (i) one share of the Company's common stock, par value \$0.001 per share (the Common Stock), (ii) one warrant to purchase 0.625 of one share of Common Stock (a Series I Warrant) and (iii) one warrant to purchase 0.1838805 of one share of Common Stock (a Series II Warrant). The Series I Warrants have a seven-month term from the date of issuance, are exercisable beginning six months from the date of issuance and will be exercisable at an exercise price of \$1.00 per share of Common Stock. As of December 31, 2009, all of the Series I Warrants remain outstanding. The Series II Warrants have a five-year term from the date of issuance, are exercisable beginning six months from the date of issuance and will be exercisable at an exercise price of \$1.00 per share of Common Stock. As of December 31, 2009, all of the Series II Warrants remain outstanding. The sale of the Units was made pursuant to Subscription Agreements, dated July 23, 2009, with each of the investors. The net proceeds to the Company from the sale of the Units, after deducting for the Placement Agent's fees and offering expenses, were approximately \$2.9 million.

As of December 31, 2009, the warrants issued to the investors have been classified as equity in accordance with ASC 815. The transaction date fair value of the Series I Warrants of \$1.0 million was determined utilizing the Black-Scholes option pricing model utilizing the following assumptions: risk free interest rate 0.26%, expected volatility 125%, expected dividend yield 0%, and a remaining contractual life of 0.58 years. The transaction date fair value of the Series II Warrants of \$0.6 million was determined utilizing the Black-Scholes option pricing model utilizing the following assumptions: risk free interest rate 2.69%, expected volatility 90%, expected dividend yield 0%, and a remaining contractual life of 5.00 years.

December 2007 Committed Equity Financing Facility (CEFF)

On December 10, 2007 and amended on November 24, 2009, Cyclacel entered into a CEFF with Kingsbridge, in which Kingsbridge committed to purchase the lesser of 4,084,590 shares of common stock or \$60 million of common stock from Cyclacel of capital over a three-year period. Under the terms of the agreement, Cyclacel will determine the exact timing and amount of any CEFF financings, subject to certain conditions. All amounts drawn down under the CEFF will be settled via the issuance of Cyclacel's common stock. Cyclacel may access capital under the CEFF in tranches of either (a) 2% of Cyclacel's market capitalization at the time of the draw down or (b) the lesser of (i) 3% of Cyclacel's market capitalization at the time of the draw down and (ii) an alternative draw down amount based on the product of (A) the average trading volume of the 30-day trading period preceding the draw down excluding the five highest and five lowest trading days during such period, (B) the volume-weighted average trading price (VWAP) on the trading day prior to the notice of draw down, (C) the number of days during the draw down period and (D) 85%, subject to certain conditions. Each tranche will be issued and priced over an eight-day pricing period. Kingsbridge will purchase shares of common stock pursuant to the CEFF at discounts ranging from 10% to 20% depending on the average market price of the common stock during the eight-day pricing period, provided that the minimum acceptable purchase price for any shares to be issued to Kingsbridge during the eight-day period is determined by the higher of \$0.40 or 90% of Cyclacel's common stock closing price the day before the commencement of each draw down. During December 2009 and January 2010, the Company sold an aggregate of 1,583,626 shares of its common stock to Kingsbridge under the terms of the CEFF with Kingsbridge, dated as of December 10, 2007, as amended, in consideration of an aggregate of \$1.3 million, of which approximately \$1.0 million was received in 2009 with the balance of \$0.3 million in respect of common shares subscribed but unissued at December 31, 2009, received by the Company in January 2010.

In connection with the Amendment, the Company issued an amended and restated warrant to Kingsbridge to purchase 175,000 shares of its common stock at an exercise price of \$1.40 per share, (from an original exercise price of \$7.17) which represents 175% of the closing bid price of our common stock on the date prior to the date on which the Amendment was signed. The warrant amends and restates the original warrant issued by the Company to Kingsbridge in connection with the CEFF. No other changes were made to the original warrant. As a result of the change in exercise price, the Company recorded an expense of approximately \$44,000. The warrant will become exercisable six months from the date of the agreement and will remain exercisable, subject to certain exceptions, for a period of five years thereafter. As of December 31, 2007 and 2008, the warrants issued to the investors have been classified as equity in accordance with ASC 840. The transaction date fair value of the warrants of \$0.6 million was determined utilizing the Black-Scholes option pricing model utilizing the following assumptions: risk free interest rate 3.605%, expected volatility 70%, expected dividend yield 0%, and a remaining contractual life of 5.5 years.

Common Stock Warrants

The following table summarizes information about warrants outstanding at December 31, 2009:

	Expiration	Common Shares	Weighted Average Exercise Price
Issued in Connection With	Date	Issuable	
March 2006 stock issuance	2013	2,571,429	7.00
February 2007 stock issuance	2014	1,062,412	8.44
December 2007 CEFF	2012	175,000	1.40
July 2009 Series I stock issuance	2010	2,500,000	1.00
July 2009 Series II stock issuance	2014	735,522	1.00
Total		7,044,363	4.32

Exercise of Stock Options

During 2007, 25,508 shares of common stock were issued from the exercise of stock options resulting in proceeds of \$0.2 million. There were no exercises of stock options during 2008. During 2009, 17,180 shares of common stock were issued from the exercise of stock options resulting in proceeds of approximately \$7,000.

13 Stock-Based Compensation Arrangements

The Company adopted ASC 718 on January 1, 2006 using the modified prospective method of transition as detailed in Note 2 Summary of significant accounting policies.

ASC 718 requires compensation expense associated with share-based awards to be recognized over the requisite service period, which for the Company is the period between the grant date and the date the award vests or becomes exercisable. Most of the awards granted by the Company (and still outstanding), vest ratably over four years, with 1/4 of the award vesting one year from the date of grant and 1/48 of the award granted vesting each month thereafter. However, a large grant of awards issued in June 2006 vests (a) two-thirds upon grant, and (b) one-third over a one-year vesting period. In addition, certain awards made to executive officers vest over three to five years, depending on the terms of their employment with the Company.

Effective January 1, 2006, the Company has elected to recognize all share-based awards issued after the adoption of ASC 718 under the straight-line attribution method. ASC 718 requires forfeitures to be estimated at the time of grant and revised, if necessary, in subsequent periods if actual forfeitures differ from those estimates. This analysis is evaluated quarterly and the forfeiture rate adjusted as necessary. Ultimately, the actual expense recognized over the vesting period is based on only those shares that vest.

Stock based compensation has been reported within expense line items on the consolidated statement of operations for 2007, 2008 and 2009 as shown in the following table:

	Year ended December 31, 2007	Year ended December 31, 2008 (\$000s)	Year ended December 31, 2009
Research and development	837	736	271
Selling, general and administrative	896	962	539
Stock-based compensation costs before income taxes	\$ 1,733	\$ 1,698	\$ 810

2006 Plans

On March 16, 2006, Xcyte stockholders approved the adoption of the 2006 Plans, under which Cyclacel, may make equity incentive grants to its officers, employees, directors and consultants. On May 14, 2008, at the Company annual stockholders meeting the stockholders increased the number of shares reserved under the 2006 Plans to 5.2 million shares of common stock from 3.0 million shares of common stock.

During 2006, the Company granted 829,079 stock options under the 2006 Plans, two-thirds of which vested immediately on grant. The remaining unvested options became fully vested 12 months following the date of grant of the options on June 13, 2007.

The total fair value of all options granted in 2006 under the 2006 Plans was \$5.7 million, of which \$5.2 million has been recognized as of December 31, 2009. During 2007, the Company granted approximately 1.3 million options to employees and directors with a grant date fair value of \$3.3 million, of which \$2.2 million has been expensed. During 2008, the Company granted approximately 1.5 million options to employees and directors with a grant date fair value of \$0.7 million, of which \$0.4 million has been expensed. During 2009, the Company granted approximately 0.2 million options to employees and directors with a grant date fair value of \$0.1 million, of which approximately \$28,000 has been expensed. As of December 31, 2009, the total remaining unrecognized compensation cost related to the non-vested stock options amounted to approximately \$1.8 million, which will be amortized over the weighted-average remaining requisite service period of 3.25 years.

During 2008 and 2009, the Company did not settle any equity instruments with cash.

The Company received \$7,000 from the exercise of 17,180 stock options during 2009. The total intrinsic value of options exercised during 2009 was approximately \$11,000. No options were exercised in 2008. The weighted average grant-date fair value of options granted during 2008 and 2009 was \$0.67 and \$0.39, respectively.

Acceleration of Options

Prior to the Stock Purchase, Group operated a number of share option plans, which provided the opportunity to all eligible individuals, including employees of Cyclacel, to participate in the potential growth and success of Group. These were the 1997 Plan, the 2000 Plan, the SEIP, the Discretionary Plan, the Cyclacel Group Plc Savings Related Share Option Plan and the Cyclacel Group Plc Restricted Share and Co- Investment Plan, collectively referred to as the Cyclacel Plans . Options had only been issued under the 1997 Plan, the 2000 Plan, the Discretionary Plan and the SEIP.

Similarly, Xcyte operated a number of share option plans, the Amended and Restated 2003 Directors Stock Option Plan (2003 Directors Plan), the Amended and Restated 1996 Stock Option Plan (1996 Plan) and the 2003 Stock Plan (2003 Plan), collectively referred to as the Xcyte Plans .

The completion of the Stock Purchase and the members voluntary liquidation of Group variously caused an acceleration of vesting of options according to the terms of each of the Plans as described below.

Cyclacel Plans

The vesting of all options granted pursuant to the 1997 Plan, 2000 Plan and Discretionary Plan were accelerated on the members voluntary liquidation of Cyclacel Group plc. As a result of this acceleration, any holder of options granted pursuant to these Plans had the right to exercise 100% of the options held by such holder pursuant to such plan. However, prior to the completion of the Stock Purchase and liquidation of Cyclacel Group plc all Cyclacel employees waived their rights to exercise any options held by them. The number of options of common stock that would have become fully vested as a result of the accelerated vesting provisions of the Plans was 1,369,757. However, as the liquidation of Cyclacel Group plc was probable at the time the options were waived and the liquidation caused the acceleration of the vesting of the options, the previously unrecognized compensation cost associated with these awards was charged as employee compensation immediately prior to the

consummation of the Stock Purchase on March 27, 2006. Options granted pursuant to the Senior Executive Incentive Plan only became vested on occurrence of certain trigger events and the passage of time thereafter; moreover, there were no provisions for an acceleration of vesting on liquidation. Directors benefiting from this plan waived their rights to any options held by them and concurrently the directors were issued with restricted stock as detailed below.

Accordingly, as the options had never vested and were improbable of vesting even absent the liquidation, no compensation charge associated with these awards has been charged as employee expense in this period. There were no Cyclacel common stock options outstanding on completion of the Stock Purchase or liquidation of Group. As of March 16, 2006, no options are granted under the 1997 Plan, 2000 Plan and Discretionary Plan.

In the first quarter of 2006 prior to the completion of the Stock Purchase, 1,750,000 shares of Group preferred stock were granted to certain directors, officers and a former director. These shares converted to 648,412 shares of restricted common stock of the Company on completion of the Stock Purchase. Because the shares granted were not subject to additional future vesting or service requirements, the stock-based compensation expense of \$5.2 million recorded during 2006 constituted the entire grant-date fair value of this award, and no subsequent period charges have been recorded. The stock was restricted only in that it could not be sold for a specified period of time. There were no vesting requirements. The fair value of the stock granted was \$7.99 per share based on the market price of the Company's common stock on the date of grant. There were no discounts applied for the effects of the restriction, since the value of the restriction is considered to be de minimis. Certain of the restricted stock was issued as a replacement for the previously held stock-based compensation awards and the incremental fair value of the restricted stock over the original award at the date of replacement was charged to expense during the year ended December 31, 2006. Of the \$5.2 million charge, \$3.2 million was reported as a component of research and development expense and \$2.0 million was reported as a component of general and administrative expense.

Xcyte Plans

Upon closing of the Stock Purchase, the vesting of 43,491 options of common stock granted pursuant to the 2003 Directors Plan, the 1996 Plan and the 2003 Plan were immediately accelerated and became fully vested.

Since March 16, 2006, no further options have been issued under the former Xcyte Plans, those being, 1996 Stock Option Plan, 2003 Stock Plan, 2003 Directors Stock Option Plan and 2003 Employee Stock Purchase Plan.

In connection with the approval of the equity incentive plan the holders of Xcyte common stock approved the partial termination of Xcyte's 2003 Employee Stock Purchase Plan, Amended and Restated 1996 Stock Option Plan, Amended and Restated 2003 Directors' Stock Option Plan and 2003 Stock Option Plan. As a result of such partial termination, no options have been issued under such plans. However, such partial termination has not affected the rights of holders of stock options outstanding under such stock option plans.

A summary of the share option activity and related information is as follows:

	Number of options outstanding	Weighted average exercise price	Weighted average remaining contractual term (years)	Aggregate intrinsic value
Cyclacel Pharmaceuticals, Inc.				
Balance as of December 31, 2007	2,592,346	\$ 6.39	9.14	
Granted	1,469,575	\$ 1.18		
Exercised				
Cancelled/forfeited	(387,022)	\$ 5.92		
Options outstanding at December 31, 2008	3,674,899	\$ 4.36	8.74	2
Granted	221,000	\$ 0.39		
Exercised	(17,180)	\$ 0.43		7
Cancelled/forfeited	(528,843)	\$ 3.76		
Options outstanding at December 31, 2009	3,349,876	\$ 4.21	7.76	698

Edgar Filing: COCCIO CHRISTOPHER L - Form 4

Unvested at December 31, 2009	1,381,616	\$	2.62	8.43	484
Vested and exercisable at December 31, 2009	1,968,260	\$	5.34	7.79	

The following table summarizes information about options outstanding at December 31, 2009:

Exercise price	Number outstanding	Weighted Average remaining contractual life	Number exercisable
\$ 0.31 1.98	1,176,146	8.92	365,676
2.15 4.95	223,667	8.04	107,134
5.26 5.81	619,030	7.79	324,738
6.30 8.30	1,309,033	6.71	1,148,712
15.00 45.30	22,000	5.12	22,000
	3,349,876		1,968,260

The fair value of the stock options granted is calculated at each reporting date using the Black-Scholes option-pricing model as prescribed by ASC 718 using the following assumptions:

	Year ended December 31, 2007		Year ended December 31, 2008		Year ended December 31, 2009	
Expected term (years)	4.25	6.00	4.25	6.00	0.75	5 Yrs
Risk free interest rate	3.28	5.07%	1.54	3.76%	0.325	.84%
Volatility	65	80%	45	75%	65	169%
Dividends	0.00%		0.00%		0.00%	
Resulting weighted average grant date fair value	\$3.68		\$0.68		\$0.39	

The expected term assumption was estimated using past history of early exercise behavior and expectations about future behaviors. Due to the Company's limited existence of being a public company, the expected volatility assumption was based on the historical volatility of peer companies over the expected term of the option awards. Estimates of pre-vesting option forfeitures are based on the Company's experience. Currently the Company uses a forfeiture rate of 20 - 75% depending on when and to whom the options are granted. The Company adjusts its estimate of forfeitures over the requisite service period based on the extent to which actual forfeitures differ, or are expected to differ, from such estimates. Changes in estimated forfeitures are recognized through a cumulative adjustment in the period of change and may impact the amount of compensation expense to be recognized in future periods. During both quarters ended September 30, 2009 and June 30, 2009 the Company revised the forfeiture rates because actual forfeiture rates were higher than that previously estimated primarily due to the lapsing of stock option grants on the termination of employees. During 2009, the Company recognized a net cumulative charge of approximately \$0.5 million with respect to the revised forfeiture rates.

The weighted average risk-free interest rate represents interest rate for treasury constant maturities published by the Federal Reserve Board. If the term of available treasury constant maturity instruments is not equal to the expected term of an employee option, Cyclacel uses the weighted average of the two Federal Reserve securities closest to the expected term of the employee option.

The Company received approximately \$7,000 from the exercise of 17,180 options during 2009. There were no stock option exercises for the year ended December 31, 2008. The Company received \$0.2 million from the exercise of 25,508 options during 2007. No income tax benefits were recorded because ASC 718 prohibits recognition of tax benefits for exercised stock options until such benefits are realized. As Cyclacel presently has tax loss carry forwards from prior periods and expect to incur tax losses in 2007 and 2009, the Company was not be able to benefit from the deduction for exercised stock option in the current reporting period.

Cash used to settle equity instruments granted under share-based payment arrangements amounted to \$0 during all periods presented.

In accordance with the terms of a retirement agreement with a former employee, the Company agreed to extend the period during which the former employee would be entitled to exercise vested stock options to purchase Cyclacel's common stock from thirty (30) days following the effective date of his retirement, January 8, 2008, to thirty six (36) months following such effective date. The Company recorded a one time compensation expense related to the modification of the exercise period of \$0.1 million for the three months ended March 31, 2008.

Related to the workforce reduction in the second and third quarters of 2009, the Company amended the exercise period to which the employees would be able to exercise their vested stock options from thirty days post termination date, per the option agreement terms, to nine months resulting in a charge to condensed consolidated statement of operations of approximately \$0.1 million. In addition, the Company allowed the individuals to continue to vest their stock options and restricted stock units until November 18, 2009 as if they were still employed in recognition of their past work provided to the Company.

Restricted Stock

In November 2008, the Company issued restricted common stock to an employee subject to certain forfeiture provisions. Specifically, one quarter of the award vests one year from the date of grant and 1/48 of the award effectively vests each month thereafter. This restricted stock grant is accounted for at fair value at the date of grant and an expense is recognized during the vesting term. Summarized information for restricted stock grants for the year ended December 31, 2009 is as follows:

	Restricted Stock Units	Weighted Average Grant Date Value Per Share	
Non-vested at December 31, 2007			
Granted	50,000	\$	0.44
Non-vested at December 31, 2008	50,000	\$	0.44
Granted			
Vested	(13,542)	\$	0.44
Cancelled			
Non-vested at December 31, 2009	36,458	\$	0.44

Restricted Stock Units

Restricted stock units were issued to senior executives of the Company in November 2008, which entitle the holders to receive a specified number of shares of the Company's common stock over the four year vesting term. A restricted stock unit grant is accounted for at fair value at the date of grant which is equivalent to the market price of a share of the Company's common stock, and an expense is recognized during the vesting term. There were no restricted stock unit grants prior to November 2008. Summarized information for restricted stock grants for the year ended December 31, 2009 is as follows:

	Restricted Stock Units	Weighted Average Grant Date Value Per Share
Non-vested at December 31, 2007		
Granted	91,700	\$ 0.44
Non-vested at December 31, 2008	91,700	\$ 0.44
Granted		
Vested	(24,488)	\$ 0.44
Cancelled	(12,525)	\$ 0.44
Non-vested at December 31, 2009	54,687	\$ 0.44

14 Restructuring

On September 16, 2008, the Company announced a revision of its operating plan that concentrates the Company's resources on the advancement of its lead drug, sapacitabine, while maintaining the Company's core competency in drug discovery and cell cycle biology. The plan reduced the workforce across all locations by 25 people. The Company recorded approximately \$0.4 million for severance payments and \$0.1 million of accelerated depreciation for assets that will no longer be utilized. All severance payments were paid as of December 31, 2008. During 2009, the Company recorded approximately \$0.4 million for severance payments all of which were paid as of December 31, 2009. As part of the plan the Company vacated its laboratory facility in Cambridge, England. The Company assigned the lease of its redundant Cambridge research facility back to the landlord and, in accordance with the terms of the lease, incurred a net charge, incorporating a surrender fee, of \$0.1 million to effect this. In June 2009, the Company further reduced its workforce across all locations by 26 people making a total reduction of 51 people (or 63% of the workforce) since September 2008. An asset impairment amounting to \$0.2 million was also charged to the consolidated statement of operations as a result of assets being identified that were no longer being utilized.

As a result of strategic decisions taken by Xcyte in March 2005 the Company restructured its operations and reduced its workforce. In connection with this restructuring Xcyte recorded charges and made provisions for termination benefits, lease restructuring, asset impairment and sales tax assessment.

The table below presents a summary of and reconciliation of those provisions for the years ended December 31, 2008 and 2009:

	Lease restructuring charges \$000	Sales tax assessment \$000	Total \$000
Balance at December 31, 2007	2,995	270	3,265
Cash payments	(1,106)		(1,106)
Adjustments for lease-related deferred expenses and liabilities	202		202
 Balance at December 31, 2008	 2,091	 270	 2,361
Cash payments	(1,156)	(372)	(1,528)
Adjustments for lease-related deferred expenses and liabilities	127		125
Adjustment for sales tax assessment		102	102
Balance at December 31, 2009	1,062		1,062
 Current	 1,062		 1,062

Long term liabilities

Lease restructuring charges

Under the stock purchase agreement entered into with Xcyte Therapies, Cyclacel, assumed the accrued restructuring liability in relation to the Bothell manufacturing facility. The lease term on this space expires December 2010. The liability is computed as the present value of the difference between the remaining lease payments due less the estimate of net sublease income and expenses. This represents the Company's best estimate of the fair value of the liability as determined under ASC 420. Subsequent changes in the liability due to accretion are recognized in interest expense, and changes in estimates of sublease assumptions, etc. are recognized as adjustments to restructuring charges in future periods.

The Company records payments of rent related to the Bothell facility as a reduction in the amount of the accrued restructuring liability. Accretion expense, which is also reflected as a restructuring charge, is recognized due to the passage of time. Based on current projections of estimated sublease income and a discount rate of 7.8%, the Company expects to record additional accretion expense of approximately \$0.2 million over the remaining term of the lease. As of December 31, 2009, the Bothell accrued restructuring liability was \$1.1 million.

Sales tax assessment

In connection with the abandonment of the leasehold improvements in the Seattle and Bothell facilities and the sale of assets in late 2005 the Company has been subjected to a state sales tax audit by the Department of Revenue of the State of Washington. The total tax liability assessed by the State of Washington was approximately \$1 million. During the fourth quarter of 2009, the Company paid \$0.5 million, including interest charges of \$0.1 million, to settle the claim and the assessment by the Department of Revenue of the State of Washington was dismissed. The Company had accrued \$0.4 million on its consolidated balance sheet and the difference of \$0.1 million was expensed within the selling, general and administrative line of the consolidated income statement.

The Company records costs and liabilities associated with exit and disposal activities, when certain criteria have been met in accordance with ASC 420, at fair value in the period the liability is incurred. The Company's restructuring and integration plan is subject to continued future refinement as additional information becomes available.

15 Pension Plans

The Company operates a defined contribution group personal pension plan for all of its U.K. based employees. Company contributions to the plan totaled approximately \$0.2 million in each of the years ended December 31, 2007

and 2008 and 2009, respectively.

401(k) Plan

The 401(k) Plan provides for matching contributions by the Company in an amount equal to the lesser of 100% of the employee's deferral or 6% of the U.S. employee's qualifying compensation. The 401(k) Plan is intended to qualify under Section 401(k) of the Internal Revenue Code, so that contributions to the 401(k) Plan by employees or by the Company, and the investment earnings thereon, are not taxable to the employees until withdrawn. If the 401(k) Plan qualifies under Section 401(k) of the Internal Revenue Code, the contributions will be tax deductible by the Company when made. Company employees may elect to reduce their current compensation by up to the statutorily prescribed annual limit of \$16,500 if under 50 years old and \$22,000 if over 50 years old in 2010 and to have those funds contributed to the 401(k) Plan. For each of the years ended December 31, 2007, 2008 and 2009, the Company made contributions of approximately \$0.1 million to the 401(k) Plan.

16 Taxes

In the accompanying Consolidated Statements of Operations, Loss before taxes includes the following components for the years ended December 31, 2007, 2008 and 2009:

	Year ended December 31, 2007 \$000	Year ended December 31, 2008 \$000	Year ended December 31, 2009 \$000
Domestic	(5,448)	(11,337)	(3,013)
Foreign	(20,646)	(30,798)	(17,505)
Total loss before taxes	(26,094)	(42,135)	(20,518)

The benefit for income taxes consists of the following:

	Year ended December 31, 2007 \$000	Year ended December 31, 2008 \$000	Year ended December 31, 2009 \$000
Current domestic	(2)	(4)	(12)
Current foreign	2,043	1,753	960
Current total	2,041	1,749	948

The Company has made a taxable loss in each of the operating periods since incorporation. The income tax credits of \$2.0 million, \$1.7 million and \$0.9 million for the years ended December 31, 2007, 2008 and 2009 respectively, represent U.K. research and development tax credits receivable against such expenditures in the United Kingdom. A reconciliation of the (benefit) provision for income taxes with the amount computed by applying the statutory federal tax rate to loss before income taxes is as follows:

	Year ended December 31, 2007 \$000	Year ended December 31, 2008 \$000	Year ended December 31, 2009 \$000
Loss before income taxes	(26,094)	(42,135)	(20,518)
Income tax expense computed at statutory federal tax rate	(8,872)	(14,361)	(6,976)
State income tax (net of federal benefit)	1	3	8
Disallowed expenses and non-taxable income	(3,005)	(1,939)	(773)
Tax losses	4,349	3,584	2,322
Research and development tax relief	(2,551)	(2,191)	(1,185)
Valuation allowance	7,272	11,161	4,605
Change in state tax rate	(268)		
Research and development tax credit rate difference	510	438	237
Foreign tax rate differential	525	1,556	814

(2,039)

(1,749)

(948)

Significant components of the Company's deferred tax assets are shown below:

	2008	2009
	\$000	\$000
Net operating loss carryforwards	35,140	42,534
Depreciation, amortization and impairment of property and equipment	2,178	1,996
Lease restructuring charges	817	399
Tax Credits	61	
Stock Options	582	775
Accrued Expenses	1,563	2,684
Other	110	67
Translation adjustment	(2,814)	(3,097)
Deferred Tax Assets	37,637	45,358
Valuation allowance for deferred tax assets	(37,637)	(45,358)

Net deferred taxes

Deferred income taxes reflect the net tax effect of temporary differences between the carrying amounts of assets and liabilities for financial reporting and tax purposes. A valuation allowance has been established, as realization of such assets is uncertain.

In certain circumstances, as specified in the Tax Reform Act of 1986, due to ownership changes, the Company's ability to utilize its net operating loss carryforwards may be limited. However, the Company's overseas subsidiary has, subject to agreement with the United Kingdom's H.M. Revenue & Customs, the following tax losses and accumulated tax losses available for carry forward against future operations, which under U.K. tax laws do not expire:

	2008	2009
	\$000	\$000
Accumulated tax losses	110,478	131,685

As of December 31, 2009 and 2008, the Company had federal, state and foreign net operating losses or (NOLs) of \$185.2 million and \$124.8 million, respectively and federal research and development credit carryforwards of approximately \$0.1 million and \$0.1 million, respectively, which will expire starting in 2022. The Company has federal net operating losses that will start to expire in 2027 and state net operating losses that will start expiring in 2023.

As required by ASC 740, the Company's management evaluated the positive and negative evidence bearing upon the realizability of its deferred tax assets, and has determined that it is not more likely than not that we will recognize the benefits of the deferred tax assets. Accordingly, a valuation allowance of approximately \$45.4 million has been established at December 31, 2009. The benefit of deductions from the exercise of stock options is included in the NOL carryforwards. The benefit from these deductions will be recorded as a credit to additional paid-in capital if and when realized through a reduction of cash taxes.

Utilization of the NOL and R&D credit carryforwards may be subject to a substantial annual limitation under Section 382 of the Internal Revenue Code of 1986 due to ownership change limitations that have occurred previously or that could occur in the future. These ownership changes may limit the amount of NOL and R&D credit carryforwards that can be utilized annually to offset future taxable income and tax, respectively. We have not currently completed a study to assess whether an ownership change has occurred, or whether there have been multiple ownership changes since our formation, due to the significant complexity and related cost associated with such study. There also could be additional ownership changes in the future which may result in additional limitations in the utilization of the carryforward NOLs and credits.

The Company adopted ASC 740 on January 1, 2007. The implementation of ASC 740 did not have a material impact on the Company's consolidated financial statements, results of operations or cash flows. Management has evaluated all significant tax positions at December 31, 2008 and 2009 concluding that there are no material uncertain tax positions. The tax year 2008 remains open to examination by major taxing jurisdictions to which the Company is subject, which are primarily in the United Kingdom and the United States, as carryforward attributes generated in years past may still be adjusted upon examination by the United Kingdom's H.M. Revenue & Customs, the Internal Revenue Service (IRS) or state tax authorities if they have or will be used in a future period. The Company is currently not under examination by the IRS or any other jurisdictions for any tax years. The Company recognizes both accrued interest and penalties related to unrecognized benefits in income tax expense. The Company has not recorded any interest and penalties on any unrecognized tax benefits since its inception.

17 Segment and Geographic Information

The Company has determined its reportable segments in accordance with ASC 280 through consideration of the Company's business activities and geographic area. The Company has concluded that it has one operating segment, being the discovery, development and commercialization of novel, mechanism-targeted drugs to treat cancer and other serious disorders, with development operations in two geographic areas, namely the United States and the United Kingdom.

Geographic information for the years ended December 31, 2007, 2008 and 2009 are as follows:

	2007	2008	2009
	\$000	\$000	\$000

18 Selected Quarterly Information (unaudited)

The following unaudited quarterly financial information includes, in management's opinion, all the normal and recurring adjustments necessary to fairly state the results of operations and related information for the periods presented. The effects of the correction of errors reported in Note 20 Restatement Net Loss Per Share Disclosure and Consolidated Statement of Cash Flows, are incorporated in the table below.

	For the three months ended			
	March 31, 2009	June 30, 2009	September 30, 2009	December 31, 2009
	\$000, except per share amounts			
Revenues	228	266	230	187
Loss before taxes	(5,421)	(7,278)	(3,329)	(4,490)
Net loss applicable to common shareholders	(5,370)	(7,352)	(3,431)	(4,645)
Net loss per share basic and diluted (1)	\$ (0.26)	\$ (0.36)	\$ (0.15)	\$ (0.19)

	For the three months ended			
	March 31, 2008	June 30, 2008	September 30, 2008	December 31, 2008
	\$000, except per share amounts			
Revenues	177	180	269	251
Loss before taxes	(6,927)	(8,969)	(18,058)	(8,181)
Net loss applicable to common shareholders	(6,559)	(8,851)	(17,954)	(8,249)
Net loss per share basic and diluted (1)	\$ (0.32)	\$ (0.43)	\$ (0.88)	\$ (0.40)

(1) The addition of loss per common share by quarter may not equal the total loss per common share for the year or year to date due to rounding.

19 Subsequent Events

In January, 2010, the Company announced that NASDAQ had notified us that we regained compliance with the minimum \$50 million market value of listed securities requirement and that it currently complies with all other applicable standards for continued listing on The NASDAQ Global Market.

In January, 2010, the Company completed the sale of 2,350,000 units in a registered direct offering at a purchase price of \$2.50 per unit to certain existing institutional investors of the Company for approximately \$5.9 million in gross proceeds. Each unit consisted of one share of its common stock and one warrant to purchase 0.30 of one share of the

Company's common stock at an exercise price of \$2.85 per share of common stock.

In January, 2010, the Company completed the sale of 2,850,000 units in a registered direct offering to certain institutional investors for approximately \$7.2 million in gross proceeds. Each unit was sold at a purchase price of \$2.51 per unit and consists of one share of the Company's common stock and one warrant to purchase 0.25 of one share of the Company's common stock. The warrants have a five-year term from the date of issuance, are exercisable beginning six months from the date of issuance and will be exercisable at an exercise price of \$3.26 per share of common stock.

In January, 2010, the Board of Directors of Cyclacel resolved to suspend the quarterly cash dividend on the Company's 6% Convertible Exchangeable Preferred Stock (Preferred Stock) with respect to the fourth quarter of 2009 that would have otherwise been payable on February 1, 2010.

During January and February 2010, the Company issued 2,618,266 shares of our common stock for gross proceeds of approximately \$2.6 million through the exercise of warrants.

During March 2010, the Company issued 239,396 shares of its common stock to a stockholder in exchange in exchange for the stockholder's delivery to the Company of 123,400 shares of the Company's outstanding Preferred Stock.

During March 2010, the Company issued 1,234,606 shares of its common stock to Kingsbridge for \$2.8 million.

20 Restatement Net Loss Per Share Disclosures and Consolidated Statement of Cash Flows*Net loss per share*

Throughout 2007, 2008 and 2009, the Company had outstanding 2,046,813 shares of 6% Convertible Exchangeable Preferred Stock (the **Preferred Stock**). The holders of the Preferred Stock are entitled to receive, when, as and if declared, a cash dividend at the annual rate of 6% of the liquidation preference of the Preferred Stock, which dividend is payable quarterly on the first day of February, May, August and November. Until April 6, 2009, the Company declared and paid these dividends. However, as part of the Company's operating plan to reduce expenditure, on April 6, 2009, June 22, 2009, October 19, 2009, January 7, 2010 and March 29, 2010, the Company's board of directors resolved not to declare payment of the cash dividend, which unpaid dividends are accrued.

Although the Company accrued for the unpaid dividends in its consolidated financial statements, it did not include the accrued amount when calculating basic and diluted loss per share of common stock. Similar errors occurred in 2007 and 2008 in the net loss per share disclosure.

The following tables set forth the effects of the restatement relating to net loss per share on affected line items within the Company's previously reported Consolidated Statements of Operations for the years 2007, 2008, and 2009. The restatement has no effect on net cash flows, the reported net loss or the consolidated balance sheet in each of the years. Effect on Consolidated Statements of Operations

	Year ended December 31		
	2007	2008	2009
	(\$000s except for per share amounts)		
Net loss as reported	(24,053)	(40,386)	(19,570)
Restatement changes			
Less: preferred dividends	(307)	(1,227)	(1,228)
Net loss attributable to common shareholders	(24,360)	(41,613)	(20,798)
Weighted-average shares outstanding during the period	19,873,911	20,433,129	22,196,840
Loss per share (basic and diluted) as reported	(\$1.21)	(\$1.98)	(\$0.88)
Restatement changes	(\$0.02)	(\$0.06)	(\$0.06)
Basic and diluted, as restated	(\$1.23)	(\$2.04)	(\$0.94)

Cash flows disclosures

There were errors related to the presentation and disclosure of the Company's Preferred Stock dividends in the statement of cash flows in 2007 through and including 2009. In 2009, the Preferred Stock dividend of \$307,000 paid on February 1, 2009 was disclosed incorrectly in the statement of cash flows within Net cash used in operating activities and should have been disclosed within Financing activities. Other disclosure errors were related to the terms of the make-whole dividend payment feature of the Company's Preferred Stock. This make-whole dividend payment feature was considered to be an embedded derivative and was recorded on the balance sheet at fair value as a current liability. As a consequence of this feature, which expired in November 2007, amounts paid with respect to the period of the make-whole provision should be disclosed in Net cash used in operating activities rather than financing activities. Additionally, in the Supplemental cash flow information; Schedule of non-cash items, we have now disclosed accrued dividends on Preferred Stock for 2007 through and including 2009. All of the errors described above have been corrected in the consolidated statements of cash flows. These errors had no effect on the net cash flows or any impact on the consolidated balance sheet or consolidated statement of operations.

Item 9T. Controls and Procedures

(a) *Disclosure Controls*

We maintain disclosure controls and procedures that are designed to ensure that information required to be disclosed in our Exchange Act reports is recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and forms and that such information is accumulated and communicated to our management, including our Chief Executive Officer and Chief Financial Officer, as appropriate, to allow for timely decisions regarding required disclosure. As described below, a material weakness was identified in our internal control over financial reporting. Exchange Act Rule 12b-2 (17 CFR 240.12b-2) and Rule 1-02 of Regulation S-X (17 CFR 210.1-02) define a material weakness as a deficiency, or combination of deficiencies, in internal control over financial reporting such that there is a reasonable possibility that a material misstatement of the registrant's annual or interim financial statements will not be prevented or detected on a timely basis. As a result of the material weakness, our chief executive officer and chief financial officer have concluded that, as of December 31, 2009, the end of the period covered by this report, our disclosure controls and procedures were not effective at a reasonable assurance level.

(b) *Management's Annual Report on Internal Control Over Financial Reporting*

Internal control over financial reporting refers to the process designed by, or under the supervision of, our Chief Executive Officer and Chief Financial Officer, and effected by our Board of Directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles, and includes those policies and procedures that:

1. Pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the Company;
2. Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and
3. Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as such term is defined in Exchange Act Rules 13a-15(f) and 15d-15(f). Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), as of December 31, 2009.

Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process, and it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of our annual or interim financial statements will not be prevented or detected on a timely basis.

In the Company's Annual Report on Form 10-K for the year ended December 31, 2009, filed on March 29, 2010, management concluded that our internal control over financial reporting was effective as of December 31, 2009. Subsequently, our management identified a deficiency in respect of our internal control over financial reporting, specifically in our controls over the computation of net loss per share and the financial statement presentation of our preferred stock dividends in the statement of cash flows that constitutes a material weakness as described in SEC's guidance regarding Management's Report on Internal Control Over Financial Reporting as of December 31, 2009. As a result of this deficiency, the financial statements included in Form 10-K for the year ended December 31, 2009, included errors related to the presentation and disclosure of our preferred stock dividends in the net loss per share disclosure and in the statement of cash flows. As a result of this material weakness, management concluded that we did not maintain effective internal control over financial reporting as of December 31, 2009, based on the criteria established in *Internal Control - Integrated Framework*, issued by the COSO.

Ernst & Young LLP, an independent registered public accounting firm, has audited our consolidated financial statements and has also issued an attestation report on the effectiveness of our internal controls over financial reporting as of December 31, 2009 which is set forth below:

(c) Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders of Cyclacel Pharmaceuticals, Inc.

We have audited Cyclacel Pharmaceuticals, Inc.'s internal control over financial reporting as of December 31, 2009 based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Cyclacel Pharmaceuticals, Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Annual Report on Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our report dated March 29, 2010, we expressed an unqualified opinion that Cyclacel Pharmaceuticals, Inc. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2009, based upon the COSO criteria. Management has subsequently determined that a deficiency in internal controls relating to the computation of Cyclacel Pharmaceuticals, Inc.'s net loss per share and the presentation of its preferred stock dividends in the statement of cash flows existed as of the previous assessment date, and has further concluded that such deficiency represented a material weakness as of December 31, 2009. As a result, management revised its assessment, as presented in item 9T, Management's Annual Report on Internal Control over Financial Reporting, to conclude that Cyclacel Pharmaceuticals, Inc.'s internal control over financial reporting was not effective as of December 31, 2009. Accordingly, our present opinion on the effectiveness of Cyclacel Pharmaceuticals, Inc.'s internal control over financial reporting as of December 31, 2009, as expressed herein, is different from that expressed in our previous report.

A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the Company's annual or interim financial statements will not be prevented or detected on a timely basis. Management identified a material weakness related to its internal control over financial reporting, specifically related to the operational failure of the controls in place to ensure the correct computation of its net loss per share and presentation of preferred stock dividends in the statement of cash flows. The material weakness resulted in the restatement of Cyclacel Pharmaceuticals, Inc.'s financial statements including the net loss per share—basic and diluted and the statement of cash flows for each of the three years in the period ended December 31, 2009. We have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Cyclacel Pharmaceuticals, Inc. as of December 31, 2009 and 2008, and the related consolidated statements of operations, shareholders' equity, and cash flows for each of the three years in the period ended December 31, 2009 and the period from August 13, 1996 (inception) to December 31, 2009. This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audits of the consolidated financial statements and this report does not affect our

report dated March 29, 2010, except for Note 20 as to which the date is May 14, 2010, on those financial statements.

In our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, Cyclacel Pharmaceuticals, Inc. has not maintained effective internal control over financial reporting as of December 31, 2009, based on the COSO criteria.

/s/ Ernst & Young LLP

London, England

March 29, 2010, except for the effects of the material weakness described in the sixth paragraph above, as to which the date is May 14, 2010

(d) Remediation Activities

To remediate the material weakness in our internal control over financial reporting as described above, management is enhancing its controls over financial statement presentation and disclosures in this area, specifically by adding additional review procedures over the Company's computation of net loss per share and in the presentation and disclosure of preferred stock dividends in the statement of cash flows. We anticipate that the actions described above will remediate the December 31, 2009 material weakness. The material weakness will only be considered remediated when the revised internal controls are operational for a period of time and are tested and management has concluded that the controls are operating effectively.

(e) Changes in Internal Control over Financial Reporting

Except as described above, there have been no significant changes in our internal control over financial reporting during the year ended December 31, 2009 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART IV

Item 15. Exhibits and Financial Statement Schedules

(a) Documents filed as part of this report are as follows:

(1) Financial Statements and Report of Independent Registered Public Accounting Firm

(2) Financial Statement Schedules

None required.
