Infineon Technologies AG
(Exact name of Registrant as specified in its charter)

Federal Republic of Germany
(Jurisdiction of incorporation or organization)

**Am Campeon 1-12,
D-85579 Neubiberg
Federal Republic of Germany**
(Address of principal executive offices)

(Name, Telephone, E-mail and/or Facsimile number and Address of Company Contact Person)

Securities registered or to be registered pursuant to Section 12(b) of the Act:

Title of each class	Name of each exchange on which registered
American Depositary Shares, each representing one ordinary share, notional value 2.00 per share	New York Stock Exchange

Ordinary shares, notional value 2.00 per share*

New York Stock Exchange

* Listed, not for trading or quotation purposes, but only in connection with the registration of American Depositary Shares pursuant to the requirements of the Securities and Exchange Commission

Securities registered or to be registered pursuant to Section 12(g) of the Act: None

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act: None

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report. 749,728,635 ordinary shares, notional value 2.00 per share

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Note Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 from their obligations under those Sections.

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer

Accelerated filer

Non-accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP International Financial Reporting Standards as issued by the International Accounting Standards Board Other

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow.

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

(APPLICABLE ONLY TO ISSUERS INVOLVED IN BANKRUPTCY PROCEEDINGS DURING THE PAST FIVE YEARS)

Indicate by check mark whether the registrant has filed all documents and reports required to be filed by Sections 12, 13 or 15(d) of the Securities Exchange Act of 1934 subsequent to the distribution of securities under a plan confirmed by a court.

Yes No

PRESENTATION OF FINANCIAL AND OTHER INFORMATION

Our consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States (U.S. GAAP). Our consolidated financial statements are expressed in Euro. In this annual report, references to Euro or are to Euro and references to U.S. dollars or \$ are to United States dollars. For convenience, our annual report contains translations of Euro amounts into U.S. dollars at the rate of 1.00 = \$1.4081, the noon buying rate of the Federal Reserve Bank of New York for Euro on September 30, 2008. The noon buying rate for Euro on December 22, 2008 was 1.00 = \$1.3952. Our fiscal year ends on September 30 of each year. References to any fiscal year refer to the year ended September 30 of the calendar year specified. In this annual report, references to:

our company are to Infineon Technologies AG and its subsidiaries; and

we , us or Infineon are to Infineon Technologies AG and, unless the context otherwise requires, to its subsidiaries including Qimonda, and its predecessor, the former semiconductor group of Siemens AG; and

Qimonda are to Qimonda AG and its subsidiaries, and its predecessor, the former memory products segment of Infineon.

Infineon Logic are to the Company excluding Qimonda.

This annual report contains market data that has been prepared or reported by Gartner Inc. and its unit Dataquest, Inc. (together Gartner Dataquest), Frost & Sullivan, IC Insights, Inc. (IC Insights), iSuppli Corporation (iSuppli), IMS Research, Strategy Analytics, Inc. (Strategy Analytics), and World Semiconductor Trade Statistics (WSTS).

Amounts presented in tabular format may not add up due to rounding.

Special terms used in the semiconductor industry are defined in the glossary.

Forward-Looking Statements

This annual report contains forward-looking statements. Statements that are not historical facts, including statements about our beliefs and expectations, are forward-looking statements. These statements are based on current plans, estimates and projections. Forward-looking statements speak only as of the date they are made, and we undertake no obligation to update any of them in light of new information or future events. Forward-looking statements involve inherent risks and uncertainties. We caution you that a number of important factors could cause actual results or outcomes to differ materially from those expressed in any forward-looking statement. These factors include those identified under the heading Risk Factors and elsewhere in this annual report.

Use of Non-U.S. GAAP Financial Measures

This document contains non-U.S. GAAP financial measures. Non-U.S. GAAP financial measures are measures of our historical or future performance, financial position or cash flows that contain adjustments that exclude or include amounts that are included or excluded, as the case may be, from the most directly comparable measure calculated and presented in accordance with U.S. GAAP in our consolidated financial statements. For descriptions of these non-U.S. GAAP financial measures and the adjustments made to the most directly comparable U.S. GAAP financial measures, please refer to Operating and Financial Review .

Principal Business Address

Our principal business address is Am Campeon 1-12, D-85579 Neubiberg, Federal Republic of Germany.

Table of Contents**SELECTED CONSOLIDATED FINANCIAL DATA**

You should read the following selected consolidated financial data in conjunction with our consolidated financial statements, the related notes and Operating and Financial Review, all of which appear elsewhere in this annual report.

We have derived the selected consolidated statement of operations and cash flow data for the 2004 through 2008 fiscal years and the selected consolidated balance sheet data at September 30, 2004 through 2008 from our consolidated financial statements, which have been prepared in accordance with U.S. GAAP and audited by KPMG AG Wirtschaftsprüfungsgesellschaft (previously KPMG Deutsche Treuhand-Gesellschaft Aktiengesellschaft Wirtschaftsprüfungsgesellschaft), an independent registered public accounting firm.

Notes:

- (1) Columns may not add up due to rounding.
- (2) During the 2008 fiscal year we committed to a plan to dispose of Qimonda. Accordingly, the results of Qimonda are reported as discontinued operations in the Selected Consolidated Statement of Operations data for all periods presented, and the assets and liabilities of Qimonda have been reclassified as held for disposal in the Selected Consolidated Balance Sheet data for all periods presented.
- (3) Unaudited.
- (4)

Converted from Euro into U.S. dollars at an exchange rate of 1 = \$1.4081, which was the noon buying rate on September 30, 2008.

- (5) These charges relate to cost-reduction programs implemented to restructure our organization.

Table of Contents

OPERATING AND FINANCIAL REVIEW FOR THE 2008 FISCAL YEAR

This discussion and analysis of our consolidated financial condition and results of operations should be read in conjunction with our audited consolidated financial statements and other financial information included elsewhere in this annual report. Our audited consolidated financial statements have been prepared on the basis of a number of assumptions more fully explained in Note 1 (Description of Business and Basis of Presentation) and Note 2 (Summary of Significant Accounting Policies) to our audited consolidated financial statements appearing elsewhere in this annual report.

Overview of the 2008 Fiscal Year

In our 2008 fiscal year, which ended September 30, the global economy slowed substantially compared with our prior fiscal year. This slow-down was intensified by the deepening crisis in financial markets, by major corrections in housing markets in a number of major economies, and by surges in commodity prices. Global semiconductor market growth was in the low single-digits compared to market volume in the prior fiscal year.

The following were the key developments in our business during the 2008 fiscal year:

Financial Results

Despite unfavorable currency exchange rates and pricing pressure, we were able to increase overall net sales in our logic segments during the 2008 fiscal year. Net sales in our Automotive, Industrial & Multimarket segment declined slightly. This resulted mainly from the deconsolidation of our high power bipolar business in the first quarter of the 2008 fiscal year as a consequence of the formation of a joint venture with Siemens AG (Siemens) and the sale of our hard disk drive (HDD) business to LSI Corporation (LSI). Excluding these effects, and despite significant pricing pressure, this segment experienced slightly increased net sales in the 2008 fiscal year. Furthermore, during the 2008 fiscal year, net sales of our Communication Solutions segment increased strongly, driven mainly by the wireless business. Overall, net sales of our combined logic segments increased by 6 percent, from 4,074 million in the 2007 fiscal year to 4,321 million in the 2008 fiscal year.

During the quarter ended March 31, 2008, we committed to a plan to dispose of Qimonda. The results of Qimonda are reported as discontinued operations in our company's consolidated statements of operations for all periods presented, and the assets and liabilities of Qimonda have been reclassified as held for disposal in the consolidated balance sheets for all periods presented. Following this reclassification, Qimonda has been remeasured to its current fair value less costs to sell for each period thereafter, resulting in write-downs of 1,303 million, which have been recorded in Loss from discontinued operations, net of tax. With this reclassification, the individual line items in Infineon's consolidated statements of operations, including Net sales, reflect Infineon's continuing operations without Qimonda for all periods presented. All results relating to Qimonda are reported in the line item Loss from discontinued operations, net of tax for all periods presented. In addition, earnings per share and the statements of cash flows differentiate between continuing and discontinued operations for all periods presented.

Earnings before interest and taxes (EBIT) in our Automotive, Industrial & Multimarket segment improved primarily as a result of the sale of 40 percent of our high power bipolar business to, and the formation of a joint venture with Siemens, as well as the disposal of the HDD business. EBIT of our Automotive, Industrial & Multimarket segment was negatively impacted by production equipment impairment charges. Excluding these effects, EBIT of this segment remained stable in the 2008 fiscal year. In our Communication Solutions

segment, EBIT continued to improve mainly driven by the sales increase. EBIT for our combined logic segments in the 2008 fiscal year was negative 48 million compared to positive 37 million in the 2007 fiscal year, and was negatively impacted by restructuring and impairment charges in particular, which were only partly offset by gains from the sale of businesses.

Table of Contents

The extreme pricing pressure experienced in the memory products industry during the last year resulted in Qimonda incurring significant losses, which are reflected in Loss from discontinued operations, net of tax in our consolidated statements of operations. These losses and the write-downs recorded during the 2008 fiscal year to re-measure Qimonda to its current fair value less costs to sell had a material negative impact on our results of operations. Our net loss increased from 368 million in the 2007 fiscal year to 3,122 million in the 2008 fiscal year. On December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. The package includes a 150 million loan from the German Free State of Saxony, a 100 million loan from a state bank in Portugal and a 75 million loan from us. In addition to this financing package, Qimonda has announced that it expects to receive guarantees totaling 280 million from the Federal Government of Germany and the Free State of Saxony. Based on such guarantees, Qimonda has announced that it is already in advanced negotiations regarding the financing of 150 million. The availability of the total financing package is contingent upon successful completion of the relevant state, federal and European Commission approval procedures as well as final agreement on the detailed terms and conditions of the transaction. See Recent Developments Related to Qimonda .

Our cash flow provided by operating activities from continuing operations increased from 227 million in the 2007 fiscal year to 535 million in our 2008 fiscal year. Cash flow used in operating activities from discontinued operations was 659 million in the 2008 fiscal year, compared to an inflow of 980 million in the prior year. This decrease of 1,639 million primarily reflects the loss incurred by Qimonda in the 2008 fiscal year. The sum of our cash flows from operating activities (continuing and discontinued operations combined) decreased from 1,207 million provided in the 2007 fiscal year to 124 million used during the 2008 fiscal year.

Corporate Activities:

To address rising risks in the current market environment, adverse currency trends and below benchmark margins, we implemented our cost-reduction program IFX10+ in the third quarter of the 2008 fiscal year. Subsequent to the end of the 2008 fiscal year, and in light of continuing adverse developments in general economic conditions and in our industry, we identified significant further costs savings in addition to those originally anticipated. We expect that this program will result in significant annualized cost savings in the next fiscal year, primarily through measures in the following areas:

Product portfolio management to eliminate unprofitable or insufficiently profitable product families and to increase efficiency in research and development (R&D);

Reduction of manufacturing costs and optimization of the value chain;

Improved efficiency of processes and tasks in the fields of general and administrative expenses, R&D and marketing and sales;

Re-organization of our structure along our target markets. Starting October 1, 2008, our company is organized in five segments: Automotive, Industrial & Multimarket, Chip Card & Security, Wireless Solutions and Wireline Communications; and

Reductions in workforce.

During the 2008 fiscal year, we incurred restructuring charges of 181 million, which are primarily related to the IFX10+ cost-reduction program.

During the 2008 fiscal year, we completed the following two business acquisitions:

In October 2007, we acquired the mobility products business of LSI to further strengthen our activities in the field of communications. The acquired business develops semiconductors and software for mobile phone platform solutions.

In April 2008, we acquired Primarion, Inc., Torrance, California (Primarion) in order to further strengthen our activities in the field of power management applications. Primarion is among the

Table of Contents

leaders in designing, manufacturing and marketing digital power ICs for computing, graphics and communication applications.

During the 2008 fiscal year we completed the following three business disposals:

In November 2007, we entered into a joint venture agreement with Siemens, whereby we contributed all assets and liabilities of our high power bipolar business to a newly formed legal entity called Infineon Technologies Bipolar GmbH & Co. KG (Bipolar). Siemens subsequently acquired a 40 percent interest in Bipolar. We realized a gain before tax of 27 million from this transaction.

In April 2008, LSI acquired our HDD business, which designs, manufactures and markets semiconductors for HDD devices. We transferred our entire HDD activities, including customer relationships and know-how, to LSI, and we granted LSI a license for intellectual property (IP). We realized a gain before tax of 41 million from this sale.

In August 2008, we sold our bulk acoustic wave filter business (BAW) to Avago Technologies Ltd (Avago) and entered into a supply agreement through December 2009 with Avago. The BAW business designs, manufactures and markets cellular duplexers for N-CDMA and W-CDMA applications and filters for GPS. We realized a gain before tax of 11 million and recorded a deferred gain of 6 million which will be realized over the term of the supply agreement.

During the third quarter of the 2008 fiscal year, we repurchased a notional amount of 100 million of our convertible subordinated notes due 2010. The repurchase was made out of available cash. These notes were subsequently cancelled.

In August 2007, we and International Business Machines Corporation, New York, USA (IBM) signed an agreement in principle to divest our respective shares in ALTIS Semiconductor S.N.C., Essonnes, France (ALTIS) via a sale to Advanced Electronic Systems AG (AES). As of September 30, 2008, negotiations with AES have not progressed as previously anticipated and could not be completed. Despite the fact that negotiations are ongoing with additional parties, the outcome of these negotiations is uncertain. As a result, we reclassified related assets and liabilities previously classified as held for sale into held and used in the consolidated balance sheet as of September 30, 2008. The reclassification of the disposal group into held and used required an adjustment of 59 million to the carrying amount of the disposal group, which was recorded in income from continuing operations. The disposal group was measured at the lower of its carrying amount before being classified as held for sale, adjusted for any depreciation and amortization expense that would have been recognized had the disposal group been continuously classified as held and used, or the fair value at the date of the reclassification.

As part of our ongoing efforts to improve our production processes, expand our production capabilities, and improve our cost position, we:

continued to invest in our front-end power fabrication facility located in Kulim Hi-Tech Park, Malaysia. The capacity upon completion will be approximately 100,000 wafer starts per month using 200-millimeter wafers. At the end of the 2008 fiscal year aggregate capital expenditures to date were approximately 450 million and production was running at 40,000 wafer starts per month. The facility produces power and logic chips used in industrial and automotive power applications;

are currently qualifying products in 65-nanometer technology at several manufacturing partners and have begun to develop products based on 40-nanometer technology, which we currently plan to have

manufactured by one of our manufacturing partners; and

are proceeding with our development agreements with IBM and its development and manufacturing partners to develop 32-nanometer technology. This agreement builds on the success of earlier joint development and manufacturing agreements.

Table of Contents

Product and Technology Developments

We continued to invest heavily in research and development and achieved a number of significant milestones and product developments during the year:

Energy Efficiency

the introduction of three new families of OptiMOS[™] 3 N-channel MOSFETs with breakdown voltages of 40V, 60V and 80V, offering industry-leading performance in such key power conversion matrices as on-state resistance, which enables reductions of power losses of as much as 30 percent in power conversion and management applications, including switched mode power supplies, DC/DC converters and DC motor drives in computers, home appliances, industrial automation systems, telecommunications equipment and such consumer devices as power tools, electric lawnmowers and fans;

the introduction of the world's first 900V high voltage power MOSFETs using a charge compensation principle for switched mode power supplies (for example, PC silverboxes and server power supplies), industry (for example, building and streetlighting) and renewable energy applications (for example, photovoltaic converters);

the introduction of our new MIPAQ[™] family of IGBT modules that offers a very high level of integration enabling highly efficient power inverter designs to be used in uninterruptible power supplies, industrial drives such as compressors, pumps and fans, solar power plants, and air conditioning systems;

Security

our company's appointment to provide security microcontrollers for the largest contactless microcontroller transportation card project in China in 2008, known as the *Shenzhen Tong* microcontroller cards, which are multi-application cards that can be used as both a ticket in public transportation and for payment in stores;

the introduction of a 32-bit high-security flash microcontroller designed to bring a significant layer of security and convenience to mobile applications based on NFC (Near Field Communications), which enables new services on mobile devices, such as ticketing, secure banking and loyalty programs, by holding a NFC-enabled mobile phone in front of a contactless terminal;

the introduction of the new SLM 76 family of security microcontrollers targeting the growing market of machine-to-machine communication (M2M) for various applications, such as utility monitoring, remote alarm systems, car telematics, fleet management and vending machines (stock level checks);

Communications

the start of volume production of our HSDPA mobile phone platform XMM[™]6080 to Samsung Electronics Co. Ltd., Seoul, Korea (Samsung) and another customer. We also introduced a new generation 3G platform family. The new XMM61xx platform family addresses all major 3G market segments from cost efficient HSDPA to high-end HSUPA phones;

the sampling of our 65-nanometer GSM/GPRS single-chip solution X-GOLD[™]113 and EDGE single-chip solution X-GOLD[™]213. Both chips integrate the baseband, RF transceiver, power management unit, and FM radio in a single die; and

the introduction of XWAY™ ARX168, a single-chip ADSL2+ device with industry-first integrated Gigabit Ethernet support and advanced features to support Internet Protocol Television (IPTV) and wireless transmission rates of over 150 Mbps.

Our Business

We design, develop, manufacture and market a broad range of semiconductors and complete system solutions used in a wide variety of microelectronic applications, including computer systems,

Table of Contents

telecommunications systems, consumer goods, automotive products, industrial automation and control systems, and chip card applications. Our products include standard commodity components, full-custom devices, semi-custom devices, and application-specific components for memory, analog, digital, and mixed-signal applications. We have operations, investments, and customers located mainly in Europe, Asia and North America.

During the 2008 fiscal year, our continuing core business was organized in two segments, our Automotive, Industrial & Multimarket segment and our Communication Solutions segment.

Our Automotive, Industrial & Multimarket segment designs, develops, manufactures and markets semiconductors and complete system solutions primarily for use in automotive, industrial and security applications, and applications with customer-specific product requirements.

Our Communication Solutions segment designs, develops, manufactures and markets a wide range of ICs, other semiconductors and complete system solutions for wireline and wireless communication applications.

Effective October 1, 2008, to better align our business with our target markets, we reorganized our core business into five operating segments: Automotive, Industrial & Multimarket, Chip Card & Security, Wireless Solutions and Wireline Communications:

The Automotive segment designs, develops, manufactures and markets semiconductors for use in automotive applications. Together with its product portfolio, Infineon offers corresponding system know-how and support to its customers.

The Industrial & Multimarket segment designs, develops, manufactures and markets semiconductors and complete system solutions primarily for use in industrial applications and in applications with customer-specific product requirements.

The Chip Card & Security segment designs, develops, manufactures and markets semiconductors and complete system solutions primarily for use in chip card and security applications.

The Wireless Solutions segment designs, develops, manufactures and markets a wide range of ICs, other semiconductors and complete system solutions for wireless communication applications.

The Wireline Communications segment designs, develops, manufactures and markets a wide range of ICs, other semiconductors and complete system solutions focused on wireline access applications.

We have two additional segments for reporting purposes, our Other Operating Segments, which includes remaining activities for certain product lines that have been disposed of, and other business activities, and our Corporate and Eliminations segment, which contains items not allocated to our operating segments, such as certain corporate headquarters costs, strategic investments, unabsorbed excess capacity and restructuring costs.

In addition, we currently hold a 77.5 percent interest in Qimonda. Qimonda designs memory technologies and develops, manufactures, and markets a large variety of memory products on a module, component and chip level. During the second quarter of the 2008 fiscal year, we committed to a plan to dispose of Qimonda and classified the assets and liabilities of Qimonda as held for disposal for all periods presented.

On December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. The package includes a 150 million loan from the German Free State of Saxony, a 100 million loan from a state bank in Portugal and a 75 million loan from us. In addition to this financing package, Qimonda has

announced that it expects to receive guarantees totaling 280 million from the Federal Government of Germany and the Free State of Saxony. Based on such guarantees, Qimonda has announced that it is already in advanced negotiations regarding the financing of 150 million. The availability of the total financing package is contingent upon successful completion of the relevant state, federal and European Commission approval procedures as well as final agreement on the detailed terms and conditions of the transaction. See Recent Developments Related to Qimonda .

Table of Contents

The Semiconductor Industry and Factors that Impact Our Business

Our business and the semiconductor industry generally are highly cyclical and characterized by constant and rapid technological change, rapid product obsolescence and price erosion, evolving standards, short product life-cycles and wide fluctuations in product supply and demand. Although these factors affect all segments of our business, they are especially pronounced for Qimonda, are increasingly true for our Communication Solutions segment, and have historically had the least impact on our Automotive, Industrial & Multimarket segment.

Cyclical

The industry's cyclical results from a complex set of factors, including, in particular, fluctuations in demand for the end products that use semiconductors and fluctuations in the manufacturing capacity available to produce semiconductors. This cyclical is especially pronounced in the memory portion of the industry. Semiconductor manufacturing facilities (so-called fabrication facilities, or "fabs") can take several years to plan, construct, and begin operations. Semiconductor manufacturers have in the past made capital investments in plant and equipment during periods of favorable market conditions, in response to anticipated demand growth for semiconductors. If more than one of these newly built fabs comes on-line at about the same time, the supply of chips to the market can be vastly increased. Without sustained growth in demand, this cycle has typically led to manufacturing over-capacity and oversupply of products, which in turn has led to sharp drops in semiconductor prices. When prices drop, manufacturers have in the past cut back on investing in new fabs. As demand for chips grows over time, without additional fabs coming on-line, prices tend to rise, leading to a new cycle of investment. The semiconductor industry has generally been slow to react to declines in demand, due to its capital-intensive nature and the need to make commitments for equipment purchases well in advance of planned expansion.

We attempt to mitigate the impact of cyclical by investing in manufacturing capacities throughout the cycle and entering into alliances and foundry manufacturing arrangements that provide flexibility in responding to changes in the cycle.

Substantial Capital and R&D Expenditures

Semiconductor manufacturing is very capital-intensive. The manufacturing capacities that are essential to maintain a competitive cost position require large capital investments. The top 10 capital spenders in the industry, according to IC Insights, account for approximately 60 percent of the industry's projected 2008 capital spending budgets. Manufacturing processes and product designs are based on leading-edge technologies that require considerable research and development expenditures. A high percentage of the cost of operating a fab is fixed; therefore, increases or decreases in capacity utilization can have a significant effect on profitability.

Because pricing, for DRAM products in particular, is market-driven and largely beyond our and Qimonda's control, a key factor for Qimonda in achieving and maintaining profitability is to continually lower its per-unit costs by reducing total costs and by increasing unit production output through productivity improvements.

To reduce total costs, we and Qimonda each intend to share the costs of our respective research and development and manufacturing facilities with third parties, either by establishing alliances or through the use of foundry facilities for manufacturing. We believe that cooperation in alliances for R&D, as well as manufacturing and foundry partnerships, provide us with a number of important benefits, including the sharing of risks and costs, reductions in our own capital requirements, acquisitions of technical know-how, and access to additional production capacities. In our logic business, our principal alliances are with IBM, Chartered Semiconductor Manufacturing Ltd., Singapore (Chartered

Semiconductor) and Samsung for CMOS development and manufacturing at 65-nanometer, 45-nanometer, and 32-nanometer process technologies. Further, we have established foundry relationships with United Microelectronics Corporation, Taipei, Taiwan (UMC) for 130-nanometer and 90-nanometer manufacturing. In the backend field, in August 2008, we, STMicroelectronics NV and STATS ChipPAC Ltd. announced an agreement to jointly develop the next-generation of embedded Wafer-Level Ball Grid Array (eWLB) technology, based on our

Table of Contents

first-generation technology, for use in manufacturing future-generation semiconductor packages. This will build on our existing eWLB packaging technology, which we have licensed to our development partners. The new R&D effort, for which the resulting IP will be jointly owned by the three companies, will focus on using both sides of a reconstituted wafer to provide solutions for semiconductor devices with a higher integration level and a greater number of contact elements. In addition, Qimonda has established foundry relationships with partners in Asia, including Winbond Electronics Corp., Taichung, Taiwan (Winbond), to increase its manufacturing capacities, and therefore its potential revenues, without investing in additional manufacturing assets.

We expect to continue to increase unit production output through improvements in manufacturing, which is achieved by producing chips with smaller structure sizes (more bits per chip) and by producing more chips per silicon wafer (by using larger wafers). Currently, a substantial portion of our logic capacity is based on 130-nanometer structure sizes. Our 130-nanometer process technology, with up to eight layers of copper metallization, is in full production at several manufacturing sites, including our Dresden facility. Additional 130-nanometer process options have been developed to fulfill the needs of specialty applications. Our 90-nanometer logic technology is in production. We are currently qualifying 65-nanometer technology at several manufacturing partners and have begun to develop products based on 40-nanometer technology which are currently planned to be manufactured initially at one of our manufacturing partners.

About half of our fab capacity for logic products is used for the manufacture of power semiconductors used in automotive and industrial applications. We have manufacturing sites in Regensburg, Germany, in Villach, Austria and in Kulim, Malaysia. We continue to focus on innovation for power semiconductors, introducing power copper metallization and special processes to fabricate ever thinner wafers to optimize electrical resistance.

Technological Development and Competition

Sales prices per unit are volatile and generally decline over time due to technological developments and competitive pressure. Logic products generally have a certain degree of application specification. Although generally less volatile than those for commodity memory products, unit sales prices for logic products typically decline over time as technological developments occur. By contrast, DRAM products are to a large extent commodities. Since most specifications are standardized, customers can switch between suppliers on short notice. This leads to strong competition within the market, especially for standard DRAM products for PC applications, and causes manufacturers to pass cost savings on to their customers in an effort to gain market share.

We aim to offset the effects of declining unit sales prices on total net sales by optimizing product mix, by increasing unit sales volume and by continually reducing per-unit production costs. The growth in volume depends in part on productivity improvements in manufacturing. By moving to ever-smaller structure sizes, the number of functional elements has historically doubled approximately every two years. In the area of DRAM products, this trend, often referred to as Moore's Law, has led to an average growth rate of bit-volumes of between 40 percent and 45 percent per year and, assuming constant costs per square inch of silicon, to an approximately 30 percent cost reduction per bit per year.

Seasonality

Our sales are affected by seasonal and cyclical influences, with sales historically strongest in our fourth fiscal quarter. These short cycles are influenced by longer cycles that are a response to innovative technical solutions from our customers that incorporate our products. The short-term and mid-term cyclicity of our sales reflects the supply and demand fluctuations for the products that contain our semiconductors. If anticipated sales or shipments do not occur when expected, expenses and inventory levels in a given quarter can be disproportionately high, and our results of operations for that quarter, and potentially for future quarters, may be adversely affected.

Table of Contents

Product Development Cycles

For logic products, the cycle for test, evaluation and adoption of our products by customers before the start of volume production can range from several months to more than one year. Due to this lengthy cycle, we may experience significant delays from the time we incur expenses for R&D, marketing efforts, and investments in inventory, to the time we generate corresponding revenue, if any. Development cycles affect memory products to a lesser extent due to the higher degree of standardization for most memory products.

Acquisition and Divestiture Strategy

A key element of our core business strategy is to seek to reduce the time required to develop new technologies and products and bring them to market, and to optimize our existing product offerings, market coverage, engineering workforce, and technological capabilities. We plan to continue to evaluate strategic opportunities as they arise, including business combination transactions, strategic relationships, capital investments, and the purchase or sale of assets or businesses.

Intellectual Property

Due to the high-technology nature of the semiconductor industry, IP, meaning intangible assets relating to proprietary technology, is of significant importance. We do not record assets on our balance sheet for self-developed IP. Only IP licensed from others or acquired through business combinations is reflected on our balance sheet, and reduced through amortization over its expected useful life. The value of such acquired IP is often complex and difficult to estimate. We also derive modest revenues from the licensing of our IP, generally pursuant to cross licensing arrangements.

Challenges that Lie Ahead

Going forward, our success will remain highly dependent on our ability to stay at the leading edge of technology development, and to continue to optimize our product portfolio. We must achieve both objectives to ensure that we have the flexibility to react to fluctuations in market demand for different types of semiconductor products. We believe that the ability to offer and the flexibility to manufacture a broad portfolio of products will be increasingly important to our long-term success in many markets within the semiconductor industry. Establishing and maintaining advantageous technology, development and manufacturing alliances, including the use of third-party foundries, and continuing our efforts to broaden our product portfolio will make it easier for us to respond to changes in market conditions and to improve our financial performance.

Semiconductor Market Conditions in the 2008 Fiscal Year

According to WSTS, the global semiconductor market grew by 4 percent through the first nine months of the 2008 calendar year compared to the same period last year, following a growth rate of 3.2 percent in the 2007 calendar year. In November 2008, WSTS predicted a growth rate of 2 percent for the full 2008 calendar year. Sales in North America are expected to decrease by 8 percent and in Europe by 1 percent in the 2008 calendar year, according to WSTS. The semiconductor market in Asia/Pacific (excluding Japan) is expected to increase by 8 percent; the Japanese market is expected to grow by 1 percent. Sales of non-memory products (logic chips, analog, and discretetes), which accounted for 81 percent of the entire market in the first nine months of the 2008 calendar year, are predicted to grow by 8 percent compared with the 2007 calendar year. Sales of memory products are predicted to decline by 15 percent compared with the 2007 calendar year.

Table of Contents**Results of Operations*****Results of Operations as a Percentage of Net Sales***

The following table presents the various line items in our consolidated statements of operations expressed as percentages of net sales.

	For the years ended September 30,⁽¹⁾		
	2006	2007	2008
Net sales	100.0%	100.0%	100.0%
Cost of goods sold	(68.2)	(66.3)	(65.3)
Gross profit	31.8	33.7	34.7
Research and development expenses	(19.8)	(18.9)	(17.5)
Selling, general and administrative expenses	(12.6)	(12.3)	(13.2)
Restructuring charges	(0.6)	(1.1)	(4.2)

Reorganization

Our organizational structure for the period through March 31, 2008 became effective on May 1, 2006, following the legal separation of our memory products business into the stand-alone legal company Qimonda. Effective March 31, 2008, the results of Qimonda are reported as discontinued operations in our consolidated statements of operations for all periods presented, and the assets and liabilities of Qimonda have been classified as held for disposal in the consolidated balance sheets for all periods presented.

As a result, our company operated primarily in two operating segments during the 2008 fiscal year: Automotive, Industrial & Multimarket, and Communication Solutions. Further, certain of our remaining activities for product lines sold, for which there are no continuing contractual commitments subsequent to the divestiture date, and new business activities also meet the SFAS No. 131 *Disclosure about Segments of an Enterprise and Related Information* definition of an operating segment, but do not meet the requirements of a reportable segment as specified in SFAS No. 131. Accordingly, these segments are combined and disclosed in the Other Operating Segments category pursuant to SFAS No. 131.

Following the completion of the Qimonda carve-out, certain corporate overhead expenses are no longer apportioned to Qimonda and are instead allocated to our logic segments. In addition, Other Operating Segments includes net sales and earnings that Infineon Logic's 200-millimeter production facility in Dresden recorded from the sale of wafers to Qimonda under a foundry agreement, which was

Table of Contents

cancelled during the 2008 fiscal year. The Corporate and Eliminations segment reflects the elimination of these net sales and earnings. Also, effective October 1, 2007, we record gains and losses from sales of investments in marketable debt and equity securities in the Corporate and Eliminations segment. The segments' results of operations for prior periods have been reclassified to be consistent with the revised reporting structure and presentation, as well as to facilitate analysis of current and future operating segment information.

Effective October 1, 2008, to better align our business with our target markets we reorganized our core business into five operating segments: Automotive, Industrial & Multimarket, Chip Card & Security, Wireless Solutions and Wireline Communications. We will report our segment results under this new structure beginning with the first quarter of the 2009 fiscal year.

Net Sales

We generate our revenues primarily from the sale of our semiconductor products and systems solutions. Our semiconductor products include a wide array of chips and components used in electronic applications ranging from wireless and wireline communication systems, to chip cards, to automotive electronics, and industrial applications.

We generated the majority of our product sales in the 2008 fiscal year through our direct sales force, with approximately 22 percent of net sales from our logic segments derived from sales made through distributors.

We derive our license revenue from royalties and license fees earned on technology that we own and license to third parties. This enables us to recover a portion of our research and development expenses, and also often allows us to gain access to manufacturing capacity at foundries through joint licensing and capacity reservation arrangements.

Our net sales fluctuate in response to a combination of factors, including the following:

The market prices for our products, including fluctuations in exchange rates that affect our prices;

Our overall product mix and sales volumes;

The stage of our products in their respective life cycles;

The effects of competition and competitive pricing strategies;

Governmental regulations influencing our markets (e.g., energy efficiency regulations); and

The global and regional economic cycles.

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Net sales	4,114	4,074	4,321
Changes year-on-year		(1)%	6 %
Of which:			
License income	21	20	54
Percentage of net sales	1%	0 %	1 %
Effect of foreign exchange over prior year	142	(174)	(271)

Percentage of net sales	3%	(4)%	(6)%
Impact of acquisitions over prior year	40	16	133
Percentage of net sales	1%	0 %	3 %

In the 2008 fiscal year, net sales increased primarily as a result of the revenue increase in the wireless business of the Communication Solutions segment, while net sales in our Automotive, Industrial & Multimarket segment slightly decreased. The increase in license income was due to higher license income within our Communication Solutions segment. The strength of the Euro (primarily against the U.S. dollar) during the 2007 and 2008 fiscal years negatively impacted net sales, whereas net sales in the 2006 fiscal year were positively impacted by the effect of foreign exchange rates. The effect of foreign exchange over the prior year is calculated as the estimated change in current year sales if the average

Table of Contents

exchange rate for the preceding year were applied as a constant rate in the current year. The increase in net sales resulting from business acquisitions since the beginning of the prior year reflects primarily the inclusion of a full-year consolidation of sales in the year after the initial acquisition. Net sales for the 2008 fiscal year include the effect of the mobility products business acquired from LSI starting October 25, 2007, and Primarion starting April 28, 2008. Net sales for the 2007 fiscal year include the effect of the DSL Customer Premises Equipment (CPE) business acquired from Texas Instruments Inc. (TI) starting August 1, 2007.

Net Sales by Segment

	For the years ended September 30,					
	2006	2007		2008		
	(in millions, except percentages)					
Automotive, Industrial & Multimarket	2,839	69 %	3,017	74 %	2,963	69 %
Communication Solutions ⁽¹⁾	1,205	29	1,051	26	1,360	31
Other Operating Segments ⁽²⁾	310	8	219	5	100	2
Corporate and Eliminations ⁽³⁾	(240)	(6)	(213)	(5)	(102)	(2)
Total	4,114	100 %	4,074	100 %	4,321	100 %

(1) Includes sales of 0, 30 million and 10 million for fiscal years ended September 30, 2006, 2007, and 2008, respectively, from sales of wireless communication applications to Qimonda.

(2) Includes sales of 256 million, 189 million and 79 million for fiscal years ended September 30, 2006, 2007 and 2008, respectively, from sales of wafers from Infineon Logic's 200-millimeter facility in Dresden to Qimonda under a foundry agreement.

(3) Includes the elimination of sales of 256 million, 219 million and 89 million for fiscal years ended September 30, 2006, 2007 and 2008, respectively, since these sales are not expected to be part of the Qimonda disposal plan.

Automotive, Industrial & Multimarket Despite continued segment-wide pricing pressure, we were able to increase net sales in the 2007 fiscal year. The sales growth was mainly driven by continuing strong demand for high power products in industrial applications, an increase of sales for energy efficient devices in industrial and multimarket applications, and increasing demand for government ID applications. In the 2008 fiscal year, net sales of the segment slightly decreased due to the sale of an interest in the bipolar business and formation of a joint venture which is being consolidated under the equity method of accounting effective October 1, 2007, and the sale of the HDD business to LSI in the third quarter of the 2008 fiscal year. Net sales of the remaining businesses increased as higher sales volumes more than offset the continued pricing pressures caused by technological developments and competition. Growth in net sales was driven mainly by continued strong demand for industrial high power applications, an increase in sales of multimarket applications, and a continued growing demand for government ID applications.

Communication Solutions In the 2007 fiscal year, net sales in the Communication Solutions segment declined primarily due to a continued decrease in net sales in the wireless business mainly driven by the insolvency of BenQ's German subsidiary as well as ongoing pricing pressure that could not be fully offset by increased shipments of complete mobile phone platform solutions to leading customers such as LG, Panasonic, and ZTE. In addition, net sales in the wireline business declined mainly due to lower revenues for digital cordless

products and the phase-out of our fiber optics business during the 2006 fiscal year. Net sales in the 2008 fiscal year increased strongly, primarily driven by the wireless business, resulting from a strong increase in mobile phone platform shipments and the consolidation of the mobility products business acquired from LSI. Net sales in the wireline business increased slightly as growth in broadband solutions mainly driven by the consolidation of the CPE business acquired from TI was partially offset by declining legacy revenues and negative currency effects.

Other Operating Segments Net sales in the 2006, 2007 and 2008 fiscal years comprised mainly inter-segment sales of wafers from Infineon Logic's 200-millimeter facility in Dresden to Qimonda under a foundry agreement which are eliminated in the Corporate and Eliminations segment. Effective November 30, 2007, as part of its measure aimed at further focusing its production on 300-millimeter capacities, Qimonda canceled the foundry agreement with Infineon Logic resulting in

Table of Contents

a significant decline in net sales during the 2008 fiscal year. The last wafers were delivered to Qimonda in May 2008.

Net Sales by Region and Customer

	2006	For the years ended September 30,				
		2007		2008		
		(in millions, except percentages)				
Germany	1,010	25 %	907	22 %	924	21 %
Other Europe	933	23 %	888	22 %	818	19 %
North America	535	13 %	564	14 %	503	12 %
Asia/Pacific	1,324	32 %	1,450	36 %	1,800	42 %
Japan	209	5 %	213	5 %	198	4 %
Other	103	2 %	52	1 %	78	2 %
Total	4,114	100 %	4,074	100 %	4,321	100 %

Sales decreased in Germany during our 2007 fiscal year primarily due to the insolvency of BenQ's German subsidiary, while sales increased in the Asia/Pacific region driven by higher sales volumes, particularly in the Automotive, Industrial & Multimarket and Communication Solutions segments. The absolute and relative increase in the share of net sales in Asia/Pacific in the 2008 fiscal year was mainly due to the acquisition of the mobility products business from LSI and higher shipments of mobile phone platforms solutions to customers in Asia/Pacific in our Communication Solutions segment.

The net sales in our Automotive, Industrial & Multimarket segment increased in Germany and Asia/Pacific, whereas sales decreased in Other Europe, North America and Japan. The number of customers in this segment grew by more than 10 percent in the 2008 fiscal year. The top 20 customers in this segment accounted for approximately 62 percent of the segment's sales in the 2008 fiscal year.

In the Communication Solutions segment, we have experienced a further shift of net sales from Europe and North America to the Asia/Pacific region in the 2008 fiscal year. Our top 20 customers in this segment accounted for over 70 percent of its net sales in the 2008 fiscal year.

Cost of Goods Sold and Gross Margin

Our cost of goods sold consists principally of:

Direct materials, which consist principally of raw wafer costs;

Labor costs;

Overhead, including maintenance of production equipment, indirect materials, utilities and royalties;

Depreciation and amortization;

Subcontracted expenses for assembly and test services;

Production support, including facilities, utilities, quality control, automated systems and management functions; and

Foundry production costs.

In addition to factors that affect our revenue, our gross margin is impacted by:

Factory utilization rates and related idle capacity costs;

Amortization of purchased intangible assets;

Product warranty costs;

Provisions for excess or obsolete inventories; and

Government grants, which are recognized over the remaining useful life of the related manufacturing assets.

Table of Contents

We include in cost of goods sold the cost of inventory purchased from our joint ventures and other associated and related companies. Our purchases from these associated and related companies amounted to 200 million, 47 million, and 148 million in the 2006, 2007 and 2008 fiscal years respectively.

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Cost of goods sold	2,805	2,702	2,823
Changes year-on-year		(4)%	4 %
Percentage of net sales	68 %	66 %	65 %
Gross margin	32 %	34 %	35 %

Our gross margin in the 2007 fiscal year increased slightly from the prior year. During the 2008 fiscal year our gross margin further increased primarily as a result of productivity measures.

Automotive, Industrial & Multimarket The gross margin in the 2007 fiscal year remained unchanged from the prior year, as pricing pressure and certain corporate overhead expenses that resulted from the Qimonda carve out were offset by increases in productivity. In the 2008 fiscal year, we were able to slightly increase gross margin by means of measures to increase productivity despite an increase in idle capacity cost.

Communication Solutions In the 2006 fiscal year, gross margin was positively impacted by lower idle capacity costs and the successful implementation of measures to increase productivity, which more than offset the inventory write-downs resulting from the insolvency of BenQ's German subsidiary. In the 2007 and 2008 fiscal years, the gross margin of this segment remained stable.

Research and Development Expenses

Research and development expenses consist primarily of salaries and benefits for research and development personnel, material costs, depreciation and maintenance of equipment used in our research and development efforts, and contracted technology development costs. R&D expenses also include our joint technology development arrangements with partners such as IBM.

We continue to focus our investments on the development of leading-edge manufacturing technologies and products with high potential for growth and profitability.

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Research and development expenses	816	768	755
Changes year-on-year		(6) %	(2) %
Percentage of net sales	20 %	19 %	17 %
Government subsidies	49	91	62
Percentage of net sales	1 %	2 %	1 %

Some of our R&D projects qualify for subsidies from local and regional governments where we do business. If the criteria to receive a grant are met, the subsidies received reduce R&D expenses over the project term as expenses are incurred.

Automotive, Industrial & Multimarket In the 2007 fiscal year, R&D expenses remained stable as a percentage of net sales and slightly increased in absolute terms mainly driven by automotive and industrial applications. In the 2008 fiscal year, R&D expenses remained unchanged, both in terms of absolute figures and as a percentage of sales.

Communication Solutions In the 2007 fiscal year, R&D expenses continued to decline in absolute terms and remained stable as a percentage of net sales, reflecting the implementation of cost reduction measures in response to the insolvency of BenQ's German subsidiary. In the 2008 fiscal year, R&D expenses remained stable in absolute terms despite the consolidation effect of the acquired activities for DSL customer premises equipment and mobile phone ICs, as efficiency gains

Table of Contents

and cost reduction measures initiated during the 2007 fiscal year were taking effect for a full fiscal year. As a percentage of sales, R&D expenses in the Communication Solutions segment declined sharply, mainly driven by the revenue increase.

Selling, General and Administrative (SG&A) Expenses

Selling expenses consist primarily of salaries and benefits for personnel engaged in sales and marketing activities, costs of customer samples, other marketing incentives, and related marketing expenses.

General and administrative expenses consist primarily of salaries and benefits for administrative personnel, non-manufacturing related overhead costs, consultancy, legal and other fees for professional services, recruitment and training expenses.

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Selling, general and administrative expenses	520	500	569
Changes year-on-year		(4)%	14 %
Percentage of net sales	13 %	12 %	13 %

In the 2007 fiscal year, selling, general and administrative expenses decreased in absolute terms as a result of cost saving measures and the non-recurrence of the unusual charges from the 2006 fiscal year. As a percentage of net sales, selling, general and administrative expenses remained broadly unchanged in the 2007 and 2008 fiscal years. The year-on-year increase in absolute terms in the 2008 fiscal year primarily reflects increased selling expenses following the acquisitions of the mobility product business from LSI and the CPE business from TI.

Other Items Affecting Earnings

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Restructuring charges	23	45	181
Percentage of net sales	1 %	1 %	4 %
Other operating expense (income), net	36	(20)	43
Percentage of net sales	(1) %	0 %	(1) %
Equity in (losses) earnings of associated companies, net	(2)		4
Percentage of net sales	0 %	0 %	0 %
Other non-operating (expense) income, net	(41)	7	(16)
Percentage of net sales	(1) %	0 %	0 %
Extraordinary loss, net of tax		(35)	
Percentage of net sales	0 %	(1) %	0 %

Restructuring Charges. During the 2006 fiscal year, we announced restructuring plans to downsize our workforce at ALTIS and at our chip card back-end activities in order to maintain competitiveness and reduce cost. As part of this and other restructuring measures, we agreed upon plans to lay off approximately 390 employees and recorded

restructuring charges in the 2007 fiscal year. During the 2007 fiscal year, we took further restructuring measures, mainly in response to the insolvency of one of our largest mobile phone customers, BenQ Mobile GmbH & Co. OHG, and in order to further streamline certain research and development locations. Approximately 280 jobs were affected worldwide, thereof approximately 120 in the German locations Munich, Salzgitter and Nuremberg. A large portion of these restructuring measures were completed during the 2007 fiscal year. The Infineon Complexity Reduction program (ICoRe) was launched in July 2007, aimed at reducing costs and seeking added efficiencies by optimizing process flows. To address rising risks in the current market environment, adverse currency trends and below benchmark margins, we implemented the IFX10+ cost-reduction program in the third quarter of the 2008 fiscal year. The IFX10+ program includes measured target areas including product portfolio management, manufacturing cost reductions, value chain optimization, processes efficiency,

Table of Contents

reorganization of our structure along our target markets, and reductions in workforce. Approximately 10 percent of Infineon Logic's workforce worldwide is expected to be impacted by IFX10+, which resulted in restructuring charges of 166 million in the 2008 fiscal year.

Other Operating (Expense) Income, net. In the 2006 fiscal year, other operating expense, net consisted mainly of goodwill and intangible assets impairment charges of 32 million which were partly offset by other operating income. In the 2007 fiscal year, other operating income, net consisted primarily of gains of 17 million from the sale of the polymer optical fiber business to Avago, and gains of 3 million from the sale of the Sci-Worx business to Silicon Image Inc. In the 2008 fiscal year, other operating expense, net increased to 43 million and primarily resulted from impairment charges of 130 million. These impairment charges were partly offset by gains from sales of businesses of 79 million, and gains of 4 million resulting from the disposal of long-term assets.

Equity in (Losses) Earnings of Associated Companies, net. In the 2008 fiscal year, equity in earnings of associated companies, net was 4 million, and primarily reflected our share in the net income of the Bipolar joint venture with Siemens.

Other Non-Operating (Expense) Income, net. Other non-operating income and expense consists of various items in different periods not directly related to our principal operations, including gains and losses on sales of marketable securities. In the 2006 fiscal year, other non-operating expense, net consisted mainly of 30 million related to net losses from foreign currency derivatives and foreign currency transactions and investment-related impairment charges of 13 million, partly offset by gains from the sale of investments. In the 2007 fiscal year, other non-operating income, net included primarily gains and losses from financial instruments transactions. In the 2008 fiscal year, other non-operating expense, net comprised net losses from financial investments and related impairments charges.

Extraordinary Loss, net of tax. During the quarter ended March 31, 2007, we entered into agreements with Molstanda Vermietungsgesellschaft mbH (Molstanda) and a financial institution. Molstanda is the owner of a parcel of land located in the vicinity of our headquarters south of Munich. Pursuant to FASB Interpretation No. 46 (revised December 2003), *Consolidation of Variable Interest Entities - an Interpretation of ARB No. 51* (FIN 46R), we determined that Molstanda is a variable interest entity since it does not have sufficient equity to demonstrate that it could finance its activities without additional financial support, and as a result of the agreements we became its primary beneficiary. Accordingly, we consolidated the assets and liabilities of Molstanda beginning in the second quarter of the 2007 fiscal year. Since Molstanda is not considered a business pursuant to FIN 46R, the 35 million excess in fair value of liabilities assumed and consolidated of 76 million, over the fair value of the newly consolidated identifiable assets of 41 million, was recorded as an extraordinary loss during the second quarter of the 2007 fiscal year. Due to our cumulative loss situation no tax benefit was provided on this loss. We subsequently acquired the majority of the outstanding capital of Molstanda during the fourth quarter of the 2007 fiscal year. In August 2007, we entered into an agreement to sell part of the acquired parcel of land to a third party developer-lessor in connection with the construction and lease of Qimonda's new headquarters office in the south of Munich.

Table of Contents***Earnings Before Interest and Taxes (EBIT)***

EBIT of our separate reporting segments were as follows:

	For the years ended September 30,		
	2006	2007	2008
	(in millions)		
EBIT:			
Automotive, Industrial & Multimarket	240	291	315
Communication Solutions	(234)	(165)	(73)
Other Operating Segments	4	(12)	(3)
Corporate and Eliminations	(146)	(77)	(287)
Total	(136)	37	(48)
Adjust: Interest expense, net	(67)	(40)	(26)
Extraordinary loss, net of tax		35	
(Loss) income before income taxes, discontinued operations, and extraordinary loss	(203)	32	(74)

EBIT developments of our reporting segments were as follows:

Automotive, Industrial & Multimarket In the 2007 fiscal year, EBIT improved due to an increase in net sales despite being negatively impacted by additional corporate expense allocations subsequent to the Qimonda carve out. In addition, a 17 million gain was realized from the sale of our POF business to Avago in June 2007, which also had a positive impact on EBIT in the 2007 fiscal year. In the 2008 fiscal year, EBIT improved mainly due to gains of 68 million realized from the sale of 40 percent of our interest in Bipolar to Siemens and the sale of our HDD business to LSI. These gains were partly offset by impairment charges of 25 million. Furthermore, the negative impact from ongoing pricing pressure could be nearly offset by improvements primarily in the chip card business.

Communication Solutions In the 2007 fiscal year, EBIT improved despite a decline in net sales, as no significant charges were recognized and further cost reduction measures were successfully implemented. The EBIT improvement in the 2008 fiscal year was mainly driven by the strong increase in revenue and despite the negative impact of currency fluctuations between the U.S. dollar and the Euro. Segment EBIT in the 2008 fiscal year included a write-off of 14 million of acquired in-process R&D in connection with the acquisition of the mobility products business of LSI.

Other Operating Segments EBIT in the 2008 fiscal year improved as a result of better gross margins.

Corporate and Eliminations EBIT improved in the 2007 fiscal year mainly due to reduced unabsorbed idle production cost, lower stock option expense, and a revision to accrued personnel costs. EBIT in the 2008 fiscal year decreased significantly primarily as a result of restructuring costs incurred in connection with the IFX10+ program and charges resulting from the reclassification of the ALTIS disposal group into the held and used category.

Interest Expense, Net

We derive interest income primarily from cash and cash equivalents and marketable securities. Interest expense is primarily attributable to bank loans and convertible/exchangeable notes, and is net of interest capitalized on manufacturing facilities under construction.

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Interest expense, net	(67)	(40)	(26)
Percentage of net sales	(2) %	(1) %	(1) %

Table of Contents

Interest expense relates principally to our convertible subordinated notes issued in February 2002 and in June 2003, our exchangeable subordinated notes issued in September 2007 and, to a lesser extent, bank loans and interest on outstanding tax obligations. In February 2007, we redeemed the remaining outstanding principal of the convertible subordinated notes issued in 2002, which resulted in a decrease in interest expense in the 2007 and 2008 fiscal years. The partial repurchase of our convertible subordinated notes due 2010 during the third quarter of the 2008 fiscal year, as well as the amortization of our syndicated credit facility, further contributed to lowering our overall interest expense in the 2008 fiscal year, more than offsetting the impact of coupon payments on our exchangeable subordinated notes issued in September 2007.

Income Taxes

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Income tax expense	(47)	(69)	(61)
Percentage of net sales	(1)%	(2)%	(1) %
Effective tax rate	(24)%	149 %	(68) %

Generally, deferred tax assets in tax jurisdictions that have a three-year cumulative loss are subject to a valuation allowance excluding the impact of forecasted future taxable income. In the 2006, 2007 and 2008 fiscal years we continued to have a three-year cumulative loss in certain tax jurisdictions and, accordingly, we recorded increases in the valuation allowance of 161 million, 58 million, and 185 million in those periods, respectively. We assess our deferred tax asset position on a regular basis. Our ability to realize benefits from our deferred tax assets is dependent on our ability to generate future taxable income sufficient to utilize tax loss carry-forwards or tax credits before expiration. We expect to continue to recognize no tax benefits in these jurisdictions until we have ceased to be in a cumulative loss position for the preceding three-year period.

Loss from discontinued operations, net of tax

The results of Qimonda, presented in the consolidated statements of operations as discontinued operations for the 2006, 2007 and 2008 fiscal years, consist of the following components:

	For the years ended September 30,		
	2006	2007	2008
	(in millions)		
Net sales	3,815	3,608	1,785
Costs and expenses	(3,719)	(3,894)	(3,324)
Loss on measurement to fair value less costs to sell			(1,303)
Income (loss) from discontinued operations, before tax	96	(286)	(2,842)
Income tax expense	(114)	(10)	(145)
Loss from discontinued operations, net of tax	(18)	(296)	(2,987)

In the 2008 fiscal year Qimonda's total revenues decreased by 1,823 million, or 51 percent, to 1,785 million from 3,608 million in the 2007 fiscal year. Primarily responsible for this decrease was a significant decrease in DRAM prices and to a lesser extent the average exchange rate of the U.S. dollar against the euro. These decreases were partly offset by increases of higher bit shipments.

Cost and expenses of Qimonda decreased by 570 million from 3,894 million in the 2007 fiscal year to 3,324 million in the 2008 fiscal year, mainly as a result of a decrease in cost of goods sold. This decrease was partly offset by restructuring charges, impairment charges and higher R&D expenses primarily related to Qimonda's efforts in the new Buried Wordline technology for 65-nanometers and 46-nanometers. Restructuring expenses of Qimonda during the 2008 fiscal year related mainly to the relocation of the back-end production in Malaysia, the combination of the research centers in North America, a comprehensive cost reduction program, the shutdown of our Flash activities in Italy and a global repositioning program. During the 2008 fiscal year, Qimonda recognized impairment charges for goodwill and for long-lived assets of the Richmond 200-millimeter facility. Additionally, as a result of

Table of Contents

Qimonda's agreement to sell its 35.6 percent interest in Inotera Memories Inc. (Inotera) to Micron Technology, Inc. for US\$400 million, Qimonda recognized impairment charges to reduce the carrying value of its investment in Inotera to the sales price less costs to sell.

Net Loss

In the 2006 fiscal year, the net loss incurred primarily reflected charges resulting from allowances recorded in response to the insolvency of BenQ's German subsidiary, losses recognized in connection with the initial public offering of Qimonda, and the settlement of litigation. In addition, in the 2006 fiscal year we began to recognize the fair value of employee stock options in earnings, which further contributed to the net loss. In the 2007 fiscal year, the most significant factor contributing to the increase in net loss was the significant deterioration of results from discontinued operations, net of tax, primarily due to Qimonda's net loss, which resulted from the deterioration in memory product prices and a weaker U.S. dollar, and consequently a significant decrease in Qimonda's gross margin. Net loss from discontinued operations in the 2007 fiscal year also included an \$84 million loss from the sale of 28.75 million Qimonda ADSs. Restructuring charges of \$45 million, and the extraordinary loss of \$35 million resulting from the consolidation of Molstanda also contributed to the net loss in the 2007 fiscal year. In the 2008 fiscal year, the increase in net loss was primarily due to the increase in losses from discontinued operations, resulting from our share in Qimonda's net loss, and the write-downs of \$1,303 million to reduce Qimonda to its estimated current fair value less costs to sell. Furthermore, restructuring charges of \$181 million, primarily related to the IFX10+ program, and impairment charges, contributed to the net loss in the 2008 fiscal year.

Financial Condition

	As of September 30,		
	2007	2008	Percentage Change year-on-year
	(in millions, except percentages)		
Current assets	8,491	4,773	(44) %
thereof: assets held for disposal	5,653	2,224	(61) %
Non-current assets	2,262	2,310	2 %
Total assets	10,753	7,083	(34) %
Current liabilities	3,468	3,643	5 %
thereof: liabilities held for disposal	1,897	2,091	10 %
Non-current liabilities	1,338	1,219	(9) %
Total liabilities	4,806	4,862	1 %
Minority Interests	1,033	457	(56) %
Shareholders' equity	4,914	1,764	(64) %

As of September 30, 2008, our total assets and current assets decreased in comparison to the prior year end, primarily due to a decrease in current assets of 44 percent, or \$3,718 million. This decrease primarily related to a decrease in

assets held for disposal of 3,429 million, primarily due to the write-down to reduce Qimonda to its estimated current fair value less costs to sell. The remaining decrease in assets held for disposal primarily relates to changes at Qimonda. Our gross cash position, representing cash and cash equivalents and marketable securities from continuing operations, decreased from 1,283 million by 391 million as of September 30, 2007, to 892 million as of September 30, 2008. This decrease was incurred as cash used in investing activities from continuing operations and cash used in financing activities from continuing operations were higher than cash provided by operating activities. In addition, cash and cash equivalents and marketable securities in the amount of 121 million were reclassified to other current assets as of September 30, 2008.

As of September 30, 2008, non-current assets increased slightly compared to prior year end, resulting primarily from an increase in intangible assets, which resulted from the acquisition of the mobility product business from LSI and the purchase of Primarion. This increase was despite the reclassification of ALTIS

Table of Contents

partly offset by the decrease of property, plant and equipment, net as capital expenditures were more than offset by depreciation, amortization and impairment charges during the 2008 fiscal year.

Total liabilities increased as of September 30, 2008 compared to September 30, 2007 by 56 million. The increase reflects an increase of current liabilities of 175 million, primarily resulting from an increase of liabilities held for disposal and other current liabilities. The increase in other current liabilities mainly relates to liabilities in connection with the IFX10+ program. This increase was partly offset by decreases in short-term debt and current maturities of long-term debt, and trade accounts payable.

The increase of current liabilities was partly offset by the decrease of non current liabilities of 119 million, primarily resulting from a decrease of long-term debt of 98 million as we repurchased convertible subordinated notes due 2010 with a notional amount of 100 million during the 2008 fiscal year. Furthermore, deferred income taxes decreased as of September 30, 2008 compared to the prior year end by 20 million.

The decrease in minority interests resulted primarily from the minority's share of Qimonda's net loss.

Total Shareholder's equity decreased by 3,150 million as of September 30, 2008, primarily as a result of the net loss incurred in the 2008 fiscal year.

Financial Ratios

	As of September 30,		
	2006	2007	2008
Non-current asset intensity ⁽¹⁾	21 %	21 %	33 %
Current asset intensity ⁽²⁾	79 %	79 %	67 %
Degree of wear of fixed assets ⁽³⁾	78 %	79 %	81 %
Depreciation rate of fixed assets ⁽⁴⁾	8 %	8 %	7 %
Inventory intensity ⁽⁵⁾	5 %	6 %	9 %
Inventory turnover ⁽⁶⁾	5.0	4.6	4.5
Inventory turnover in days ⁽⁷⁾	49	52	53
Days sales outstanding ⁽⁸⁾	49	53	50
Equity ratio ⁽⁹⁾	45 %	46 %	25 %
Return on equity ⁽¹⁰⁾	(5) %	(7) %	(94) %
Return on assets ⁽¹¹⁾	(2) %	(3) %	(35) %
Equity-to-fixed-assets ratio ⁽¹²⁾	316 %	336 %	135 %
Debt-to-equity ratio ⁽¹³⁾	35 %	29 %	71 %

The aforementioned financial condition ratios are calculated as follows:

(1) Non-current asset intensity = non-current assets / total assets

(2) Current asset intensity = current assets / total assets

(3) Degree of wear of fixed assets = accumulated depreciation on fixed assets / historical costs of fixed assets at the end of the fiscal year

(4)

Depreciation rate of fixed assets = annual depreciation of fixed assets / historical costs of fixed assets at the end of the fiscal year

- (5) Inventory intensity = inventory / total assets
- (6) Inventory turnover = Cost of goods sold / average inventory
- (7) Inventory turnover in days = average inventory x 360 days / annual net sales
- (8) Days sales outstanding = average accounts receivable x 360 days / annual net sales
- (9) Equity ratio = equity / total assets
- (10) Return on equity = net income (loss) for the year / average equity
- (11) Return on assets = net income (loss) for the year / average total assets
- (12) Equity-to-fixed-assets ratio = equity / property, plant and equipment
- (13) Debt-to-equity ratio = (short-term debt + long-term debt) / equity

The average of a balance sheet position is calculated as the arithmetic average of the amount as of the balance sheet dates of the current and the prior years.

In the 2008 fiscal year, the net loss incurred was primarily the result of Qimonda's operating losses and the recorded write-down in order to remeasure Qimonda to its current fair value less cost to sell.

Table of Contents

Accordingly, our equity and total assets decreased significantly. This resulted in significant decreases in non-current asset intensity, current asset intensity, equity ratio, return on equity, return on assets and equity-to-fixed assets ratio.

In the 2008 fiscal year, lower net capital expenditures in property, plant and equipment resulted in an increase in our degree of wear of fixed assets and a decrease in our depreciation rate of fixed assets.

The debt-to-equity ratio significantly increased in the 2008 fiscal year due to the equity decrease. In the 2007 fiscal year the debt-to-equity ratio had decreased due to the redemption of the remaining outstanding principal amount of 640 million of convertible subordinated notes issued in 2002, partially offset by the issuance of 215 million in exchangeable subordinated notes due in 2010.

Liquidity**Cash Flow**

Our consolidated statements of cash flows show the sources and uses of cash and cash equivalents during the reported periods. They are of key importance for the evaluation of our financial position.

Cash flows from investing and financing activities are both indirectly determined based on payments and receipts. Cash flows from operating activities are determined indirectly from net loss. The changes in the balance sheet items have been adjusted for the effects of foreign currency exchange fluctuations and for changes in the scope of consolidation. Therefore, they do not conform to the corresponding changes in the respective balance sheet line items.

	For the years ended September 30,		
	2006	2007	2008
	(in millions)		
Net cash provided by operating activities from continuing operations	677	227	535
Net cash used in investing activities from continuing operations ⁽¹⁾	(52)	(20)	(620)
Net cash used in financing activities from continuing operations	(11)	(214)	(230)
Net increase (decrease) in cash and cash equivalents from discontinued operations	298	(174)	(318)
Net increase (decrease) in cash and cash equivalents	912	(181)	(633)

⁽¹⁾ In the 2006 fiscal year the amount includes a 119 million cash increase as a result of the initial consolidation of ALTIS.

Cash provided by operating activities from continuing operations was 535 million in the 2008 fiscal year, and reflected mainly the loss from continuing operations of 135 million, which is net of non-cash charges for depreciation and amortization of 542 million, impairment charges of 135 million and a 14 million charge for in-process R&D acquired from LSI. Also included in loss from continuing operations were gains from sales of businesses of 79 million. Cash provided by operating activities from continuing operations was negatively impacted by the changes in operating assets and liabilities of 44 million, primarily resulting from an increase in other current assets of 77 million.

Net cash used in investing activities from continuing operations of 620 million in the 2008 fiscal year mainly reflects capital expenditures of 353 million for the acquisition of the mobility products business of LSI and Primarion, and 312 million for the purchase of property, plant and equipment. These cash outflows were partially offset by proceeds from the sale of businesses and interests in subsidiaries of 122 million, and by net proceeds from the sale and purchase of marketable securities of 27 million.

Net cash used in financing activities from continuing operations increased by 16 million to 230 million in the 2008 fiscal year. During the 2008 fiscal year, we made repayments of short-term and long-term debt of 294 million, of which 98 million related to the repurchase of a notional amount of 100 million of convertible subordinated notes due 2010. We also made dividend payments to minority interest holders of 80 million, which were partly offset by proceeds from issuance of long-term debt of 149 million.

Table of Contents

Net decrease in cash and cash equivalents from discontinued operations was 318 million in the 2008 fiscal year compared to 174 million in the prior year. The net decrease in cash and cash equivalents from discontinued operations was mainly due to Qimonda's net cash used in operating activities which was partly offset by Qimonda's net cash provided by financing activities. Qimonda's cash flow from operating activities decreased significantly from net cash provided of 980 million in the 2007 fiscal year to net cash used of 659 million in the 2008 fiscal year. This was mainly caused by Qimonda's net loss, which was largely a result of lower revenues due to the strong decline in average selling prices as compared to the prior year. This negative impact on Qimonda's cash flow from operating activities was partly offset by working capital improvements resulting from a decrease in its inventories and trade accounts receivable. Qimonda's cash flow from operating activities was also negatively impacted by a decrease in trade accounts payable in the 2008 fiscal year compared to the 2007 fiscal year. Qimonda's net cash provided by financing activities was 337 million in the 2008 fiscal year and refers mainly to Qimonda's issuance of US\$248 million of convertible notes due 2013 from which Qimonda raised 168 million. Furthermore, drawings under several short-term and long-term loan agreements net of repayments and partially offset by redemptions under capital lease agreements contributed to Qimonda's net cash provided by financing activities.

Free Cash Flow

We define free cash flow as cash from operating and investing activities from continuing operations excluding purchases or sales of marketable securities. Since we hold a substantial portion of our available monetary resources in the form of readily available marketable securities, and operate in a capital-intensive industry, we report free cash flow to provide investors with a measure that can be used to evaluate changes in liquidity after taking capital expenditures into account. It is not intended to represent the residual cash flow available for discretionary expenditures, since debt service requirements or other non-discretionary expenditures are not deducted. Free cash flow includes only amounts from continuing operations, and is determined as follows from the consolidated statements of cash flows:

	For the years ended September 30,		
	2006	2007	2008
	(in millions)		
Net cash provided by operating activities from continuing operations	677	227	535
Net cash used in investing activities from continuing operations ⁽¹⁾	(52)	(20)	(620)
Sales of marketable securities, net	(376)	(266)	(27)
Free cash flow	249	(59)	(112)

⁽¹⁾ In the 2006 fiscal year, the amount includes a 119 million cash increase as a result of the initial consolidation of ALTIS.

Free cash flow was negative 112 million in the 2008 fiscal year, compared to negative 59 million in the 2007 fiscal year. The decrease in free cash flow was primarily due to higher net cash used in investing activities from continuing operations of 620 million, partly offset by increased net cash provided by operating activities from continuing operations of 535 million.

Table of Contents**Net Cash Position**

The following table presents our gross and net cash positions and the maturity of debt. It is not intended to be a forecast of cash available in future periods.

As of September 30, 2008	Total	Less than 1 year	Payments due by period				
			1-2 years	2-3 years	3-4 years	4-5 years	After 5 years
			(in millions)				
Cash and cash equivalents	749	749					
Marketable securities	143	143					
Gross cash position	892	892					
Less:							
Long-term debt	1,051		861	82	68	40	
Short-term debt and current maturities	207	207					
Total financial debt	1,258	207	861	82	68	40	
Net cash position	(366)	685	(861)	(82)	(68)	(40)	

Our gross cash position, representing cash and cash equivalents plus marketable securities, decreased to 892 million at September 30, 2008, compared with 1,283 million at the prior year end. The decrease was mainly due to the negative free cash flow of 112 million, the repurchase of convertible subordinated notes due 2010 in the principal outstanding amount of 100 million, and the reclassification of cash and cash equivalents and marketable securities in the amount of 121 million into other current assets as of September 30, 2008.

Long-term debt principally consists of convertible and exchangeable subordinated notes that were issued in order to strengthen our liquidity position and allow us more financial flexibility in conducting our business operations. The total notional amount of outstanding convertible and exchangeable notes as of September 30, 2008 amounted to 815 million.

On June 5, 2003, we issued 700 million in convertible subordinated notes due 2010 at par in an underwritten offering to institutional investors in Europe. The notes are unsecured and accrue interest at 5 percent per year. The notes are convertible, at the option of the holders of the notes, into a maximum of 68.4 million ordinary shares of our company, at a conversion price of 10.23 per share through maturity. During the third quarter of the 2008 fiscal year, we repurchased a notional amount of 100 million of convertible subordinated notes due 2010. The repurchase was made out of available cash. These notes were subsequently cancelled.

On September 26, 2007, we issued 215 million in exchangeable subordinated notes due 2010 at par in an underwritten offering to institutional investors in Europe. The notes are unsecured and accrue interest at 1.375 percent per year. The notes are exchangeable for a maximum of 20.5 million Qimonda ADSs, at an exchange price of 10.48 per ADS at any time during the exchange period through maturity. Subsequent to September 30, 2008, we repurchased notional amounts of 95 million and 22 million of our exchangeable subordinated notes due 2010 and our convertible

subordinated notes due 2010, respectively. The repurchases were made out of available cash.

Our net cash position, meaning cash and cash equivalents, plus marketable securities, less total financial debt, decreased by 240 million to negative 366 million at September 30, 2008, compared with negative 126 million at September 30, 2007, principally due to negative free cash flow and dividend payments to minority interest holders.

To secure our cash position and to keep flexibility with regards to liquidity, we have implemented a policy with risk limits for the amounts deposited with respect to the counterparty, credit rating, sector, duration, credit support and type of instrument.

Table of Contents**Capital Requirements**

We require capital in the 2009 fiscal year to:

Lend funds to Qimonda (see Recent Developments Related to Qimonda);

Finance our operations;

Make scheduled debt payments;

Settle contingencies if they occur; and

Make planned capital expenditures.

We expect to meet these requirements through:

Cash flows generated from operations;

Cash on hand and securities we can sell; and

Available credit facilities.

As of September 30, 2008, we require funds for the 2009 fiscal year aggregating 876 million, consisting of 207 million for short-term debt payments and 669 million for commitments. In addition, we may need up to 31 million for currently known and estimable contingencies. We also plan to invest approximately 200 million in capital expenditures. We have a gross cash position of 892 million as of September 30, 2008, and also the ability to draw funds from available credit facilities of 541 million.

We will need to continue to generate significant cash going forward in order to fund our investments and meet scheduled debt repayments. Given the recent trading price of our ordinary shares and Qimonda ADSs, it is unlikely that a noteholder would convert or exchange its notes for our ordinary shares or Qimonda ADSs, as applicable. Therefore, we may be required to find an alternative source of funds, to repay the outstanding principal and accrued interest on the convertible and exchangeable notes in June and August 2010, respectively.

Commitments and Contingencies

As of September 30, 2008 ⁽¹⁾	Total	Payments Due/Expirations by Period					After 5 years
		Less than 1 year	1-2 years	2-3 years	3-4 years	4-5 years	
(in millions)							
Contractual commitments:							
Operating lease payments	776	75	63	59	58	56	465
Unconditional purchase commitments	634	594	18	11	3	4	4

Total commitments	1,410	669	81	70	61	60	469
Other contingencies:							
Guarantees ⁽²⁾	97	11		5	14	3	64
Contingent government grants ⁽³⁾	47	20	12	4	5	6	
Total contingencies	144	31	12	9	19	9	64

- (1) Certain payments of obligations or expiration of commitments that are based on the achievement of milestones or other events that are not date-certain are included for purposes of this table, based on our estimate of the reasonably likely timing of payments or expirations in each particular case. Actual outcomes could differ from those estimates.
- (2) Guarantees are mainly issued for the payment of import duties, rentals of buildings and contingent obligations related to government grants received.
- (3) Contingent government grants refer to amounts previously received, related to the construction and financing of certain production facilities, which are not guaranteed otherwise and could be refundable if the total project requirements are not met.

The above table should be read together with note 34 to our consolidated financial statements for the year ended September 30, 2008.

Table of Contents***Off-Balance Sheet Arrangements***

We issue guarantees in the normal course of business, mainly for the payment of import duties, rentals of buildings and contingent obligations related to government grants received. As of September 30, 2008, the undiscounted amount of potential future payments for guarantees was 97 million.

Capital Expenditures

	For the years ended September 30,		
	2006	2007	2008
	(in millions)		
Continuing operations	640	498	312

Depending on market developments and our business situation we currently expect to invest approximately 200 million in property, plant and equipment capital expenditures in the 2009 fiscal year, principally for our manufacturing facilities in Malacca, Malaysia, and in Kulim, Malaysia. We also continuously seek to improve productivity and upgrade technology at existing facilities. As of September 30, 2008, 44 million of this amount was committed and included in unconditional purchase commitments. Due to the lead times between ordering and delivery of equipment, a substantial amount of capital expenditures typically is committed well in advance.

Credit Facilities

We have established both short- and long-term credit facilities with a number of different financial institutions in order to meet our anticipated funding requirements. These facilities, which aggregate 987 million, of which 541 million remained available at September 30, 2008, comprise the following:

Term	Nature of financial institution commitment	Purpose/intended use	As of September 30, 2008		
			Aggregate facility	Drawn	Available
			(in millions)		
Short-term	firm commitment	general corporate purposes, working capital, guarantees	504	139	365
Short-term	no firm commitment	working capital, cash management	176		176
Long- term ⁽¹⁾	firm commitment	project finance	307	307	
Total			987	446	541

⁽¹⁾ Including current maturities.

In September 2004, we executed a \$400/ 400 million syndicated credit facility with a five-year term, which was subsequently reduced to \$345/ 300 million in August 2006. The facility consists of two tranches. Tranche A is a term loan originally intended to finance the expansion of the Richmond, Virginia, manufacturing facility. In January 2006,

we drew \$345 million under Tranche A, on the basis of a repayment schedule that foresees equal installments falling due in March and September each year. At September 30, 2008, \$125 million was outstanding under Tranche A. Tranche B, which is a multicurrency revolving facility to be used for general corporate purposes, remained undrawn at September 30, 2008. The facility has customary financial covenants, and drawings bear interest at market-related rates that are linked to financial performance. The lenders of this credit facility have been granted a negative pledge relating to the future financial indebtedness of the Company with certain permitted encumbrances.

At September 30, 2008, we were in compliance with our debt covenants under the relevant facilities.

We plan to fund our working capital and capital requirements from cash provided by operations, available funds, bank loans, government subsidies and, if needed, the issuance of additional debt or equity securities. See Risk Factors Our business could suffer if we do not have adequate access to capital . We have also applied for governmental subsidies in connection with certain capital expenditure projects, but can provide no assurance that such subsidies will be granted on a timely basis or at all. We can provide

Table of Contents

no assurance that we will be able to obtain additional financing for our research and development, working capital or investment requirements or that any such financing, if available, will be on terms favorable to us.

Taking into consideration the financial resources available to us, including our internally generated funds and currently available banking facilities, we believe that we will be in a position to fund our capital requirements in the 2009 fiscal year.

Pension Plan Funding

Our projected pension benefit obligation, which takes into account future compensation increases, amounted to 377 million at September 30, 2008, compared to 415 million at September 30, 2007. The fair value of plan assets as of September 30, 2008 was 350 million, compared to 381 million as of September 30, 2007.

The actual return on plan assets between the last measurement dates amounted to negative 7.9 percent, or (27) million, for domestic (German) plans and negative 5.2 percent, or (2) million, for foreign plans, compared to the expected return on plan assets for that period of 6.5 percent for domestic plans and 7.0 percent for foreign plans. We have estimated the return on plan assets for the next fiscal year to be 7.1 percent, or 14 million, for domestic plans and 7.2 percent, or 3 million, for foreign plans.

At September 30, 2007 and 2008, the combined funding status of our pension plans reflected an under-funding of 34 million and 27 million, respectively.

Our investment approach with respect to the pension plans involves employing a sufficient level of flexibility to capture investment opportunities as they occur, while maintaining reasonable parameters to ensure that prudence and care are exercised in the execution of the investment program. The pension plans' assets are invested with several investment managers. The plans employ a mix of active and passive investment management programs. Considering the duration of the underlying liabilities, a portfolio of investments of plan assets in equity securities, debt securities and other assets is targeted to maximize the long-term return on plan assets for a given level of risk. Investment risk is monitored on an ongoing basis through periodic portfolio reviews, meetings with investment managers and liability measurements. Investment policies and strategies are periodically reviewed to ensure the objectives of the plans are met considering any changes in benefit plan design, market conditions or other material items.

Our asset allocation targets for pension plan assets are based on our assessment of business and financial conditions, demographic and actuarial data, funding characteristics, related risk factors, market sensitivity analyses and other relevant factors. The overall allocation is expected to help protect the plans' level of funding while generating sufficiently stable real returns (i.e., net of inflation) to meet current and future benefit payment needs. Due to active portfolio management, the asset allocation may differ from the target allocation up to certain limits. As a matter of policy, our pension plans do not invest in Infineon shares.

Financial Instruments

We periodically enter into derivatives, including foreign currency forward and option contracts as well as interest rate swap agreements. The objective of these transactions is to reduce the impact of interest rate and exchange rate fluctuations on our foreign currency denominated net future cash flows. We do not enter into derivatives for trading or speculative purposes.

Table of Contents**Employees**

The following table indicates the composition of our workforce by function and region at the end of the fiscal years indicated.

	As of September 30,		
	2006	2007	2008
Function:			
Production	20,528	20,376	19,358
Research & Development	5,989	5,833	6,273
Sales & Marketing	1,781	1,832	1,905
Administrative	1,551	1,557	1,583
Infineon Logic	29,849	29,598	29,119
Qimonda	11,802	13,481	12,224
Total	41,651	43,079	41,343
Region:			
Germany	11,052	10,151	10,053
Europe	5,578	5,564	5,192
North America	532	581	821
Asia/Pacific	12,497	13,145	12,897
Japan	149	157	156
Other	41		
Infineon Logic	29,849	29,598	29,119
Qimonda	11,802	13,481	12,224
Total	41,651	43,079	41,343

In the 2007 fiscal year, the number of employees in our logic business decreased in Germany primarily as a result of the phase out of manufacturing at Munich-Perlach, and the restructuring program initiated following the insolvency of BenQ's German subsidiary, but increased in the Asia/Pacific region due to expansion of production in Kulim, Malaysia, and research and development in Malaysia and China.

During the 2008 fiscal year, the number of employees in our logic business decreased slightly, primarily due to the foundation of the Bipolar joint venture with Siemens and further decreases of production employees primarily in Asia/Pacific. These decreases were partly offset by employees that joined the company as a result of the acquisitions we made during the year.

Critical Accounting Policies

Our results of operations and financial condition are dependent upon accounting methods, assumptions and estimates that we use as a basis for the preparation of our consolidated financial statements. We have identified the following critical accounting policies and related assumptions, estimates and uncertainties, which we believe are essential to understanding the underlying financial reporting risks and the impact that these accounting methods, assumptions, estimates and uncertainties have on our reported financial results.

Revenue Recognition

We generally market our products to a wide variety of customers and a network of distributors. Our policy is to record revenue when persuasive evidence of an arrangement exists, the price is fixed or determinable, shipment is made and collectability is reasonably assured. We record reductions to revenue for estimated product returns and allowances for discounts and price protection, based on actual historical experience, at the time the related revenue is recognized. We establish reserves for sales discounts, price protection allowances and product returns based upon our evaluation of a variety of factors, including industry demand. This process requires the exercise of substantial judgments in evaluating the above-

Table of Contents

mentioned factors and requires material estimates, including forecasted demand, returns and industry pricing assumptions.

In future periods, we may be required to accrue additional provisions due to (1) deterioration in the semiconductor pricing environment, (2) reductions in anticipated demand for semiconductor products or (3) lack of market acceptance for new products. If these or other factors result in a significant adjustment to sales discount and price protection allowances, they could significantly impact our future operating results.

We have entered into licensing agreements for our technology in the past, and anticipate that we will increase our efforts to monetize the value of our technology in the future. As with certain of our existing licensing agreements, any new licensing arrangements may include capacity reservation agreements with the licensee. Such transactions could represent multiple element arrangements pursuant to SEC Staff Accounting Bulletin (SAB) 104, *Revenue Recognition*, and Emerging Issues Task Force (EITF) Issue No. 00-21, *Revenue Arrangements with Multiple Elements*. The process of determining the appropriate revenue recognition in such transactions is highly complex and requires significant judgment, which includes evaluating material estimates in the determination of fair value and the level of our continuing involvement.

Recoverability of Long-Lived Assets

Our business is extremely capital-intensive, and requires a significant investment in property, plant and equipment. Due to rapid technological change in the semiconductor industry, we anticipate the level of capital expenditures to be significant in future periods. During the 2008 fiscal year, we spent 312 million on purchases of property, plant and equipment. At September 30, 2008, the carrying value of our property, plant and equipment was 1,311 million. We have acquired other businesses, which resulted in the generation of significant amounts of long-lived intangible assets, including goodwill. At September 30, 2008, we had long-lived intangible assets of 362 million.

In accordance with the provisions of Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards (SFAS) No. 142, *Goodwill and Other Intangible Assets*, we test goodwill and indefinite life intangible assets for impairment at least once a year.

We also review long-lived assets, including intangible assets, for impairment when events or changes in circumstances indicate that the carrying value of an asset may not be recoverable. Recoverability of assets to be held and used is measured by a comparison of the carrying value of an asset to future net cash flows expected to be generated by the asset. If such assets are considered to be impaired, the impairment recognized is measured by the amount by which the carrying value of the assets exceeds the fair value of the assets. Estimated fair value is generally based on either appraised value or discounted estimated future cash flows. Considerable management judgment is necessary to estimate discounted future cash flows. During the 2008 fiscal year, impairment charges of 133 million were recognized on long-lived assets.

We tested goodwill for impairment and recognized impairment charges of 7 million during the fiscal year ended September 30, 2006. The goodwill impairment charges in the 2006 fiscal year related primarily to our acquisition of Savan and Sci-Worx. We did not recognize any material goodwill impairment charges in the 2007 and 2008 fiscal years.

Valuation of Inventory

Historically, the semiconductor industry has experienced periods of extreme volatility in product demand and in industry capacity, resulting in significant price fluctuations. Since semiconductor demand is concentrated in such highly-volatile industries as wireless communications, wireline communications and the computer industry, this

volatility can be extreme. This volatility has also resulted in significant fluctuations in price within relatively short time-frames.

As a matter of policy, we value inventory at the lower of cost or market price. We review the recoverability of inventory based on regular monitoring of the size and composition of inventory positions, current economic events and market conditions, projected future product demand, and the pricing environment. This evaluation is inherently judgmental and requires material estimates, including both

Table of Contents

forecasted product demand and pricing environment, both of which may be susceptible to significant change. At September 30, 2008, total inventory was 663 million.

In future periods, write-downs of inventory may be necessary due to (1) reduced semiconductor demand in the industries we serve, including the computer industry and the wireless and wireline communications industries, (2) technological obsolescence due to rapid developments of new products and technological improvements, or (3) changes in economic or other events and conditions that impact the market price for our products. These factors could result in adjustments to the valuation of inventory in future periods, and significantly impact our future operating results.

Recoverability of Long-Term Investments

We have made a series of investments in companies that are principally engaged in the research and development, design, and manufacture of semiconductors and related products. At September 30, 2008, the carrying value of our long-term investments totaled 33 million.

Our accounting policy is to record an impairment of investments when the decline in fair value below carrying value is other-than-temporary. We assess declines in the value of investments to determine whether such decline is other-than-temporary, thereby rendering the investment impaired. This assessment is made by considering available evidence including changes in general market conditions, specific industry and investee data, the length of time and the extent to which the fair value has been less than cost, and our intent and ability to hold the investment for a period of time sufficient to allow for any anticipated recovery in fair value. We incurred 2 million in impairment charges of long-term investments in the 2008 fiscal year as a result of such impairment tests.

At September 30, 2008, our most significant long-term investment was our investment in Bipolar, which is a joint venture with Siemens.

The high cyclicality in the semiconductor industry could adversely impact the operations of these investments and their ability to generate future net cash flows. Furthermore, to the extent that these investments are not publicly traded, further judgments and estimates are required to determine their fair value. As a result, potential impairment charges to write-down such investments to net realizable value could adversely affect our future operating results.

While we have recognized all declines that are believed to be other-than-temporary, it is reasonably possible that individual investments in our portfolio may experience an other-than-temporary decline in value in the future if the underlying investee experiences poor operating results or the global equity markets experience future broad declines in value.

Realization of Deferred Tax Assets

At September 30, 2008, total net deferred tax assets were 413 million. Included in this amount are the tax benefits of net operating loss and credit carry-forwards of approximately 382 million, net of the valuation allowance. These tax loss and credit carry-forwards generally do not expire under current law.

We evaluate our deferred tax asset position and the need for a valuation allowance on a regular basis. The assessment requires the exercise of judgment on the part of our management with respect to, among other things, benefits that could be realized from available tax strategies and future taxable income, as well as other positive and negative factors. The ultimate realization of deferred tax assets is dependent upon our ability to generate the appropriate character of future taxable income sufficient to utilize loss carry-forwards or tax credits before their expiration. Since we have incurred a cumulative loss in certain tax jurisdictions over the three-year period ended September 30, 2008,

the impact of forecasted future taxable income is excluded from such an assessment. For these tax jurisdictions, the assessment was therefore based only on the benefits that could be realized from available tax strategies and the reversal of temporary differences in future periods.

As a result of this assessment, we increased the deferred tax asset valuation allowance in the 2007 and 2008 fiscal years by 58 million and 185 million, respectively, in order to reduce the deferred tax asset to an amount that is more likely than not expected to be realized in the future. We expect to continue to recognize low levels of deferred tax benefits in the 2009 fiscal year, until such time as taxable income is

Table of Contents

generated in tax jurisdictions that would enable us to utilize our tax loss carry-forwards in those jurisdictions.

The recorded amount of total deferred tax assets could be reduced if our estimates of projected future taxable income and benefits from available tax strategies are lowered, or if changes in current tax regulations are enacted that impose restrictions on the timing or extent of our ability to utilize tax loss and credit carry-forwards in the future.

Purchase Accounting

We have acquired businesses in the 2008 fiscal year, including the mobility products business from LSI, and Primarion. The acquisition of the mobility products business from LSI resulted in an in-process research and development charge of 14 million. Both acquisitions resulted in long-term intangible assets and goodwill.

Accounting for business combinations requires the allocation of the purchase price to identifiable tangible and intangible assets and liabilities based upon their fair value. The allocation of purchase price is highly judgmental, and requires the extensive use of estimates and fair value assumptions, which can have a significant impact on operating results.

Pension Plan Accounting

Our pension benefit costs are determined in accordance with actuarial computations using the projected-unit-credit method, which rely on assumptions including discount rates and expected return on plan assets. Discount rates are established based on prevailing market rates for high-quality fixed-income instruments that, if the pension benefit obligation were settled at the measurement date, would provide the necessary future cash flows to pay the benefit obligation when due. The expected return on plan assets assumption is determined on a uniform basis, considering long-term historical returns, asset allocation, and future estimates of long-term investment returns. Other key assumptions for our pension costs are based on current market conditions. A significant variation in one or more of these underlying assumptions could have a material effect on the measurement of our long-term obligation.

We account for our pension-benefit liabilities and related postretirement benefit costs pursuant to SFAS No. 87, *Employers Accounting for Pensions*. We offer defined benefit pension plans, which generally specify the amount of pension benefit that each employee will receive for services performed during a specified period of employment. The amount of the employer's periodic contribution to a defined benefit pension plan is based on the total pension benefits that could be earned by all eligible participants.

Generally, if our total contribution to our pension plans for the period is not equal to the amount of net periodic pension cost as determined by the provisions of SFAS No. 87, we recognize the difference either as a liability or as an asset. Effective September 30, 2007, we adopted the recognition provision of SFAS No. 158, *Employer's Accounting for Defined Benefit Pension and Other Postretirement Plans - an amendment of FASB Statements No. 87, 88, 106, and 132(R)*, whereby we recognize the over-funded or under-funded status of our defined benefit postretirement plans as an asset or liability in our consolidated balance sheet. Changes in funded status will be recognized in the year in which the changes occur through other comprehensive income.

Consolidated Balance Sheets. Defined benefit plans determine the entitlements of their beneficiaries. The net present value of the total fixed benefits for service already rendered is represented by the actuarially calculated accumulated benefit obligation (ABO).

An employee's final benefit entitlement at regular retirement age may be higher than the fixed benefits at the measurement date due to future compensation or benefit increases. The net present value of this ultimate future benefit entitlement for service already rendered is represented by the projected benefit obligation (PBO), which is actuarially

calculated with consideration for future compensation increases.

The pension liabilities are equal to the PBO when the assumptions used to calculate the PBO such as discount rate, compensation increase rate and projected future pension increases are achieved. In the case of funded plans, the market value of the external assets is offset against the benefit obligations. The

Table of Contents

net liability or asset recorded on the consolidated balance sheets is equal to the under- or over-funding of the PBO in this case, when the expected return on plan assets is subsequently realized.

Differences between actual experience and the assumptions made for the compensation increase rate and projected future pension increases, as well as the differences between actual and expected returns on plan assets, generally result in the unrecognized actuarial gains or losses, which are reflected as a separate component of shareholders' equity.

Consolidated Statements of Operations. The recognized expense related to pension plans and similar commitments in the consolidated statements of operations is referred to as net periodic pension cost (NPPC) and consists of several separately calculated and presented components, including service cost, which is the actuarial net present value of the part of the PBO for the service rendered in the respective fiscal year; the interest cost for the expense derived from the addition of accrued interest on the PBO at the end of the preceding fiscal year on the basis of the identified discount rate; and the expected return on plan assets in the case of funded benefit plans. Actuarial gains and losses, resulting for example from an adjustment of the discount rate, and asset gains and losses, resulting from a deviation of actual and expected return on plan assets, are included in the net pension cost for the fiscal year if, as of the beginning of the fiscal year, the unrecognized net gains or losses exceed 10 percent of the greater of the projected benefit obligation or the market value of the plan assets. The amortization is the excess divided by the average remaining service period of active employees expected to receive benefits under the plan.

In the consolidated statements of operations, NPPC is allocated among functional costs (cost of sales, research and development expenses, selling and general administrative expenses), according to the function of the employee groups accruing benefits.

In the consolidated statements of operations, NPPC expenses before income taxes for our Infineon Logic pension plans for the fiscal years ended September 30, 2006, 2007 and 2008, were 31 million, 34 million and 17 million, respectively.

The consolidated balance sheets include the following significant components related to pension plans and similar commitments:

	As of September 30,	
	2007	2008
	(in millions)	
Accumulated other comprehensive income	42	33
Less income tax effect	3	
Accumulated other comprehensive income, net of income taxes	45	33
Non-current pension assets	4	16
Current pension liabilities		1
Non-current pension liabilities	36	41

Consolidated Statements of Cash Flows. We make payments directly to the participants in the case of unfunded benefit plans and the payments are included in net cash used in operating activities. For funded pension plans, the participants are paid by the external pension fund and accordingly these payments are cash neutral to us. In this case, our regular funding (service cost) and supplemental cash contributions result in net cash used in operating activities.

In the consolidated statements of cash flows, our principal pension and other postretirement benefits resulted in net cash used in operating activities from continuing operations of 5 million, 8 million and 6 million in the fiscal years ended September 30, 2006, 2007 and 2008, respectively.

Table of Contents

Pension benefits Sensitivity Analysis. A one percentage point change in the established assumptions used for the calculation of the NPPC for the 2009 fiscal year would result in the following impact on the NPPC for the 2009 fiscal year:

	Effect on net periodic pension costs	
	One percentage increase	One percentage decrease
	(in millions)	
Discount rate	(1)	4
Rate of compensation increase	2	(2)
Rate of projected future pension increases	4	(2)
Expected return on plan assets	(4)	3

Increases and decreases in the discount rate, rate of compensation increase and rate of projected future pension increases which are used in determining the PBO do not have a symmetrical effect on NPPC primarily due to the compound interest effect created when determining the present value of the future pension benefit. If more than one of the assumptions were changed simultaneously, the impact would not necessarily be the same as would be the case if only one assumption were changed in isolation.

For a discussion of our current funding status and the impact of these critical assumptions, see note 31 to our consolidated financial statements for the year ended September 30, 2008.

Contingencies

We are subject to various legal actions and claims, including intellectual property matters, which arise in and outside the normal course of business. Current proceedings are described under the heading Business Legal Matters .

We regularly assess the likelihood of any adverse outcome or judgments related to these matters, as well as estimating the range of possible losses and recoveries. Liabilities, including accruals for significant litigation costs, related to legal proceedings are recorded when it is probable that a liability has been incurred and the associated amount of the loss can be reasonably estimated. Where the estimated amount of loss is within a range of amounts and no amount within the range is a better estimate than any other amount or the range cannot be estimated, the minimum amount is accrued. Accordingly, we have accrued a liability and charged operating income in the accompanying consolidated financial statements related to certain asserted and unasserted claims existing as of each balance sheet date. As additional information becomes available, any potential liability related to these actions is assessed and the estimates are revised, if necessary. These accrued liabilities would be subject to change in the future based on new developments in each matter, or changes in circumstances, which could have a material impact on our results of operations, financial position and cash flows.

Transition to International Financial Reporting Standards (IFRS)

Beginning with the first quarter of the 2009 fiscal year, we will prepare our financial statements according to IFRS. For the years prior to the 2009 fiscal year, we have prepared our financial statements according to U.S. GAAP. As part of the transition to IFRS, we have published IFRS consolidated financial statements for the 2007 and 2008 fiscal years as supplemental information to the U.S. GAAP consolidated financial statements included elsewhere in this Annual Report on Form 20-F.

Quantitative and Qualitative Disclosure about Market Risk

The following discussion should be read in conjunction with notes 2, 32 and 33 to our consolidated financial statements for the fiscal year ended September 30, 2008.

Market risk is the risk of loss related to adverse changes in market prices of financial instruments, including those related to commodity prices, foreign exchange rates and interest rates. We are exposed to various financial market risks in the ordinary course of business transactions, primarily resulting from changes in commodity prices, foreign exchange rates and interest rates. We enter into diverse financial

Table of Contents

transactions with multiple counterparties to limit such risks. Derivative instruments are used only for hedging purposes and not for trading or speculative purposes.

Commodity Price Risk

We are exposed to commodity price risks with respect to raw materials used in the manufacture of our products. We seek to minimize these risks through our sourcing policies (including the use of multiple sources, where possible) and our operating procedures. We do not use derivative financial instruments to manage any exposure to fluctuations in commodity prices remaining after these operating measures.

In addition, a significant portion of the business of Qimonda is exposed to fluctuations in market prices for standard DRAM products. For these products, the sales price responds to market forces in a way similar to that of other commodities. This price volatility can be extreme and has resulted in significant fluctuations within relatively short time-frames. Qimonda attempts to mitigate the effects of volatility by continuously improving its cost position, by entering into new strategic partnerships and by focusing its product portfolio on application-specific products that are subject to less volatility, such as DRAM products for infrastructure, graphics, mobile and consumer applications.

Foreign Exchange and Interest Risk

Although we prepare our consolidated financial statements in Euro, major portions of our sales volumes as well as costs relating to the design, production and manufacturing of products are denominated in U.S. dollars. As a multinational company, our activities in markets around the world create cash flows in a number of different currencies. Exchange rate fluctuations may have substantial effects on our sales, our costs and our overall results of operations.

Table of Contents

The table below provides information about our derivative financial instruments that are sensitive to changes in foreign currency exchange and interest rates as of the end of our 2008 fiscal year. For foreign currency exchange forward contracts related to certain sale and purchase transactions and debt service payments denominated in foreign currencies, the table presents the notional amounts and the weighted average contractual foreign exchange rates. At September 30, 2008, our foreign currency forward contracts mainly had terms up to one year. Our interest rate swaps expire in 2010. We do not enter into derivatives for trading or speculative purposes.

Derivative Financial Instruments

	Contract amount buy/(sell) (in millions)	Average contractual forward exchange rate	Fair value September 30, 2008 (in millions)
Foreign currency forward contracts:			
U.S. dollar	157	1.39498	(4)
U.S. dollar	(213)	1.47112	(5)
Japanese yen	1	149.79970	
Japanese yen	(5)	153.12944	
Singapore dollar	29	2.06060	
Singapore dollar	(10)	2.02664	
Great Britain pound	9	0.79446	
Malaysian ringgit	52	4.86630	
Malaysian ringgit	(3)	4.89110	
Norwegian krone	2	8.03916

Currency Options purchased	(163)	1.5310	1
Interest rate swaps	500	n/a	(1)
Other	77	n/a	(1)
Fair value, net			(15)

Our policy with respect to limiting short-term foreign currency exposure generally is to economically hedge at least 75 percent of our estimated net exposure for the initial two-month period, at least 50 percent of our estimated net exposure for the third month and, depending on the nature of the underlying transactions, a significant portion for the periods thereafter. Part of our foreign currency exposure cannot be mitigated due to differences between actual and forecasted amounts. We calculate this net exposure on a cash-flow basis considering balance sheet items, actual orders received or made and all other planned revenues and expenses.

We record our derivative instruments according to the provisions of SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended. SFAS No. 133 requires all derivative instruments to be recorded on the balance sheet at their fair value. Gains and losses resulting from changes in the fair values of those derivatives are accounted for depending on the use of the derivative instrument and whether it qualifies for hedge accounting. During the 2008 fiscal year, we designated as cash flow hedges certain foreign exchange forward contracts and foreign exchange options related to highly probable forecasted sales denominated in U.S. dollars. We did not record any

ineffectiveness for these hedges for the 2008 fiscal year. However, we excluded differences between spot and forward rates and the time value from the assessment of hedge effectiveness and included this component of the financial instruments gain or loss as a part of cost of goods sold. We estimate that 4 million of net losses recognized directly in other comprehensive income as of September 30, 2008 will be reclassified into earnings during the 2009 fiscal year. All foreign exchange derivatives designated as cash flow hedges held as of September 30, 2008 have maturities of six months or less. Foreign exchange derivatives entered into to offset exposure to anticipated cash flows that do not meet the requirements for applying hedge accounting are marked to market at each reporting period, with unrealized gains and losses recognized in earnings. For the 2008 fiscal year, no gains or losses were reclassified from accumulated other

Table of Contents

comprehensive income as a result of the discontinuance of foreign exchanges cash flow hedges resulting from a determination that it was probable that the original forecasted transaction would not occur.

In the 2008 fiscal year, foreign exchange transaction losses were 0 and were offset by gains from our economic hedge transactions of 15 million, resulting in net foreign exchange gains of 15 million. This compares to foreign exchange losses of 13 million, which were offset by gains from our economic hedge transactions of 16 million, resulting in net foreign exchange losses of 3 million in the 2007 fiscal year. A large portion of our manufacturing, selling and marketing, general and administrative, and research and development expenses are incurred in currencies other than the Euro, primarily the U.S. dollar and Japanese yen. Fluctuations in the exchange rates of these currencies to the Euro had an effect on profitability in the 2006, 2007 and 2008 fiscal years.

Interest Rate Risk

We are exposed to interest rate risk through our debt instruments, fixed-term deposits and loans. During the 2003 fiscal year, we issued convertible subordinated notes and in the 2007 fiscal year we issued subordinated notes exchangeable for Qimonda shares. Due to the high volatility of our core business and to maintain high operational flexibility, we keep a substantial amount of cash and marketable securities. These assets are mainly invested in instruments with contractual maturities ranging from three to twelve months, bearing interest at short-term rates. To reduce the risk caused by changes in market interest rates, we attempt to align the duration of the interest rates of our debts and current assets by the use of interest rate derivatives.

Fluctuating interest rates have an impact on parts of each of our marketable securities, debt obligations and standby lines of credit. We make use of derivative instruments such as interest rate swaps to hedge against adverse interest rate developments. We have entered into interest rate swap agreements that primarily convert the fixed interest rate on our convertible subordinated notes to a variable interest rate based on the relevant European Interbank Offering Rate (EURIBOR).

Outlook

Industry Environment and Outlook

The current global financial crisis and general slow-down in the world economy has resulted in a number of major economies entering into recession. This drop in economic activity has significantly affected the global semiconductor market. For the 2009 calendar year, analysts expect a contraction of the market. WSTS, for example, currently forecasts that the overall market will decrease (in U.S. dollar terms) by 2.2 percent in the 2009 calendar year (compared with its spring 2008 forecast of 5.8 percent growth). In December 2008, Gartner Dataquest forecast a decrease in worldwide semiconductor revenues of 16 percent in the 2009 calendar year. For the 2008 calendar year, WSTS currently forecasts a growth of world semiconductor revenues of 2.5 percent, compared to 4.7 percent in its spring 2008 forecast. Overall, we believe that a significant decline in global semiconductor revenues from 2008 levels cannot be ruled out. In the 2010 calendar year, WSTS currently forecasts world semiconductor revenues growth of 6.5 percent.

In the 2009 calendar year, iSuppli expects all semiconductor market segments to be affected by the economic downturn. Personal computers (PC) and mobile phones will remain the most significant applications. So-called netbooks , which are small and low-cost portable computers, are expected to become a driver of growth in the PC market. Wireless infrastructure may be a driver in the wireless semiconductor market. In the automotive semiconductor market, safety applications, such as driver assistance and emergency calling, as well as energy-efficient and pollution-control systems, are expected to outperform the market. Similar trends are anticipated for renewable energy, energy-saving electric drives and medical in the industrial semiconductor market.

Outlook for Infineon Logic

Significant planning assumptions: When preparing this outlook, we made certain important planning assumptions for Infineon Logic.

Table of Contents

We implemented International Financial Reporting Standards (IFRS) as the primary accounting standards for Infineon effective October 1, 2008. While we are reporting our results for the 2008 fiscal year under United States Generally Accepted Accounting Standards (U.S. GAAP), the following outlook for the 2009 fiscal year is in accordance with IFRS. With the publication of the results for the first quarter of the 2009 fiscal year onwards, we will apply IFRS only. For ease of comparison, we will compare 2009 forecasts under IFRS to actual results in 2008 under IFRS.

As a result of the reclassification of Qimonda as discontinued operations effective March 31, 2008, all statements below reflect Infineon's continuing operations without Qimonda.

In addition, in line with our goal of increased efficiency, we reorganized the company along our target markets effective October 1, 2008. As a result, Infineon is organized in five operating segments: Automotive, Industrial & Multimarket, Chip Card & Security, Wireless Solutions, and Wireline Communications.

Furthermore, from October 1, 2008, our Management Board uses Segment Profit to assess the operating performance of our reportable segments and as a basis for allocating resources among our segments. We have defined Segment Profit as Operating Income (Loss) under IFRS, net of asset impairments, restructuring and other related closure costs, stock-based compensation expense, acquisition-related amortization and gains/losses, gains/losses on sales of assets, businesses, or interests in subsidiaries, and other income/expense, including litigation settlement costs. Gains/losses on sales of assets, businesses, or interests in subsidiaries include, among others, gains or losses that may be realized from potential sales of Qimonda shares or other investments and activities.

To address rising risks in the market environment of the 2008 fiscal year as well as adverse currency trends, we implemented our IFX10+ cost-reduction program in the third quarter of the 2008 fiscal year. Under IFRS, a total of 172 million in expenses related to this program were recorded in the fourth quarter of the 2008 fiscal year. Due to the dramatic weakening of the global market since August 2008, we have identified very substantial additional savings, primarily in operating expenses, in addition to the originally announced annualized savings of at least 200 million by the end of the 2009 fiscal year. These additional savings, however, are likely to be more than completely offset by the simultaneous decline in our revenue expectations versus our planning assumptions when IFX10+ was originally conceived, as well as the increase in idle cost caused by the drop in capacity utilization of our manufacturing sites. Moreover, we cannot rule out the possibility that we may incur additional expenses or record additional charges in the future in connection with this cost reduction program.

For the purpose of forecasting our total Segment Profit from continuing operations in the 2009 fiscal year, we assumed a U.S. dollar/Euro exchange rate of 1.40. About 50 percent of our revenues and 30 percent of the costs are exposed to the U.S. dollar. Any strengthening of the U.S. dollar against the Euro would have a positive impact on revenues, primarily in the segments with the largest exposure to the U.S. dollar, such as Industrial & Multimarket, Wireless Solutions and Wireline Communications. A strengthening of the U.S. dollar would not, however, have any material impact on earnings for the first half of the 2009 fiscal year, as we have already hedged a significant portion of the expected cash flow. For the remainder of the 2009 fiscal year, a strengthening of the U.S. dollar would have a material impact on earnings, as we have hedged only a small portion of the expected cash flows.

Infineon Logic's Revenues: For the 2009 fiscal year, visibility is very limited. We note that the weakness in the global economy is having a severe impact on demand in all of our target markets, leading to a decrease in revenues in all operating segments, with the least severe effect on the Wireless Solutions segment, in the 2009 fiscal year. Based on our current forecast, we expect total revenues for Infineon in the 2009 fiscal year, consisting of the operating segments Automotive, Industrial & Multimarket, Chip Card & Security, Wireless Solutions, and Wireline Communications, as well as Other Operating Segments and Corporate & Eliminations, to decrease by at least 15 percent compared to the 2008 fiscal year. The year-over-year decrease is expected to be driven in particular by the Automotive segment, where world wide production cuts at car manufacturers, are expected to last throughout the full 2009 fiscal year, are having a

severe impact on semiconductor demand. In addition, significant revenue decreases are anticipated in the Industrial & Multimarket, Chip Card & Security and Wireline Communications segments due to the general global weakening in demand. In the Industrial & Multimarket segment, an additional

Table of Contents

decrease in revenues is anticipated as a result of the disposal of the HDD business following its sale to LSI in the 2008 fiscal year. The Wireless Solutions segment is currently expected to be least severely affected by the revenue decrease in the 2009 fiscal year, due mainly to gains in market share.

Despite the down-turn of the worldwide economy, mentioned above, and the global recession, and despite the significant reduction in global semiconductor demand that has resulted from the global slow-down, we continue to see long-term growth in demand for our products beyond the expected decline, as our products address three current global issues: energy efficiency, communications, and security. We have organized our business around those growth drivers and expect added company value created by the products which address challenges linked to those trends. First, as natural resources become scarce, as costs of energy generation and consumption continue to rise, and as the awareness of environmental issues continues to increase, people and businesses are seeking to economize on energy usage. Our semiconductor solutions, particularly in the automotive and industrial businesses, enable improved energy efficiency. Second, people intensify communication and want flexible access to the internet in any place and at any time. We contribute to this trend through our products and solutions in the segments Wireless Solutions and Wireline Communications. Third, with increasing communication and people's need to access data securely anywhere and at any time, the need to protect data and intellectual property is growing. Likewise, the need to securely authenticate and identify users and travelers continues to grow. We cater to this trend in our Chip Card and Security activities.

Infineon Logic's Total Segment Profit: Under IFRS, Infineon Logic EBIT in the 2008 fiscal year was negative 52 million. Under IFRS, this translates into a total Segment Profit of 258 million. In the 2009 fiscal year, we expect Infineon total Segment Profit to decrease significantly compared to the total Segment Profit of 258 million under IFRS for the 2008 fiscal year and we expect negative total Segment Profit. The decline in Segment Profit expected for the 2009 fiscal year is anticipated to be caused principally by sharp revenue decreases in combination with idle capacity costs caused by ongoing low capacity utilization. This decline will be offset only in part by savings in connection with the IFX10+ cost-reduction program. Beyond the 2009 fiscal year, we expect that any increase in revenues from continuing operations would also lead to increased total Segment Profit for Infineon's continuing operations.

Fixed assets investment and depreciation for Infineon Logic: We are pursuing a differentiated manufacturing strategy for our five operating segments. In the context of this strategy, we will continue to invest in manufacturing capacities for special processes, particularly in the power semiconductor arena. In contrast, we do not plan to invest in our own manufacturing capacities starting with 65-nanometer structure sizes for the standard semiconductor manufacturing process, so called CMOS technology. We anticipate that our annual investment in property, plant and equipment and intangible assets including capitalized development costs, will fall to approximately 250 million in the 2009 fiscal year. This compares to an investment in property, plant and equipment and intangible assets including capitalized development costs of 370 million in the 2008 fiscal year as recorded under IFRS. In the 2009 fiscal year, depreciation expense is expected to total around 400 million and additional amortization of intangible assets, including capitalized development costs, will be around 50 million, compared to 496 million and 75 million in the prior year, respectively, as recorded under IFRS. In subsequent fiscal years, we will tailor our capital investment to the demand development, but expect to limit such investments to 10 percent or less of our revenues. We expect annual depreciation and amortization expense, including amortization charges for capitalized development costs under IFRS, to decrease further and to fall in line with our capital investment.

Expenditures for research & development for Infineon Logic: We expect expenditures for Research and Development (R&D) for Infineon Logic in the 2009 fiscal year to decrease by around 10 percent compared to the 2008 fiscal year and as recorded under IFRS, mainly due to the cost reduction measures in connection with the IFX10+ program.

In the Automotive segment, our R&D efforts are mainly focused on the technology development of analog, bipolar, and flash products, as well as new products, and the widening of the existing product portfolio. The development of new power technologies for industrial drives and power supply application and the widening of the product portfolio,

particularly in power conversion ICs and industrial ASICs, are examples of areas of emphasis within R&D in the Industrial & Multimarket segment. In the Chip Card & Security

Table of Contents

segment, we have intensified our R&D efforts in developing next-generation, highly secure technologies and platforms being used in many fields of application. In the Wireless Solutions and Wireline Communications segments, our R&D spending is focused, for example, on developing next-generation system-on-a-chip products and system solutions for mobile phones and the broadband access market. Another important focus of our R&D activities is process technologies that we develop in alliances with several partners and consortia in order to maintain a competitive technology roadmap at an affordable cost level.

Recent Developments Related to Qimonda

On December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. The package includes a 150 million loan from the German Free State of Saxony, a 100 million loan from a state bank in Portugal and a 75 million loan from us. In addition to this financing package, Qimonda has announced that it expects to receive guarantees totaling 280 million from the Federal Government of Germany and the Free State of Saxony. Based on such guarantees, Qimonda has announced that it is already in advanced negotiations regarding the financing of 150 million. The availability of the total financing package is contingent upon successful completion of the relevant state, federal and European Commission approval procedures as well as final agreement on the detailed terms and conditions of the transaction.

In the context of the extraordinary circumstances currently confronting the world economy in general and the semiconductor industry in particular, we and Qimonda have found it necessary to explore a wider range of financing alternatives. Given the conditions of the equity markets and the trading price of Qimonda's ADSs, as well as the severe credit crisis, Qimonda's opportunities to obtain further funding have been extremely limited. We and Qimonda have determined that accepting the offer of funding from the German Free State of Saxony and from a state bank in Portugal is the only realistic current alternative that will permit Qimonda to receive necessary financial resources. The government entities participating in this transaction have required that we also make funding available to Qimonda as a condition to their participation. In light of the severe negative consequences of an insolvency of Qimonda to that company and its employees, as well as Infineon's potential exposure to certain significant liabilities related to the Qimonda business, we believe that the provision of this funding by us at this time is in the best interest of Infineon and its shareholders.

Subsequent Events

Various Matters

Subsequent to September 30, 2008, we repurchased notional amounts of 95 million and 22 million of our exchangeable subordinated notes due 2010 and our convertible subordinated notes due 2010, respectively. The repurchases were made out of available cash.

Effective October 1, 2008, we are organized into the following five operating segments: Automotive, Chip Card & Security, Industrial & Multimarket, Wireline Communications and Wireless Solutions.

On October 3, 2008, approximately 95 California schools, political subdivisions and public agencies that were previously putative class members of the multistate attorney general complaint described in note 34 to our consolidated financial statements filed suit in California Superior Court against us, Infineon Technologies North America, and several other DRAM manufacturers alleging DRAM price-fixing and artificial price inflation in violation of California state antitrust and consumer protection laws arising out of the alleged practices described in note 34. The plaintiffs seek recovery of actual and treble damages in unspecified amounts, restitution, costs (including attorneys' fees) and injunctive and other equitable relief. We and Infineon Technologies North America have agreed to accept service of process as of November 19, 2008 in exchange for an extended period of time to respond to the

complaint. The current response date is February 12, 2009.

On October 7, 2008, we and Third Dimension Semiconductor Inc. signed a Settlement and License Agreement and on October 21, 2008, filed a joint motion to dismiss the patent infringement case brought against us.

Table of Contents

On October 13, 2008, Qimonda announced that it had entered into a share purchase agreement to sell its 35.6 percent stake in Inotera Memories, Inc., to Micron Technology, Inc., for cash proceeds of \$400 million. The sale of the Inotera stake occurred in two equal tranches, on October 20, 2008 and November 26, 2008.

In the litigation led by LSI (see note 34), the court in the Eastern District of Texas stayed the case on June 20, 2008, while the ITC Case is pending. On October 17, 2008, Qimonda became a party to the ITC Case.

On October 21, 2008, we learned that the European Commission had commenced an investigation involving our Chip Card & Security segment for alleged violations of antitrust laws. The investigation is in its very early stages, and we are assessing the facts and monitoring the situation carefully.

On October 30, 2008, the district court in the MDL proceedings entered an order staying the indirect purchaser proceedings in the Northern District of California during the period that the Ninth Circuit Court of Appeals considers the appeal on the decision of the district court to dismiss certain claims of the plaintiffs.

On November 12, 2008, Volterra Semiconductor Corporation filed suit against Primarion, Inc., Infineon Technologies North America and Infineon Technologies AG in the United States District Court for the Northern District of California for alleged infringement of five U.S. patents by certain products offered by Primarion.

On November 25, 2008, Infineon Technologies AG, Infineon Technologies Austria AG and Infineon Technologies North America filed suit in the United States District Court for the District of Delaware against Fairchild Semiconductor International, Inc. and Fairchild Semiconductor Corporation (collectively Fairchild) regarding (1) a complaint for patent infringement by certain products of Fairchild and (2) a complaint for declaratory judgment of non-infringement and invalidity of certain patents of Fairchild against the allegation of infringement of those patents by certain products of Infineon. Fairchild has filed a counterclaim in Delaware for a declaratory judgment on (1) infringement by Infineon of those patents which are the subject of Infineon's complaint for declaratory judgment and (2) non-infringement and invalidity of those patents which are the subject of Infineon's complaint for infringement. Fairchild has further filed another patent infringement suit against Infineon Technologies AG and Infineon Technologies North America in the United States District Court for the District of Maine alleging that certain products of Infineon infringe on two other patents of Fairchild which are not part of the Delaware lawsuit.

On December 5, 2008, we received a request for information from the European Commission regarding DRAM turnover data for our 2001 fiscal year.

Qimonda

On December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. This proposed transaction is described under Operating and Financial Review Recent Developments Related to Qimonda .

Table of Contents

RISK FACTORS

You should carefully consider the risks described below before making an investment decision. The occurrence of any of the following events could harm us. If these events occur, the trading price of our company's shares could decline, and you may lose all or part of your investment. Additional risks not currently known to us or that we now deem immaterial may also harm us and affect your investment.

Risks related to the semiconductor industry

Ongoing financial market volatility and further adverse developments in the global economic environment could have a significant adverse impact on our business, financial condition and operating results.

Our business, financial condition and results of operations could be significantly negatively impacted by general economic conditions and the related downturn in the semiconductor market. In recent months, the global economy has experienced a significant downturn, reflecting the effects of the credit market crisis, slower economic activity and a generally negative economic outlook, a decrease in consumer and business confidence and liquidity concerns. A severe or prolonged economic downturn could result in a variety of risks to our business, including:

significant declines in sales;

significant reductions in selling prices;

increased volatility and/or declines in our share price;

increased volatility or adverse movements in foreign currency exchange rates;

delays in, or curtailment of, purchasing decisions by our customers or potential customers either as a result of overall economic uncertainty or as a result of their inability to access the liquidity necessary to engage in purchasing initiatives or new product development;

increased credit risk associated with our customers or potential customers, particularly those that may operate in industries most affected by the economic downturn, such as automotives; and

impairment of goodwill or other assets.

To the extent that the current economic downturn worsens or is prolonged, our business, financial condition and results of operations could be significantly and adversely affected.

The semiconductor industry is characterized by intense competition, which could reduce our sales or put continued pressure on our prices.

The semiconductor industry is highly competitive, and has been characterized by rapid technological change, short product lifecycles, high capital expenditures, intense pricing pressure from major customers, periods of oversupply and continuous advancements in process technologies and manufacturing facilities. Increased competitive pressure or the relative weakening of our competitive position could materially and adversely affect our business, financial condition and results of operations.

We operate in a highly cyclical industry and our business could suffer from periodic downturns.

The semiconductor industry is highly cyclical and has suffered significant economic downturns at various times. These downturns have involved periods of production overcapacity, oversupply, lower prices and lower revenues. The markets for memory products have been especially volatile. In addition, average selling prices for our products, particularly Qimonda's standard memory products, can fluctuate significantly from quarter to quarter or month to month.

There can be no assurance that the market will continue to grow in the near term, that the growth rates experienced in recent past periods will be attainable again in the coming years, or that we will be successful in managing any future downturn or substantial decline in average selling prices, any of which could have a material adverse effect on our results of operations and financial condition.

Table of Contents

Industry overcapacity could require us or Qimonda to lower our prices, particularly for Qimonda's memory products.

Both semiconductor companies with their own manufacturing facilities and semiconductor foundries, which manufacture semiconductors designed by others, have added significant capacity from time to time in recent periods. In the past, the net increases of supply sometimes exceeded demand requirements, leading to oversupply situations and downturns in the industry.

Downturns have severely hurt the profitability of the industry in general, especially the DRAM business of Qimonda. Given the volatility and competition of the semiconductor industry, we are likely to face downturns in the future as well, which would likely have similar effects. Fluctuations in the rate at which industry capacity grows relative to the growth rate in demand for semiconductor products may in the future put pressure on our average selling prices and hurt our results of operations.

Our business could suffer as a result of volatility in different parts of the world.

We operate globally, with numerous manufacturing, assembly and testing facilities on three continents, including those that we operate jointly with partners. In the 2008 fiscal year, 78.6 percent of our revenues were generated outside Germany and 59.7 percent were generated outside Europe. Our business is therefore subject to risks involved in international business, including:

negative economic developments in foreign economies and instability of foreign governments, including the threat of war, terrorist attacks, epidemic or civil unrest;

changes in laws and policies affecting trade and investment; and

varying practices of the regulatory, tax, judicial and administrative bodies in the jurisdictions where we operate.

Substantial changes in any of these conditions could have an adverse effect on our business and results of operations. Our results of operations could also be hurt if demand for the products made by our customers decreases due to adverse economic conditions in any of the regions where they sell their own products.

Threats of disease outbreaks or pandemics, such as the avian flu and Severe Acute Respiratory Syndrome (SARS) outbreaks, in regions where we have manufacturing sites may negatively effect our operations by limiting the productivity of our workforce, inhibiting transportation or the shipment of products or reducing the ability of local suppliers to provide adequate goods and services. Furthermore, the purchasing patterns of our customers located in these regions may suffer if there is an epidemic outbreak. This could negatively impact our operations.

In difficult market conditions, our high fixed costs adversely impact our results.

In less favorable industry conditions, in addition to price pressure we are faced with a decline in the utilization rates of our manufacturing facilities due to decreases in product demand. Since the semiconductor industry is characterized by high fixed costs, we are not always able to reduce our total costs in line with revenue declines. The costs associated with the excess capacity, particularly for our front-end fabs, are charged directly to cost of sales as idle capacity charges. We cannot guarantee that difficult market conditions will not adversely affect the capacity utilization of our fabs and, consequently, our future gross margins.

The competitive environment of the semiconductor industry has led to industry consolidation, and we may face even more intense competition from newly merged competitors or we may seek to acquire a competitor or become an acquisition target.

The highly competitive environment of the semiconductor industry and the high costs associated with manufacturing technologies and developing marketable products have resulted in significant consolidation in the industry and is likely to lead to further consolidation in the future. Such consolidation can allow a company to further benefit from economies of scale, provide improved or more comprehensive product portfolios and increase the size of its serviceable market. Consequently, we may seek to acquire or merge with a competitor to improve our market position and the applications and products we can market. We also

Table of Contents

may become a target for a company looking to improve its competitive position. Such an occurrence may take place at any time with consequences that may not be predictable and which could have a materially adverse effect on our results of operations and financial condition or which may otherwise fail to achieve the positive results we anticipate. Even if we do not enter into a merger or acquisition transaction, our competitive position may be adversely impacted by consolidation among other industry participants, who may leverage increased market share and economies of scale to improve their competitive position.

Risks related to our operations

We intend to engage in acquisitions, joint ventures and other transactions that may complement or expand our business. We may not be able to complete these transactions, and even if executed, these transactions pose significant risks and could have a negative effect on our operations.

Our future success may be dependent on opportunities to enter into joint ventures and to buy other businesses or technologies that could complement, enhance or expand our current business or products or that might otherwise offer us growth opportunities or gains in productivity. If we are unable to identify suitable targets, our growth prospects may suffer, and we may not be able to realize sufficient scale advantages to compete effectively in all relevant markets. We may also face competition for desirable targets from other companies in the semiconductor industry. Our ability to acquire targets may also be limited by applicable antitrust laws and other regulations in the United States, the European Union and other jurisdictions in which we do business. We may not be able to complete such transactions, for reasons including, but not limited to, a failure to secure financing or as a result of restrictive covenants in our debt instruments. Any transactions that we are able to identify and complete may involve a number of risks, including:

the diversion of our management's attention from our existing business to integrate the operations and personnel of the acquired or combined business or joint venture;

possible negative impacts on our operating results during the integration process; and

our possible inability to achieve the intended objectives of the transaction.

We may be unable to successfully integrate businesses we acquire, and may be required to record charges related to the goodwill or other long-term assets associated with the acquired businesses.

We have acquired other companies, businesses and technologies from time to time. We intend to continue to make acquisitions of, and investments in, other companies. We face risks resulting from the expansion of our operations through acquisitions, including the risk that we might be unable to successfully integrate new businesses or teams with our culture and strategies on a timely basis or at all. We also cannot be certain that we will be able to achieve the full scope of the benefits we expect from a particular acquisition or investment. Our business, financial condition and results of operations may suffer if we fail to coordinate our resources effectively to manage both our existing businesses and any businesses we acquire.

We review the goodwill associated with our acquisitions for impairment at least once a year. Changes in our expectations due to changes in market developments which we cannot foresee have in the past resulted in our writing off amounts associated with the goodwill of acquired companies, and future changes may require similar further write-offs in future periods.

We may not be able to protect our proprietary intellectual property and may be accused of infringing the intellectual property rights of others.

Our success depends on our ability to obtain patents, licenses and other intellectual property rights covering our products and our design and manufacturing processes. The process of seeking patent protection can be long and expensive. Patents may not be granted on currently pending or future applications or may not be of sufficient scope or strength to provide us with meaningful protection or commercial advantage. In addition, effective copyright and trade secret protection may be unavailable or

Table of Contents

limited in some countries, and our trade secrets may be vulnerable to disclosure or misappropriation by employees, contractors and other persons.

Competitors may also develop technologies that are protected by patents and other intellectual property rights. These technologies may therefore either be unavailable to us or be made available to us only on unfavorable terms and conditions. Litigation, which could require significant financial and management resources, may be necessary to enforce our patents or other intellectual property rights or to defend against claims of infringement of intellectual property rights brought against us by others. Lawsuits may have a material adverse effect on our business. We may be forced to stop producing substantially all or some of our products or to license the underlying technology upon economically unfavorable terms and conditions or we may be required to pay damages for the prior use of third party intellectual property. See [Business](#) [Legal Matters](#) for a description of current claims and proceedings.

Our results may suffer if we are not able to match our production capacity to demand.

It is difficult to predict growth in the markets we serve, making it hard to estimate requirements for production capacity. If the market does not grow as we have anticipated, we risk underutilization of our facilities. This may also result in future write-offs of inventories and losses on products for which demand is lower than current forecasts may indicate, and potentially require us to undertake restructuring activities that may involve significant charges to our earnings.

During periods of increased demand we may not have sufficient capacity to meet customer orders. Such constraints affect our customers' ability to deliver products in accordance with their planned manufacturing schedules, straining relationships with affected customers. During periods of industry overcapacity and declining selling prices, customers do not generally order products as far in advance of the scheduled shipment date as they do during periods when our industry is operating closer to capacity.

In the past we have responded to fluctuations in industry capacity and demand by adapting production levels, closing existing production facilities, opening new production facilities or entering into strategic alliances, which in many cases resulted in significant expenditures. We have also purchased an increasing number of processed wafers and packages from semiconductor foundries and subcontractors to meet higher levels of demand and have incurred higher cost of goods sold as a result. In order to expand or reduce our production capacity in the future, we may have to spend substantial amounts, which could hurt our results of operations.

Our business could suffer due to decreases in the volume of demand of our customers.

Our sales volume depends significantly on the market success of our customers in developing and selling end-products that incorporate our products. The fast pace of technological change, difficulties in the execution of individual projects, general economic conditions and other factors may limit the market success of our customers, resulting in a decrease in the volume of demand for our products and adversely affecting our results of operations. This risk is particularly acute in our communications business, in which we also face significant pricing and margin pressures.

Due to the time needed to develop the final product for end customers and the ultimate market introduction, we may face significant and sometimes unpredictable delays between the implementation of our products and volume ramp up. This may cause significant idle capacity costs.

The loss of one or more of our key customers may adversely affect our business.

Historically, a significant portion of our revenue has come from a relatively small number of customers and distributors. The loss or financial failure of any significant customer or distributor, or any reduction in orders by any of our key customers or distributors could materially and adversely affect our business.

Fluctuations in the mix of products sold may adversely affect our financial results.

We achieve differing gross margins across our wide range of products. Our financial results therefore depend in part on the structure of our product portfolio. Fluctuations in the mix and types of our products may also affect the extent to which we are able to recover our fixed costs and investments that are associated with a particular product, and as a result can negatively impact our financial results.

Table of Contents

If we fail to successfully implement an optimum make-or-buy strategy, our business could suffer from higher costs.

We intend to continue to invest in leading-edge process technologies such as power, embedded flash and RF technologies. At the same time, for CMOS below 90-nanometers, we will continue to share risks and expand our access to leading-edge technology through long-term strategic partnerships with other leading industry participants and by making more extensive use of manufacturing at silicon foundries. However, the decision to develop our own solutions or to cooperate with third party suppliers could result in disadvantages if we fail to achieve sufficient volume production or if market conditions for the services we obtain from foundries become more expensive due to increases in worldwide demand for foundry services.

Our business could suffer from problems with manufacturing.

The semiconductor industry is characterized by the introduction of new or enhanced products with short life cycles in a rapidly changing technological environment. We manufacture our products using processes that are highly complex, require advanced and costly equipment and must continuously be modified to improve yields and performance. Difficulties in the manufacturing process can reduce yields or interrupt production, especially during rapid ramp up periods, and as a result of such problems we may on occasion not be able to deliver products on time or in a cost-effective, competitive manner.

We cannot foresee and prepare for every contingency. If production at a fabrication facility is interrupted, we may not be able to shift production to other facilities on a timely basis or customers may purchase products from other suppliers. In either case, the loss of revenues and damage to the relationship with our customers could be significant. Increasing our production capacity to reduce our exposure to potential production interruptions would increase our fixed costs. If the demand for our products does not increase proportionally to the increase in production capacity, our operating results could be harmed.

If our outside foundry suppliers fail to meet our expectations, our results of operations and our ability to exploit growth opportunities could be adversely affected.

We outsource production of some of our products to third-party suppliers, including semiconductor foundry manufacturers and assembly and test facilities, and expect that our reliance on outsourcing will increase. If our outside suppliers are unable to satisfy our demand, or experience manufacturing difficulties, delays or reduced yields, our results of operations and ability to satisfy customer demand could suffer. In addition, purchasing rather than manufacturing these products may adversely affect our gross profit margin if the purchase costs of these products are higher than our own manufacturing costs. Our internal manufacturing costs include depreciation and other fixed costs, while costs for products outsourced are based in large part on market conditions. Prices for foundry products also vary depending on capacity utilization rates at our suppliers, quantities demanded, product technology and geometry. Furthermore, these outsourcing costs can vary materially from quarter to quarter and, in cases of industry shortages, they can increase significantly, negatively impacting our results of operations.

Products that do not meet customer specifications or that contain, or are perceived to contain, defects or errors or that are otherwise incompatible with their intended end use could impose significant costs on us.

The design and production processes for our products are highly complex. It is possible that we may produce products that do not meet customer specifications, contain or are perceived to contain defects or errors, or are otherwise incompatible with their intended uses. We may incur substantial costs in remedying such defects or errors, which could include material inventory write-downs. Moreover, if actual or perceived problems with nonconforming, defective or incompatible products occur after we have shipped the products, we might not only bear direct liability for providing replacements or otherwise compensating customers but could also suffer from long-term damage to our

relationship with important customers or to our reputation in the industry generally. This could have a material adverse effect on our business, financial condition and results of operations.

Table of Contents

We are subject to the risk of property loss and business interruption.

We may experience property loss or damage or interruptions to our business; including as a result of fire, natural disasters or other disturbance at our facilities or those of our customers or suppliers. We have constructed and operate our facilities in ways that are designed to minimize these risks and to enable a fast return to operations if such an event should occur. We continue to invest in prevention and response measures at our facilities as well as in our supplier relations, and carry insurance in amounts that we believe are adequate. Any such events, however, could have a material adverse affect on our operations or financial results, and any losses may exceed the amounts recoverable under our insurance policies.

Our business could suffer if we are not able to secure the development of new technologies or if we cannot keep pace with the technology development of our competition.

The semiconductor industry is characterized by rapid technological changes. New process technologies using smaller feature sizes and offering better performance characteristics are introduced every one to two years. The introduction of new technologies allows us to increase the functions per chip while at the same time optimizing performance parameters, such as decreasing power consumption or increasing processing speed. In addition, the reduction of feature sizes allows us to produce smaller chips offering the same functionality and thereby considerably reduce the costs per function. In order to remain competitive, it is essential that we secure the capabilities to develop and qualify new technologies for the manufacturing of new products. If we are unable to develop and qualify new technologies and products, or if we devote resources to the pursuit of technologies or products that fail to be accepted in the marketplace or that fail to be commercially viable, our business may suffer.

We rely on our strategic partners and other third parties, and our business could be harmed if they fail to perform as expected or relationships with them were to be terminated.

As part of our strategy, we have entered into a number of long-term strategic alliances with leading industry participants, both to manufacture semiconductors and to develop new manufacturing process technologies and products. If our strategic partners encounter financial difficulty or change their business strategies, they may no longer be able or willing to participate in these alliances. Some of the agreements governing our strategic alliances allow our partners to terminate the agreement if our equity ownership changes so that a third party gains control of our company or of a significant portion of our company's shares. Our business could be harmed if any of our strategic partners were to discontinue its participation in a strategic alliance or if the alliance were otherwise to terminate. To the extent we rely on alliances and third-party design and/or manufacturing relationships, we face the risks of:

reduced control over delivery schedules and product costs;

manufacturing costs that are higher than anticipated;

the inability of our manufacturing partners to develop manufacturing methods appropriate for our products and their unwillingness to devote adequate capacity to produce our products;

a decline in product reliability;

an inability to maintain continuing relationships with our suppliers; and

limited ability to meet customer demand when faced with product shortages.

If any of these risks materialize, we could experience an interruption in our supply chain or an increase in costs, which could delay or decrease our revenues or adversely affect our business, financial condition and results of operations.

Table of Contents

New business is often subject to a competitive selection process that can be lengthy and uncertain and that requires us to incur significant expenses in advance. Even if we win and begin a product design, a customer may decide to cancel or change its product plans, which could cause us to generate no sales from a product and adversely affect our results of operations.

In several of our business areas we focus on winning competitive bid selection processes, known as design wins, to develop products for use in our customers' products. These selection processes can be lengthy and can require us to incur significant design and development expenditures. We may not win the competitive selection process and may never generate any revenues despite incurring significant design and development expenditures.

If we win a product design and receive corresponding orders from our customers, we may experience delays in generating revenues from our products as a result of the lengthy development and design cycle. In addition, a delay or cancellation of a customer's plans could significantly adversely affect our financial results, as we may have incurred significant expenses and generated no revenues. Finally, if our customers fail to successfully market and sell their products our results of operations could be materially adversely affected as the demand for our products falls.

We rely on a limited number of suppliers of manufacturing equipment and materials, and we could suffer shortages if they were to interrupt supply or increase prices.

Our manufacturing operations depend upon obtaining deliveries of equipment and adequate supplies of materials on a timely basis. We purchase equipment and materials from a number of suppliers on a just-in-time basis. From time to time, suppliers may extend lead times, limit supply to us or increase prices due to capacity constraints or other factors. Because the equipment that we purchase is complex, it is difficult for us to substitute one supplier for another or one piece of equipment for another. Some materials are only available from a limited number of suppliers. Although we believe that supplies of the materials we use are currently adequate, shortages could occur in critical materials, such as silicon wafers or specialized chemicals used in production, due to interruption of supply or increased industry demand. Our results of operations would be hurt if we were not able to obtain adequate supplies of quality equipment or materials in a timely manner or if there were significant increases in the costs of equipment or materials.

We may be adversely affected by rising raw material prices.

We are exposed to fluctuations in raw material prices. In the recent past, gold, copper and petroleum-based organic polymer prices in particular have increased on a worldwide basis. If we are not able to compensate for or pass on our increased costs to customers, such price increases could have a material adverse impact on our financial results.

Our business could suffer if we are unable to secure dependable power supplies at reasonable cost.

Our business requires reliable electrical power at reasonable cost, and may be adversely affected by power shortages due to disruptions in supply, as well as increases in market prices for fuel or electricity.

Our operations rely on complex information technology systems and networks, and any disruptions in such systems or networks could have a material adverse impact on our business and results of operations.

Like other globally operating technology companies, we rely heavily on information technology systems and networks to support business processes as well as internal and external communications. These systems and networks are potentially vulnerable to damage or interruption from a variety of sources. We have implemented numerous measures in order to manage our risks related to system and network disruptions, including the use of multiple suppliers and sophisticated information technology security to protect highly confidential information. However, despite such precautions, an extended outage in a telecommunications network utilized by our systems or a similar event could lead

to an extended

Table of Contents

unanticipated interruption of our systems or networks, which could have an adverse effect on our business. Furthermore, any data leaks resulting from information technology security breaches could adversely affect our business operations or reputation.

If we are unsuccessful in implementing our strategic restructuring plans, our revenue and profitability may be adversely affected.

Our future success and financial performance are largely dependent on our ability to successfully implement our business strategy and to achieve sustained profitability. In furtherance of our overall strategy, we have announced plans to restructure our operations to improve our focus on our core business. Those restructuring plans include anticipated further acquisitions of complementary businesses and assets and sales of non-core businesses and assets. Any failure to execute our strategy successfully, including a failure to consummate such acquisitions or dispositions, could have material adverse effect on our operations or financial performance.

We have recorded significant reorganization costs and asset impairment charges in the past and may do so again in the future, which could materially adversely affect our business.

In the past we have recorded restructuring and asset impairment charges relating to our efforts to consolidate and refocus our business. As we respond to continuing rapid change in the semiconductor industry in order to remain competitive, we may incur additional employee termination and asset impairment charges in the future. Such charges may have a material adverse effect on our business, financial condition and results of operations.

Our success depends on our ability to recruit and retain a sufficient number of qualified key personnel.

Our success depends significantly on the recruitment and retention of highly skilled personnel, particularly in the areas of research and development, marketing, production management and general management. The competition for such highly skilled employees is intense and the loss of the services of key personnel without adequate replacement or the inability to attract new qualified personnel could have a material adverse effect on us. We can provide no assurance that we will be able to successfully retain and/or recruit the key personnel we require.

Our business could suffer if we do not have adequate access to capital.

Although we seek to make optimal use of third-party foundries when appropriate, we require significant amounts of capital to maintain, modernize, expand and build our own facilities. Likewise, we increasingly require significant amounts of capital to fund research and development and advance product platform development.

We used cash in our investing activities of 853 million in the 2006 fiscal year, 867 million in the 2007 fiscal year and 616 million in the 2008 fiscal year. Our research and development expenses were 816 million in the 2006 fiscal year, 768 million in the 2007 fiscal year and 755 million in the 2008 fiscal year. Our capital expenditures in the 2006, 2007 and 2008 fiscal years were 640 million, 498 million and 312 million, respectively. We intend to continue to invest in research and development and manufacturing facilities, while continuing our policy of cooperation with other semiconductor companies to share these costs with us.

In June 2003, we issued 700 million in convertible subordinated notes due 2010, and in September 2007, we issued 215 million in exchangeable subordinated notes due 2010. The convertible notes are convertible into ordinary shares of our company at a conversion price of 10.23 per share. The exchangeable notes are exchangeable into Qimonda ADSs at an exchange price of 10.48 per Qimonda ADS. Given the recent trading price of our ordinary shares and Qimonda ADSs, it is unlikely that a noteholder would convert or exchange its notes for our ordinary shares or Qimonda ADSs, as applicable. Therefore, we may be required to find an alternative source of funds, to repay the

outstanding principal and accrued interest on the convertible and exchangeable notes in June and August 2010, respectively.

Table of Contents

To the extent that cash from operations is not sufficient to meet our investment and debt repayment needs, we may need to access the equity or debt markets or tap bank credit lines from time to time in the future. We can provide no assurance that we will generate adequate cash from operations or that we will be able to access the financial markets or commercial lending markets as and when needed on favorable terms, or at all. Our ability to access the financial and commercial lending markets, and the terms of any debt or equity financings, will be affected by factors outside our control including general economic and market conditions. A prolonged state of adverse market conditions and the banking crisis may block or limit our access to the capital and debt markets and impair the ability of banks to provide new credit financing and/or honor their lending commitments to us. In addition, the trading price of our shares on the Frankfurt Stock Exchange has recently fallen below €2 per share, which is the nominal value of each of our shares. Generally, we cannot sell shares at a price per share below nominal value. Therefore, for so long as the trading price of our shares remains below €2 per share, we are generally unable to raise capital by issuing new shares, which significantly decreases our ability to raise capital. Inadequate liquidity could materially adversely affect our business, financial condition and results of operations.

Because our ability to raise cash on the financial and commercial lending markets may be limited, we may be required to sell assets to raise cash in order to repay our convertible notes due in June 2010 and our exchangeable notes due in August 2010. Such a sale may involve selling assets that we would not otherwise sell, including assets that we believe are strategically important to develop and implement our business plan, or selling assets at below-market prices. Moreover, there is no guarantee that the proceeds of any asset sales would be sufficient for us to meet our obligations. The failure to meet our obligations under the notes or any of our credit lines, or the required sale of any of our assets, will likely have a material adverse effect on our business, operations and financial condition.

Reductions in the amount of government subsidies we receive or demands for repayment could increase our reported expenses or limit our ability to fund our capital expenditures.

As is the case with many other semiconductor companies, our reported expenses have been reduced in recent years by various subsidies received from governmental entities. In particular, we have received, and expect to continue to receive, subsidies for investment projects as well as for research and development projects. We recognized governmental subsidies as a reduction of R&D expenses and cost of sales in an aggregate amount of €54 million in the 2006 fiscal year, €122 million in the 2007 fiscal year and €88 million in the 2008 fiscal year.

As the general availability of government funding is outside our control, we cannot assure you that we will continue to benefit from such support, that sufficient alternative funding would be available if necessary or that any such alternative funding would be provided on terms as favorable to us as those we currently receive.

The application for and implementation of such subsidies often involves compliance with extensive regulatory requirements, including, in the case of subsidies to be granted within the European Union, notification to the European Commission of the contemplated grant prior to disbursement. In particular, establishment of compliance with project-related ceilings on aggregate subsidies defined under European Union law often involves highly complex economic evaluations. If we fail to meet applicable requirements, we may not be able to receive the relevant subsidies or may be obliged to repay them, which could have a material adverse effect on our business.

The terms of certain of the subsidies we have received impose conditions that may limit our flexibility to utilize the subsidized facility as we deem appropriate, to divert equipment to other facilities, to reduce employment at the site, or to use related intellectual property outside the European Union. This could impair our ability to operate our business in the manner we believe to be most cost effective.

Table of Contents

Our operating results may fluctuate significantly from quarter to quarter, and as a result we may fail to meet the expectations of securities analysts and investors, which could cause our stock price to decline.

Our operating results have fluctuated significantly from quarter to quarter in the past and are likely to continue to do so due to a number of factors, many of which are not within our control. If our operating results do not meet the expectations of securities analysts or investors, the market price of our ordinary shares and ADSs will likely decline. Our reported results can be affected by numerous factors including those described in this Risk Factors section, among them:

the overall cyclical nature of, and changing economic and market conditions in, the semiconductor industry, as well as seasonality in sales of consumer products in which our products are incorporated;

our ability to scale our operations in response to changes in demand for our existing products and services or demand for new products requested by our customers;

intellectual property disputes, customer indemnification claims and other types of litigation risks;

the gain or loss of a key customer, design win or order;

the timing, rescheduling or cancellation of significant customer orders and our ability, as well as the ability of our customers, to manage inventory;

additional changes in accounting rules, such as the change requiring the recording of expenses for employee shares options and other stock-based compensation expense, which commenced in the 2006 fiscal year, and

adverse developments with respect to Qimonda.

Due to the foregoing factors, and the other risks discussed in this annual report, you should not rely on quarter-to-quarter comparisons of our operating results as an indicator of future performance.

Removal of our shares from the DAX 30 or the Philadelphia Stock Exchange Semiconductor Sector Index could cause the market price of our securities to drop significantly.

Our shares have been included in the DAX 30 since June 2000 and in the Philadelphia Stock Exchange Semiconductor Index (SOX) since December 2004. The DAX 30 is a market-capitalization weighted index and the SOX is a price-weighted index. Our shares could be removed from the DAX 30 or the SOX if our shares were to trade below a certain price for a sustained period of time. Certain investors will only invest funds in companies that are included in one of these indexes. Any such removal or the announcement thereof could cause the market price of our shares to drop significantly.

Our results of operations and financial condition can be adversely impacted by changes in exchange rates.

Our results of operations can be hurt by changes in exchange rates, particularly between the Euro and the U.S. dollar or the Japanese yen. In addition, the balance sheet impact of currency translation adjustments has been, and may continue to be, material. Further information on foreign currency derivative and transaction gains and losses can be found in the section headed Operating and Financial Review Qualitative and Quantitative Disclosure about Market Risk Foreign Exchange and Interest Risk .

If we fail to maintain effective internal controls, we may not be able to report financial results accurately or on a timely basis, or to detect fraud, which could have a material adverse effect on our business or share price.

Effective internal controls are necessary for us to provide reasonable assurance with respect to our financial reports and to effectively prevent financial fraud. Pursuant to the Sarbanes-Oxley Act, we are required to periodically evaluate the effectiveness of the design and operation of our internal controls. Internal control over financial reporting may not prevent or detect misstatements because of inherent limitations, including the possibility of human error or collusion, the circumvention or overriding of controls,

Table of Contents

or fraud. If we fail to maintain an effective system of internal controls, our business and operating results could be harmed, and we could fail to meet our reporting obligations, which could have a material adverse effect on our business and the share price.

Changes in tax regulations could result in lower earnings and cash flows.

We operate in numerous countries throughout the world, and therefore are subject to numerous tax regimes. Changes in tax regulations in any applicable jurisdiction could result in higher tax expenses and payments, and could adversely impact our tax liabilities and deferred tax assets.

Environmental laws and regulations may expose us to liability and increase our costs.

Our operations are subject to many environmental laws and regulations wherever we operate governing, among other things, air emissions, wastewater discharges, the use and handling of hazardous substances, waste disposal and the investigation and remediation of soil and ground water contamination.

A number of environmental requirements in the European Union, including some that have only recently come into force, affect our business. These requirements include:

- a directive that imposes a take-back obligation on manufacturers to finance the collection, recovery and disposal of electrical and electronic equipment. Because of unclear statutory definitions and interpretations in individual member states, we are unable at this time to determine in detail the consequences of this directive for us.

- an European legislation that restricts the use of lead and other hazardous substances in electrical and electronic equipment.

- Directive, that restricts the use of hazardous substances in automotive vehicles.

- a directive that describes ecodesign requirements for energy-using products, including information requirements for components and sub-assemblies.

- the European regulatory framework for chemicals, called REACH, which deals with the registration, evaluation, authorization and restriction of chemicals.

- a recent directive on environmental liability with regard to the prevention and remedying of environmental damage.

These requirements are partly under revision by the European Union and their potential impacts cannot currently be determined in detail.

In addition, the Chinese government restricts the use of lead and other hazardous substances in electronic products. Because not all implementing measures are in place, the consequences for our company cannot currently be determined in detail. Similar regulations or substance bans are being proposed or implemented in various countries of the world. We are not able at this time to estimate the amount of additional costs that we may incur in connection with these regulations.

As with other companies engaged in similar activities, we face inherent risks of environmental liability in our current and historical manufacturing locations. Costs associated with future additional environmental compliance or

remediation obligations could adversely affect our business. For a further description of environmental issues that we face see Business Environmental Protection and Sustainable Management .

Our business and financial condition could be adversely affected by current or future litigation.

We are a party to lawsuits in the normal course of our business, including suits involving allegations of intellectual property infringement, product liability and breaches of contract. The results of complex legal proceedings are difficult to predict. There can be no assurance that the results of current or future legal proceedings will not materially harm our business, reputation or brand.

We record a provision for litigation risks when it is probable that a liability has been incurred and the associated amount can be reasonably estimated. We maintain liability insurance for certain legal risks at

Table of Contents

levels our management believes are appropriate and consistent with industry practice. We may incur losses relating to litigation beyond the limits, or outside the coverage, of such insurance and such losses may have a material adverse effect on the results of our operations or financial condition, and our provisions for litigation-related losses may not be sufficient to cover our ultimate loss or expenditure. An unfavorable resolution of a particular lawsuit could have a material adverse effect on our business, operating results, or financial condition. For additional information with respect to legal proceedings, see **Business Legal Matters** .

We are a subject of investigations in several jurisdictions in connection with pricing practices in the DRAM industry, and are a defendant in civil antitrust claims in connection with these matters.

In September 2004, we entered into a plea agreement with the Antitrust Division of the U.S. Department of Justice (the DOJ) in connection with its investigation of alleged antitrust violations in the DRAM industry. Pursuant to this plea agreement, we agreed to plead guilty to a single count relating to the pricing of DRAM products and to pay a fine of \$160 million, payable in equal annual installments through 2009.

In April 2003 we received a request for information regarding DRAM industry practices from the European Commission (the Commission) and in May 2004 we received a notice of a formal inquiry into alleged DRAM industry competition law violations from the Canadian Competition Bureau. We are cooperating with the Commission and the Canadian Competition Bureau in their inquiries.

Subsequent to the commencement of the DOJ investigation, a number of purported class action lawsuits were filed against us and other DRAM suppliers in U.S. federal courts and in state courts in various U.S. states, as well as in different Canadian provinces. The complaints allege violations of U.S. federal and state or Canadian antitrust and competition laws and seek significant damages on behalf of the plaintiffs. In July 2006 the state attorney generals of a number of U.S. states filed actions against us and other DRAM suppliers in U.S. federal courts. The claims involve allegations of DRAM price fixing and artificial price inflation and seek to recover three times actual damages and other relief.

In connection with these matters as well as for legal expenses relating to the securities class action described in **Business Legal Matters** and in accordance with U.S. GAAP, as of September 30, 2008 Infineon Logic had accrued liabilities in the amount of 37 million, and Qimonda had accrued liabilities in the amount of 36 million. Because these matters remain ongoing, we cannot predict at this time whether the reserves will be adequate to cover any further potential liabilities that may be incurred.

An adverse final resolution of the matters described above could result in significant financial liability to, and other adverse effects upon us, which would have a material adverse effect on our business, results of operations and financial condition. Irrespective of the validity or the successful assertion of the above-referenced claims, we could incur significant costs with respect to defending against or settling such claims, which could have a material adverse effect on our results of operations or financial condition or cash flows.

Purported class action lawsuits have been filed against us alleging securities fraud.

Following our announcement in September 2004 of our agreement to plead guilty in connection with the DOJ's antitrust investigation and to pay a fine of \$160 million, several purported securities class action lawsuits have been brought against us in U.S. district courts. The lawsuits were consolidated into one complaint that is pending at the U.S. District Court for the Northern District of California. Plaintiffs allege violations of the U.S. securities laws and assert among other things that we made materially false and misleading public statements about our historical and projected financial results as well as competitive position and manipulated the price of our securities, thereby injuring our shareholders. Although we are defending against these suits vigorously, a significant settlement or negative

outcome at trial could have a material adverse effect on our financial results. See [Business](#) [Legal Matters](#) for a description of these matters.

Table of Contents

We are the subject of an investigation by the European Commission in connection with alleged violations of competition laws in the Chip Card & Security segment.

On October 21, 2008, we learned that the European Commission had commenced an investigation involving our Chip Card & Security segment for alleged violations of competition laws. This investigation is in the very early stages. We are assessing this situation and will continue to monitor the investigation carefully. If the European Commission were to find that our Chip Card & Security segment violated European Union competition laws, the fines and penalties that would likely be imposed on us could be substantial and would be expected to have a material adverse effect on our business, operations and financial condition.

We might be faced with product liability or warranty claims.

Despite extensive quality assurance measures, such as our Automotive Excellence program, there remains a risk that defects may occur in our products. The occurrence of such defects particularly in consumer areas and areas in which personal injury could result, such as our automotive business group could give rise to warranty claims or to liability for damages caused by such defects. We could also incur consequential damages and could, moreover, experience limited acceptance of our products in the market. In addition, customers have from time to time notified us of potential contractual warranty claims in respect of products supplied by us, and may do so in the future. These matters could have a material adverse effect on our business and financial condition.

Additional risks related to Qimonda

As the majority shareholder in Qimonda, we will continue to be negatively impacted by any further adverse developments in the business of Qimonda.

Because we will continue to fully consolidate the financial results of Qimonda as discontinued operations in our consolidated financial statements for so long as Infineon remains the majority shareholder of that company, fluctuations in Qimonda's results of operations will be reflected in our operating results. Our consolidated results of operations will therefore be significantly affected by the success or failure of the management of Qimonda and, although we will have control over Qimonda for so long as we remain its majority shareholder, we will not have the ability to direct its operations on a day-to-day basis. Our ability to realize cash from any further sales of Qimonda securities held by Infineon will be substantially dependent on the market performance of Qimonda's stock, which will in turn depend on the business success of Qimonda and the development of the market for semiconductor memory products, both of which are substantially outside our control.

Market prices for DRAM have experienced extremely significant declines since the beginning of the 2007 calendar year. As a result of this intense pricing pressure, Qimonda continued to incur significant losses during the 2008 fiscal year, which are reflected in Income (loss) from discontinued operations, net of tax in our consolidated statements of operations. During the 2008 fiscal year, we also recorded material write-downs to the carrying value of Qimonda's assets to reflect them at current fair value less costs to sell, in accordance with SFAS No. 144, *Accounting for the Impairment or Disposal of Long-lived Assets*. We currently do not intend to make any further capital contributions to Qimonda and have repeatedly announced that we are seeking to dispose of our remaining 77.5 percent interest in that company. We continue to pursue all potential strategic alternatives for the disposal of our remaining interest in Qimonda, but can provide no assurance that we will be successful in this regard.

On November 7, 2008, the New York Stock Exchange (NYSE) notified Qimonda that it was not in compliance with the NYSE's continued listing standards because the average closing price of its ADSs had been below \$1.00 over a consecutive 30-day trading period. Over the 12-month period ended November 19, 2008, Qimonda's share price fell 98 percent, from \$8.62 to \$0.11. Qimonda has notified the NYSE that it intends to regain compliance with this listing

standard. If Qimonda cannot do so by May 7, 2009, however, the NYSE has indicated that it will commence suspension and delisting procedures against Qimonda.

Table of Contents

Qimonda may be unsuccessful in its ongoing strategic and operational efforts to improve its financial position. If Qimonda is unable to continue to meet its obligations as they come due, Infineon could be exposed to material liabilities related to the Qimonda business, and the operating results and financial condition of Infineon could be materially and adversely affected.

In order to address the ongoing adverse market conditions in the memory products industry and to better enable it to meet its current obligations in the short term, Qimonda has intensively explored operational and strategic alternatives to raise and conserve cash. In furtherance of these goals, on October 13, 2008, Qimonda announced a global restructuring and cost-reduction program that is intended to reposition Qimonda in the market and substantially increase its efficiencies through a wide-ranging realignment of its business. As a part of this program, Qimonda also announced that it had agreed to sell its 35.6 percent interest in Inotera Memories Inc. to Micron Technology, Inc. for \$400 million in cash (approximately 296 million). The transaction was completed in November 2008. Additionally, on December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. This proposed transaction is described under Operating and Financial Review Recent Developments Related to Qimonda . Qimonda has announced that it intends to use the proceeds from this joint investment and the sale of the assets described above to fund its operations in the short-term, including the development of its Buried Wordline technology.

During the 2008 fiscal year, we committed to a plan to dispose of our interest in Qimonda. We remain committed to this plan to dispose of our interest in Qimonda. Accordingly, Infineon has classified the assets and liabilities of Qimonda as held for disposal in accordance with SFAS 144, *Accounting for the Impairment or Disposal of Long-lived Assets* , and recorded the write-downs of Qimonda s assets described above totaling 1,303 million. The net book value of the Qimonda disposal group in our consolidated balance sheet as of September 30, 2008 has been recorded at the estimated fair value less costs to sell of Qimonda in accordance with SFAS No. 144. Upon disposal of Qimonda, in accordance with IFRS, we would also realize losses related to unrecognized currency translation effects for the Qimonda disposal group which are recorded in equity. As of September 30, 2008, the amount of such losses recorded in shareholders equity under IFRS totaled 187 million.

There can be no assurance that the operational and strategic measures described above will enable Qimonda to continue to meet its obligations, or that Qimonda will be successful in implementing any further operational or strategic initiatives to adequately address its financial condition. There can also be no assurance that we will be successful in disposing of our remaining interest in Qimonda. In the event that Qimonda s ongoing operational and strategic efforts fail to generate adequate cash or to result in desired operational efficiencies and resulting cash savings, Qimonda may have difficulty meeting its obligations as they come due. In such a case, our financial condition and results of operations would be materially adversely affected.

In the event that Qimonda were to be unable to meet its obligations, we may be exposed to certain significant liabilities related to the Qimonda business, including pending antitrust and securities law claims, the potential repayment of governmental subsidies received, and employee-related contingencies. Qimonda has accrued approximately 70 million in connection with the antitrust matters and anticipated defense costs in connection with the securities law matters. Given the uncertainty of the timing, nature, scope or success of any specific claim, we are unable to meaningfully quantify our total potential exposure in respect of these matters, but are aware that such exposure, were it to arise, is likely to be material.

Even if we are successful in reducing or eliminating our interest in Qimonda, we will continue to be affected by negative developments in Qimonda s business.

We may conclude a transaction to sell our remaining interest in Qimonda. If we reduce our position to less than 50 percent, as we have announced we intend to do, we will no longer consolidate the results of Qimonda in our group

results. If we retain a minority stake, however, we will continue to be exposed to any adverse developments in Qimonda's results.

Table of Contents

The memory products business is characterized by particularly intense competition and pricing pressure, which could reduce Qimonda's sales or revenues.

The memory products business is particularly competitive, and has been characterized by rapid technological change, short product lifecycles, high capital expenditures, intense pricing pressure, periods of oversupply and continuous advancements in process technologies and manufacturing facilities. Qimonda competes globally with other major DRAM suppliers, including Samsung Electronics, Inc., Micron Technology, Inc., Hynix Semiconductor, Inc., Elpida Memory, Inc., and Nanya Technology Corporation. Some of Qimonda's competitors have substantially greater capital, human and other resources and manufacturing capacities, more efficient cost structures, higher brand recognition, larger customer bases and more diversified product lines than Qimonda. Competitors with greater resources and more diversified operations may have long-term advantages, including the ability to better withstand downturns in the DRAM market and to finance research and development activities. In addition, unfair price competition, government support or trade barriers by or for the benefit of its competitors would adversely affect Qimonda's competitive position.

Increased competitive pressure or the relative weakening of Qimonda's competitive position could continue to materially and adversely affect Qimonda's and our business financial condition and results of operations.

Qimonda's business would continue to suffer if it does not have adequate access to capital.

Qimonda may continue to experience difficulties in raising the amounts of capital required for its business on acceptable terms due to a number of factors, such as general market and economic conditions, inadequate cash flow from operations or unsuccessful asset management. Our business may be hurt if Qimonda is not able to make necessary capital expenditures and finance necessary research and development activities.

Table of Contents

BUSINESS

Overview

We are one of the world's leading semiconductor companies. We have been at the forefront of the development, manufacture and marketing of semiconductors for more than fifty years, first as the Siemens Semiconductor Group and, since 1999, as an independent company. We have been a publicly traded company since March 2000. According to market research company iSuppli, we were the sixth-largest semiconductor company worldwide in the nine months of the 2008 calendar year with our non-memory businesses alone ranked number 10 in that period.

We design, develop, manufacture and market a broad range of semiconductors and complete system solutions used in a wide variety of microelectronic applications. Our core business is conducted through our Automotive, Industrial & Multimarket segment and our Communication Solutions segment. Effective October 1, 2008, we have reorganized our business to better align with our target markets, with five operating divisions: Automotive, Chip Card & Security, Industrial & Multimarket, Wireline Communications and Wireless Solutions.

In addition, we currently hold a 77.5 percent interest in the memory products company Qimonda. During the quarter ended March 31, 2008, we committed to a plan to dispose of Qimonda. We are actively pursuing our disposal plan and expect to finalize the disposal by the end of the second quarter of the 2009 fiscal year. As a result, the historical results of Qimonda are reported as discontinued operations in the condensed consolidated statements of operations for all periods presented, and the assets and liabilities of Qimonda have been reclassified as held for disposal in the condensed consolidated balance sheets for all periods presented. On December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. This proposed transaction is described under Operating and Financial Review Recent Developments Related to Qimonda .

The address of our principal executive offices is: Am Campeon 1-12, D-85579, Neubiberg, Germany, and our main telephone number is +49-89-234-0. Our agent in the United States is Infineon Technologies North America Corp., which has its principal executive offices at 640 N. McCarthy Blvd., Milpitas, CA 95035.

The principal developments during the 2008 fiscal year included the following:

Corporate and Commercial Developments

In December 2007, we announced an agreement with IBM to broaden the availability of our high-volume Embedded Flash process. We will license our 130-nanometer Embedded Flash technology to IBM for new chip designs manufactured by IBM in North America. Additionally, we will utilize IBM foundry services for future products based on this process.

In January 2008, we and automotive system manufacturer Delphi Corporation announced a strategic technology collaboration for the development of a new generation of body control units based on the AUTOSAR (AUTomotive Open System ARchitecture) standard.

Also in January 2008, we entered an agreement with Volkswagen to use an Infineon microcontroller in automotive body and convenience electronics. Volkswagen will use the microcontroller to provide greater gateway capabilities in automotive body and convenience electronics to support the increasing requirements for networking and communication between individual automotive subsystems.

In February 2008, we signed an agreement with a tier 1 handset company to supply our SMARTitmUE+ chip for their HSxPA/ EDGE products. The SMARTitmUE+ is the world's first single chip Receive-diversity transceiver IC with a standard DigRF V3.09 interface. The single chip RF significantly improves the signal quality from base station to handset.

In March 2008, we announced a collaboration with Intel Corporation to serve the TPM (Trusted Platform Module) market. Infineon was selected as an Intel Preferred Supplier of TPM 1.2 Client Software for Intel's Trusted Platform Module (Intel TPM) 1.2 Hardware Solution.

Table of Contents

Also in March 2008, we and LSI Corporation entered into an agreement under which LSI acquired our HDD (hard disk drive) business. By divesting our non-core HDD business, we furthered our strategic goal of focusing on our core markets. The transaction closed in April 2008.

In April 2008, we signed a memorandum of understanding with the European Commission to advance the development of intelligent emergency call systems. The European emergency call system eCall is to be a standard feature in all new automobiles registered for road use in EU countries from September 2010.

Also in April 2008, we and Samsung Electronics, Inc. entered into a collaboration for the use of Infineon's HSDPA Platform XMM™6080 in Samsung's new family of HEDGE (HSDPA/EDGE) mobile handsets.

Also in April 2008, we entered into an agreement to buy Primarion Corporation. Primarion produces digital power integrated circuits (ICs) for power management in computing, graphics and communication markets. With this acquisition, we strive to broaden our product portfolio in the area of digital power management ICs and to become a leader in this fast growing market.

In August 2008, we announced that we are the sole supplier for security chip cards for one of China's largest contactless transportation cards—the Shenzhen Tong microcontroller card. The Shenzhen Tong card utilizes contactless microcontrollers from our SLE 66PE product family. More than three million of these microcontroller cards are expected to be issued by the end of the 2008 calendar year.

Technical and Product Developments

We introduced a new family of radar system ICs (RASIC™) which could bring long- and medium-range automotive radar to mid-range cars as soon as mid 2010. Infineon's RXN7740 is a highly integrated front-end chip for the 76-77 GHz frequency range which includes function blocks for the oscillator, the power amplifier and four mixers for multiple antennas.

We introduced our new family of 16-bit real-time signal controllers that feature fast interrupt response time and context switching specifically targeting industrial drive applications. The new XE166 family of Real-Time Signal Controllers (RTSC) can control up to four individual motors simultaneously.

We announced a 32-bit high-security flash microcontroller designed to bring a significant layer of security and convenience to mobile applications based on NFC (Near Field Communication). In addition to its extensive hardware security capability, the new NFC-enabled SIM card microcontroller combines a Single Wire Protocol (SWP) interface with contactless Mifare™ technology.

We unveiled a new TVS (transient voltage suppression) protection diode, which is the smallest in the world. With a footprint of just 0.6 x 0.3 square millimeter and a mere 0.3 millimeter high, the ESD series diode is designed to protect the latest electronic communication and consumer devices against electrostatic overvoltages. The TVS diode can reliably absorb electrostatic discharges as high as 20kV and a response time of less than 0.5 nanoseconds.

We launched a new microcontroller family for automotive powertrain and chassis applications. The new Infineon AUDO FUTURE family of 32-bit microcontrollers uses the TriCore core that combines microcontroller functions with digital signal processing and the industry's highest density flash memory. The family also includes the first FlexRay communications block that has been approved by the TÜV Nord Group's Institute for Vehicle Technology and Mobility, combined with industry-proven AUTOSAR software

and a peripheral control processor that offers additional system performance.

We introduced the CoolMOS 900 V power MOSFET family, intended for high-efficiency SMPS (switched-mode power supply), industrial and renewable energy applications.

We announced three new families of power semiconductors, the OptiMOS 3 40V, 60V and 80V families, which reduce power losses by as much as 30 percent in a given standard TO (Transistor Outline) package.

Table of Contents

We introduced the SmartLEWIS MCU PMA71xx family for wireless control applications. With the SmartLEWIS MCU family, remote control units can use radio frequency (RF) technology instead of today's infrared transmission, overcoming the disadvantage of line-of-sight communication.

We presented the world's first single chip CAT-iq/DECT wireless engine for basestations, dubbed the COSIC (Cordless Single Chip)-Modem. The COSIC-Modem integrates the baseband processor, transceiver and power amplifier in a monolithic CMOS single chip for high quality cordless IP telephony.

We introduced the X-GOLD 113 and the X-GOLD 213 which enable advanced mobile phone features such as camera, mobile Internet and audio-entertainment to be accessible in low-cost markets. The integration of these features allows customers to reduce the production cost of core mobile functions by up to 40 percent compared with more traditional solutions.

We announced two new LDMOS RF power transistors targeting wireless infrastructure applications, such as WiMAX, in the 2.5 GHz-to-2.7 GHz frequency band. The high peak power performance of the new LDMOS RF power transistors will enable designers to simplify their RF power amplifier designs.

We introduced a new generation 3G platform family. This new platform family addresses all major 3G market segments and includes a high performance HSPA modem solution, a feature phone solution enriched with high multimedia capabilities and a cost-efficient 3G solution.

We announced the world's first DSL CPE (customer premise equipment) solution optimizing support for such applications as IPTV (Internet Protocol Television) and providing the best possible quality of service across a wide range of deployment conditions. Our IPTV over DSL feature package includes innovative features such as predictive error decoding (Erasure Decoding) and Gamma Layer Retransmission for xDSL CPE solutions.

Industry Background

Semiconductors power, control and enable an increasing variety of electronic products and systems. Improvements in semiconductor process and design technologies continue to result in ever more powerful, complex and reliable devices at a lower cost per function. As their performance has increased and size and costs have decreased, semiconductors have become common components in products used in everyday life, including personal computers, telecommunications systems, wireless handheld devices, automotive products, industrial automation and control systems, digital cameras, digital audio devices, digital TVs, chip cards, security applications and game consoles.

The market for semiconductors has historically been volatile. Supply and demand have fluctuated cyclically and have caused pronounced fluctuations in prices and margins. Following a severe downturn in 2001, the industry experienced a further period of low demand and ongoing worldwide overcapacity during 2002. In 2003 and in particular in 2004, the semiconductor market showed stronger performance. During 2005, global semiconductor market growth slowed significantly to 7 percent, according to WSTS. In 2006 market growth slightly accelerated to 9 percent. In 2007, market growth decelerated, down to 3 percent. For the 2008 calendar year, WSTS anticipates a growth rate of 2.5 percent for the global semiconductor market. For the 2009 calendar year, WSTS forecasts a decrease in revenues in the global semiconductor market of 2.2 percent and Gartner Dataquest forecasts a decrease of 16 percent.

Strategy

We strive to achieve profitable growth in our core businesses by maintaining and expanding our leadership position in semiconductor solutions for energy efficiency, security, and communications. To achieve these goals, we seek to:

Build on our leadership position in key markets, in particular by helping to improve energy efficiency. We believe that our success to date has been based on a deep understanding of a wide range of applications for the automotive and industrial sectors as well as for personal computers and other consumer devices. Our leading position in these areas is built on high-

Table of Contents

performance products, superior process technologies and optimized in-house manufacturing capabilities. We see significant growth potential for our power business, in particular, driven by high energy costs and the need for ever longer battery lifetimes in mobile devices.

Provide the technology to be connected every day & everywhere from home, in the office or on the way. We seek to continue to profit from our key strengths in areas such as RF and mixed signal technologies employed in particular in our communications businesses. In order to benefit from the ever-increasing need for mobility and communication in all aspects of day-to-day life, we intend to broaden our customer base and to focus on the most promising solutions for future profitable growth, such as cellular phone platforms and broadband customer premises equipment.

Strengthen our leadership position in security solutions. We intend to leverage our know-how to address applications in new areas, and believe we are well positioned to benefit from future trends like the transition to e-passports and the implementation of digital rights management in consumer devices. We believe that the ever-increasing digitalization and increasing mobility in daily life will continue to be a key driver for our security business.

Manage carefully the mix of make-versus-buy in manufacturing and process technology development. We intend to continue to invest in those process technologies that provide Infineon with a competitive differentiator. This is the case in particular in our power process technologies and in manufacturing capacity that can meet the very high quality requirements of automotive customers. At the same time, in standard CMOS below 90-nanometer, we will continue to share risks and expand our access to leading-edge technology through long-term strategic partnerships with other leading industry participants. We do not intend to invest in in-house capacity for standard CMOS processes below the 90-nanometer node, and we will make use of manufacturing at silicon foundries instead.

Seek to improve our margin in the 2009 fiscal year and beyond and to secure our long-term competitiveness, including through our IFX 10+ program. In order to improve our margin and maximize the overall efficiency of our operations, we have introduced our IFX 10+ cost reduction program, with the goal of identifying and executing structural improvements leading to significant ongoing cost savings. In particular, through this program we seek to improve our portfolio management, further reduce manufacturing and administrative costs, and boost the efficiency of our R&D efforts and our overall organization.

Table of Contents**Products and Applications**

The following summary provides an overview of some of our more significant products and applications, and the four largest customers of each of our two reportable segments, in the 2008 fiscal year.

Principal Products, Applications and Customers

Segment	Principal Products	Principal Applications	Four Largest Customers in the 2008 Fiscal Year
Automotive, Industrial & Multimarket	Power semiconductors (discretes, ICs and modules), sensors and microcontrollers (8-bit, 16-bit, 32-bit) with and without embedded memory, silicon discretes, chip card and security ICs, ASIC design solutions including secure ASICs, Trusted Platform Modules	Automotive: Powertrain (engine control, transmission control, hybrid), body and convenience (comfort electronics, air conditioning), safety and vehicle dynamics (ABS, airbag, stability control), connectivity (wireless communication, telematics/navigation) Industrial & Multimarket: Power management & supplies, lighting, drives, renewable energy, power generation and distribution, industrial control, discrete commodity products (e.g., handsets) Security & ASICs: Chip card and security ICs (e.g., for mobile communication, identification, finance), platform security for computers and in networks (i.e., Trusted Platform Modules), game consoles, hearing aids, computer peripherals	Avnet, Bosch, Continental, Siemens
Communication Solutions	Baseband ICs, RF transceivers, power management ICs, single chip ICs integrating these components, mobile phone platform solutions including	Mobile telephone systems for major standards (GSM, GPRS, EDGE, UMTS), cordless telephone systems for major standards (WDCT, DECT), RF connectivity solutions (e.g.,	Hon Hai Precision, LG Electronics, Nokia, Samsung

software, DECT chipsets, tuner ICs, RF-power transistors, ICs for voice access and core access (e.g., CODECs, SLICs, ISDN, T/E), broadband access ICs for xDSL CO/CPE, VoIP, Ethernet switch and PHY, system solutions for DSL-modems, home-gateways	Bluetooth, GPS), cellular base stations, voice access and core access, broadband access solutions for central office, broadband customer premises equipment
--	--

Automotive, Industrial & Multimarket

The Automotive, Industrial & Multimarket segment designs, develops, manufactures and markets semiconductors and complete system solutions primarily for use in automotive, industrial and security applications, in addition to applications with customer-specific product requirements. Our automotive and industrial business units focus on microcontrollers and power semiconductors (which handle higher voltage and higher current than standard semiconductors), discrete semiconductors, modules and sensors. According to Strategy Analytics, we were the second largest producer of ICs for automotive electronics worldwide in 2007, with more than 9 percent of the market, and the largest in Europe. Within the fragmented market for industrial semiconductor applications, we focus on power management and supply, as well as drives and power generation and distribution. IMS Research reported that we were the number one supplier worldwide for power semiconductors in 2007, with a market share of more than 9 percent. Our broad portfolio addressing consumer, computing and communication applications ranges from discrete semiconductors and power devices to chip card and security ICs and ASIC design solutions.

Table of Contents

Automotive

The market for semiconductors for automotive applications has grown substantially in recent years, reflecting increased electronic content in automotive applications in the areas of safety, power train, body and convenience systems. This growth also reflects increasing substitution of mechanical devices, such as relays, by semiconductors, in order to meet more demanding reliability, space, weight, and power reduction requirements.

Our automotive team offers semiconductors and complete system solutions in the engine management, safety and chassis, body and convenience, and infotainment markets, in some cases including software. Our principal automotive products include:

Semiconductors for power train applications, which perform functions such as engine and transmission control and hybrid power trains;

Semiconductors for safety management, which manage tasks such as the operation of airbags, anti-lock braking systems, electronic stability systems, power steering systems and tire pressure monitoring systems;

Semiconductors for body and convenience systems, which include light modules, heating, ventilation and air conditioning systems, door modules (power windows, door locks, mirror control) and electrical power distribution systems; and

Semiconductors for connectivity, such as those used for wireless communication and navigation/telematics.

According to Strategy Analytics, body & convenience systems comprise the largest portion of the market, followed by safety and vehicle dynamics systems, power train applications, such as transmission, engine and exhaust control, in-car entertainment, and driver information.

Our automotive products include power semiconductors, microcontrollers, discrete semiconductors and silicon sensors, along with related technologies and packaging. To take advantage of expected growth in the market for green vehicles, our power competencies across all of our business units are bundled in order to better enable us to provide semiconductor and power module solutions for hybrid vehicles.

Time periods between design and sale of our automotive products are relatively prolonged (three to four years) because of the long periods required for the development of new automotive platforms, many of which may be in different stages of development at any time. This is one of the reasons why automotive products tend to have relatively long life-cycles compared to our other products. The nature of this market, together with the need to meet demanding quality and reliability requirements designed to ensure safe automobile operation, makes it relatively difficult for new suppliers to enter.

In order to strengthen our position in all areas of automotive electronics, we seek to further develop our strong relationships with world-wide leading car manufacturers and their suppliers, with a particular focus on those at the forefront in using electronic components in cars. We also seek to further strengthen our presence in the United States and to expand in other geographic areas, notably Asia Pacific including Japan. We believe that our ability to offer complete semiconductor solutions integrating power, analog and mixed-signal ICs and sensor technology is an important differentiating factor among companies in the automotive market. We also believe that our strength in this historically relatively stable market complements our strengths in other markets that may be subject to greater market volatility.

We strongly emphasize high quality in our products. We have implemented a group-wide program called Automotive Excellence, through which we aim for the goal of zero defects in our automotive semiconductors and solutions.

Industrial & Multimarket

The market for semiconductors for industrial applications is highly fragmented in terms of both suppliers and customers. It is characterized by large numbers of both standardized and application-

Table of Contents

specific products. These products are employed in a large number of diverse applications in industries such as transportation, factory automation and power supplies.

Within the industrial business, we focus on two major applications: power management & supply, and power conversion. We provide differentiated products combining diverse technologies to meet our customers' specific needs. With global energy demand continuing to rise and supplies generally tightening, power semiconductors can make a major contribution by addressing the increasing need for energy savings.

We have a strong position in power applications within the industrial and automotive segments. According to the annual market reports of IMS Research, we have been the global market leader for power semiconductors for the past five years, with a 9.7 percent market share in 2007.

Our broad portfolio comprises power modules, small signal and discrete power semiconductors, power management ICs and microcontrollers. Our industrial products are used in a wide range of applications, such as:

Power supplies (AC/DC), divided into two main categories: uninterruptible power supplies, such as power backbones for Internet servers; and switched-mode power supplies for PCs, servers and consumer electronics such as televisions and gaming consoles, as well as battery chargers for mobile phones, notebook computers and other handheld devices;

DC/DC power converters for computing and communication applications such as motherboards, telecommunications equipment and graphic cards;

Lighting (electronic lamp ballast and control);

Drives for machine tools, motor controls, pumps, fans and heating, ventilation, consumer appliances (such as washing machines), air-conditioning systems and transportation as well as power supplies for additional consumer appliances such as inductive cooking;

Industrial automation, meters and sensors;

Power generation, especially in the fields of renewable energy and power distribution systems; and

Other industrial applications such as medical equipment.

Our portfolio of semiconductor discretes includes:

AF (audio frequency) discretes (general purpose diodes and transistors, switching diodes, digital transistors);

RF (radio frequency) discretes (diodes, transistors, Small Scale Integrated Circuits (SSICs), Monolithic ICs);

HIPAC (High Performance Active and Passive Integration) devices offering ESD/EMI (Electro Static Discharge/Electro Magnetic Interference) protection and high integration in advanced applications (e.g., in mobile communication devices); and

SMM (Silicon MEMS Microphone): acoustical sensors based on MEMS (Micro-Electro-Mechanical System) semiconductor technology (for use in mobile phone applications, for example).

Security & ASICs

Our chip card and security unit designs, develops, manufactures and markets a wide range of security controllers and security memories for chip card and security applications. According to Frost & Sullivan, we remained the market leader in ICs for smart card applications in the 2007 calendar year, with a market share of 26.6 percent.

Table of Contents

Our products include security memory ICs, security microcontroller ICs for identification documents, payment cards, SIM cards, prepaid telecom cards, access and transportation cards, as well as RFID ICs for object identification and access.

The markets for our security products are characterized by an increasing emphasis on high-security applications like identification and payment, and by trends towards lower prices and higher demand for embedded non-volatile memory in SIM cards.

Within our ASIC design & security business we focus on customer-specific products integrating intellectual property from our customers with our own IP. These products are used in a variety of markets, with a special focus on systems for mobility, industrial, data storage and security. The main products of this business unit include:

Systems on Chip (SoC) for HDD applications;

Products for computer and gaming peripherals (e.g., in wireless control pads or memory sticks);

Secure ASICs, taking advantage of our security know-how (e.g., for authentication or copy protection);

Trusted Platform Module (TPM) products (hardware-based security for trusted computing); and

Customer designs manufactured by us on a foundry basis.

Many of these products are made to meet customer specifications, and are often provided by us on a sole-source basis. As a result, we are often able to establish long-term relationships with customers in this area, in some cases actively supporting the customer's product roadmap.

Communication Solutions

Our Communication Solutions segment designs, develops, manufactures and markets a wide range of ICs, other semiconductors and complete system solutions for wireless and wireline communication applications. We are among the leading players in the markets for semiconductor solutions for mobile phones as well as wireline access networks.

Wireless Communications

In wireless communications, our principal products include baseband ICs, RF transceivers and single-chip ICs for the major standards (GSM, GPRS, EDGE and UMTS), power management ICs, radio-frequency products such as Bluetooth ICs, GPS ICs, and tuner ICs, as well as RF-power components for wireless infrastructure (base stations). Our principal solutions include hardware system design and software solutions for mobile telephone systems (addressing primarily the GSM, GPRS, EDGE, and UMTS standards).

According to iSuppli in the 2007 calendar year we held the number three position in wireless ASSPs with a worldwide market share of 6 percent.

The markets for products in which our cellular communication ICs and systems are utilized are characterized by trends towards lower cost, increasingly rapid succession of product generations, increased system integration, and market consolidation. According to Strategy Analytics, over 1.1 billion cellular handsets were produced in the 2007 calendar year, compared with about 1 billion devices in 2006. This growth was to a large extent driven by a strong demand in emerging markets. Increasing demand for connectivity and multimedia capability is expected to increase the IC content of mobile phones. However, despite such increased demand, the average selling prices for cellular

phone ICs have declined in recent years. We expect that a further price decline of entry-level handset models, often referred to as Ultra Low Cost telephones, will generate additional demand in emerging markets. We expect these trends to create both opportunities and threats for suppliers of cellular communication semiconductors and systems.

Table of Contents

We offer products and solutions to customers in the following principal application areas:

GSM, or Global System for Mobile Communication, which is the de facto wireless telephone standard in Europe and available in more than 120 countries. GSM is a wireless mobile telecommunication standard that includes General Packet Radio Service (GPRS), Enhanced Data rate for GSM Evolution (EDGE), and Universal Mobile Telecommunications System (UMTS). We offer products and solutions such as baseband ICs, RF transceivers, power management ICs, single-chip ICs integrating these components, mobile software, and reference designs addressing all of these wireless communication standards;

UMTS, a GSM-based standard for third-generation (3G) broadband, packet-based transmission of text, digitized voice, video, and multimedia at data rates up to 2 megabits per second (Mbps). We offer complete multimedia mobile phone platforms, RF transceivers and mobile software for UMTS and also for the HSDPA standard (High-Speed Downlink Packet Access) that supports data rates of up to 7.2 Mbps;

DVB (Digital Video Broadcasting), covering a number of generally accepted protocol standards for digital television. DVB-T (Digital Video Broadcasting Terrestrial) and DVB-H (Digital Video Broadcasting Handhelds) are television protocol standards that enable digital transmission of digital content for moving reception devices, such as mobile phones and PDAs (Personal Digital Assistants). We offer tuner ICs for stationary, portable and mobile television receivers for the analog (PAL, NTSC) and digital (DVB-C/T, ISDB, ATSC, DAB, DVB-H, T-DMB, ISDB-T) TV standards;

The Global Positioning System (GPS), a location system based on a network of satellites. GPS is widely used in automotive, wireless, mobile computing and consumer applications. Together with a development partner (which was subsequently acquired by Broadcom), we have introduced the Hammerhead product family, a single-chip Assisted Global Positioning System (A-GPS) receiver for mobile telephones, smart phones and PDAs; and

Bluetooth, a computing and telecommunications industry specification that allows mobile phones, computers and PDAs to connect with each other and with home and business phones and computers using a short-range wireless connection. We offer BlueMoon UniCellular, a fast and energy-efficient Bluetooth-chip which supports the Bluetooth enhanced data rate (EDR) protocol.

In the first quarter of our 2008 fiscal year we acquired the Mobility Products Group of LSI Logic Corporation. With this acquisition we furthered our strategic goal of strengthening our product portfolio for our wireless customers.

Wireline Communications

In Wireline Communications, we offer a broad product portfolio and complete system solutions focused on wireline access applications. Our solutions are deployed at major service providers worldwide. According to Gartner Dataquest, we held the number one position in the wireline access network IC market (excluding cable modem transceiver ICs, which we do not address) in 2007, with a market share of 22 percent.

The market for our wireline communications products is currently characterized by the launch of high-speed data and video broadband services (e.g. IPTV) from service providers around the world, the convergence of voice and data networks into a single IP-based Next-Generation Network (NGN) infrastructure, market consolidation, and strong pricing pressure.

Our broad portfolio in wireline communication includes semiconductors for voice access and core access, xDSL transceivers for central office (CO) and customer premises equipment (CPE), VoIP ICs, Ethernet switches and PHYs,

DECT ICs and system solutions for DSL modems and home gateways. This

Table of Contents

comprehensive product portfolio allows complete, end-to-end access solutions that enable the triple play of voice, data, and video applications.

The primary applications for our wireline communication products include:

broadband CPE equipment such as xDSL-modems and home-gateways;

broadband access solutions for the central office, such as xDSL line cards; and

voice access, core access and enterprise applications, e.g., analog line cards, ISDN, T/E, ATM and PBX.

During the fourth quarter of the 2007 fiscal year we acquired the DSL CPE business of Texas Instruments, Inc. This acquisition has enabled us to combine our innovative broadband CPE roadmap with Texas Instruments Inc.'s large deployed DSL CPE base at major carriers worldwide.

Customers, Sales and Marketing

Customers

We sell our products to customers located mainly in Europe, the United States, the Asia/Pacific region and Japan.

We target our sales and marketing efforts on demand creation at approximately 440 direct customers worldwide without customers specific to Qimonda.

On a group-wide basis, no customer accounted for more than 10 percent of our sales in the 2008 fiscal year, and our top 20 customers accounted for approximately 56 percent of our sales.

We focus our sales efforts on semiconductors customized to meet our customers' needs. We therefore seek to design our products and solutions in cooperation with our customers so as to become their preferred supplier. We also seek to create relationships with our major customers that are leaders in their market segments and have the most demanding technological requirements in order to obtain the system expertise necessary to compete in the semiconductor markets.

We have sales offices throughout the world. We believe that this global presence enables us not only to respond promptly to our customers' needs, but also to be involved in our customers' product development processes and thereby be in a better position to design customized ICs and solutions for their new products. We believe that cooperation with customers that are leaders in their respective fields provides us with a special insight into these customers' concerns and future development of the market. Contacts to our customers' customers and market studies about the end consumer also position us to be an effective partner for our customers.

We believe that a key element of our success is our ability to offer a broad portfolio of technological capabilities and competitive services to support our customers in providing innovative and competitive products to their customers and markets. This ability permits us to balance variations in demand in different markets and, in our view, is a significant factor in differentiating us from many of our competitors.

Below we provide more detailed information on the customers of each of our principal segments:

Automotive, Industrial & Multimarket

Automotive

In the automotive business, which includes sales of microcontrollers, power devices and sensors, our customer base includes most of the world's major automotive suppliers. Our two largest customers in the 2008 fiscal year were Bosch and Continental. Sales of automotive products are made primarily in Europe and, to an increasing extent, in the United States, China, Korea and Japan.

Table of Contents

Industrial & Multimarket

In the industrial & multimarket businesses, the Siemens group is the largest OEM customer, but the bulk of our sales of industrial products are made in small volumes to customers that are either served directly or through third-party distributors such as Arrow, Avnet and WPG Holdings. Our sales of industrial products vary by type of product, with devices for drive and power conversion applications sold primarily in Europe and the United States, and devices for power management and supply sold primarily in Asia (other than Japan) and Europe. Our wide variety of discrete commodity products is targeted at customers in all major fields of applications, including consumer, computing and communication.

Security & ASICs

Our chip card and security business derives a large portion of its revenues from large-scale projects like ePassport projects. Within the chip card business, three card manufacturers – Gemalto, Giesecke & Devrient and Oberthur Technologies – accounted for a significant portion of sales. We maintained our strong worldwide position in the security business during the 2008 fiscal year.

With our broad and complementary IP portfolio, system integration skills, and manufacturing expertise, we seek to leverage our IP into ASIC-based system solutions. We concentrate on customized designs for customers such as Siemens and Microsoft Corporation.

Communication Solutions

Wireless Communications

In the field of wireless communications, we sell a wide variety of products addressing applications such as cellular phones, transmission technologies for short, middle and long distances, tuners, positioning systems and wireless infrastructure to most of the world's leading wireless device and equipment suppliers. In cellular phone applications, customers purchase products that range from ASSPs and customized ASSPs that we produce to customer design and specifications to complete system solutions including mobile software. With complete system solutions, we target OEMs as well as design houses and ODMs. Our largest announced cellular phone customers include LG Electronics, Nokia and Samsung. To our wireless infrastructure customers, such as Ericsson, we supply RF-power products.

Wireline Communications

The wireline communications business sells IC products for telecommunication and data communication applications to a world-wide customer base, targeted at system providers of broadband communication applications. Our product portfolio includes ICs for voice and core access solutions (for example, CODECs, SLICs, ISDN, T/E), broadband access system solutions for xDSL and VoIP, as well as system solutions for broadband CPE, home networking equipment, and cordless phones.

The largest customers of our wireline communications business include leading telecommunications and data communications customers such as Alcatel-Lucent, Arcadyan, AVM, Ericsson, Huawei and Nokia Siemens Networks. We deliver our semiconductor solutions to our customers either directly, via distributors such as Avnet, or via system manufacturers. Our cordless telephone customers typically purchase complete system IC kits including baseband ICs, RF ICs and power amplifiers.

Sales and Marketing

As of September 30, 2008, we had approximately 2,259 sales and marketing employees (including approximately 354 Qimonda employees) worldwide.

We create and fulfill our product sales either directly or through our network of distribution partners.

A team of Corporate Account Executives is assigned to develop business relationships with our most important strategic customers. Dedicated Account Managers foster our relationships with all other important direct customers. Regional sales units offer additional support for global accounts based in

Table of Contents

their regions, as well as local accounts that are key players in specific markets. In three smaller markets we still have contractual arrangements with the Siemens and Epcos sales organizations to provide defined sales support.

To serve the broader market and expand our indirect sales, a dedicated organization develops, maintains and interacts with a strong network of distribution partners. This optimized network includes globally active distributors, strong regional partners and committed niche specialists. In addition, third-party sales representatives help to identify and create business, particularly in the United States.

A number of our important direct customers increasingly outsource activities ranging from product design and procurement to manufacturing and logistics to global Electronics Manufacturing Services (EMS). To meet the specific requirements of the EMS industry, we have a dedicated EMS sales team. Focusing on the EMS market leaders, these account managers follow up on manufacturing transfers from OEM to EMS and conclude strategic partnerships for design and technology to increase our market share within the EMS channel.

Within each of our business units, we have product- and applications-oriented marketing employees. These employees investigate market trends and the needs of their respective segments to grow our market share. They define, develop, optimize and position new products and provide product support from market introduction up to the end-of-life stage.

Finally, we utilize advertising campaigns mainly in the trade press to establish and strengthen our identity as a major semiconductor provider and actively participate in trade shows, conferences and events to strengthen our brand recognition and industry presence.

Backlog

Standard Products

Cyclical industry conditions in the memory products market, in particular make it undesirable for many customers to enter into long-term, fixed-price contracts to purchase standard (i.e., non-customized) semiconductor products. As a result, the market prices of our standard semiconductor products, and our revenues from sales of these products, fluctuate very significantly from period to period. Most of our standard non-memory products are priced, and orders are accepted, with an understanding that the price and other contract terms may be adjusted to reflect market conditions at the delivery date. It is a common industry practice to permit major customers to change the date on which products are delivered or to cancel existing orders. For these reasons, we believe that the backlog at any time of standard products, such as memory products, is not a reliable indicator of future sales.

Non-Standard Products

For more customized products, orders are generally made well in advance of delivery. Quantities and prices of such products may nevertheless change between the times they are ordered and when they are delivered, reflecting changes in customer needs and industry conditions. During periods of industry overcapacity and falling sales prices, customer orders are generally not made as far in advance of the scheduled shipment date as during periods of capacity constraints, and more customers request logistics agreements based on rolling forecasts. The resulting lower levels of backlog reduce our management's ability to forecast optimum production levels and future revenues. As a result, we do not rely solely on backlog to manage our business and do not use it to evaluate performance.

Competition

The markets for many of our products are intensely competitive, and we face significant competition in each of our product lines. We compete with other major international semiconductor companies, some of which have substantially

greater financial and other resources with which to pursue research, development, manufacturing, marketing and distribution of their products. Smaller niche companies are also

Table of Contents

becoming increasingly important players in the semiconductor market, and semiconductor foundry companies have expanded significantly. Competitors include manufacturers of standard semiconductors, application-specific ICs and fully customized ICs, including both chip and board-level products, as well as customers that develop their own integrated circuit products and foundry operations. We also cooperate in some areas with companies that are our competitors in other areas.

The following table shows key competitors for each of our principal operating segments in alphabetical order:

Key Competitors by Segment

Automotive, Industrial & Multimarket	Atmel, Freescale, International Rectifier, Mitsubishi, NXP, Renesas, Samsung, STMicroelectronics, Texas Instruments
Communication Solutions	Broadcom, Conexant, Freescale, ST-NXP Wireless, Qualcomm, Texas Instruments

We compete in different product lines to various degrees on the basis of product design, technical performance, price, production capacity, product features, product system compatibility, delivery times, quality and level of support. Innovation and quality are competitive factors for all segments. Production capacity as well as the ability to deliver products reliably and within a very short period of time play particularly important roles.

Our ability to compete successfully depends on elements both within and outside of our control, including:

- successful and timely development of new products, services and manufacturing processes;
- product performance and quality;
- manufacturing costs, yields and product availability;
- pricing;
- our ability to meet changes in our customers' demands by altering production at our facilities;
- our ability to provide solutions that meet our customers' specific needs;
- the competence and agility of our sales, technical support and marketing organizations; and
- the resilience of our supply chain for services that we outsource and the delivery of products, raw materials and services by third-party providers needed for our manufacturing capabilities.

Manufacturing

Our production of semiconductors is generally divided into two steps, referred to as the front-end process and the back-end process.

Front-end

In the first step, the front-end process, electronic circuits are produced on raw silicon wafers through a series of patterning, etching, deposition and implantation processes. At the end of the front-end process, we test the chips for

functionality.

We believe that we are one of the leaders in the semiconductor industry in terms of the structure size on our wafers. Structure size refers to the minimum distances between electronic structures on a chip. Smaller structure sizes increase production efficiencies in the production of memory and logic products. The structure size of our current logic products is as small as 90-nanometers and we have qualified 65-nanometer technology at multiple manufacturing sites.

Table of Contents

We think that we achieve substantial differentiation at our customers due to our power semiconductor process technology and our world-wide network of manufacturing sites that combine the highest quality standards and flexibility.

Back-end

In the second step of semiconductor production, the back-end process (also known as the packaging, assembly and test phase), the processed wafers are ground and mounted on a synthetic foil, which is fixed in a wafer frame. Mounted on this foil, the wafer is diced into small silicon chips, each one containing a complete integrated circuit. One or multiple individual chips are removed from the foil and fixed onto a substrate or lead-frame base, which will enable the physical connection of the product to the electronic board. The next step is creating electrical links between the chip and the base by soldering or wiring. Subsequently, the chips and electrical links are molded with plastic compounds for stabilization and protection. Depending on the package type, the molded chips undergo a separation and pin bending process. Finally, the semiconductor is subject to functional tests.

Our back-end facilities are equipped with state-of-the-art equipment and highly automated manufacturing technology, enabling us to perform assembly and test on a cost-effective basis. We have improved our cost position by moving significant production volumes to lower-cost countries such as Malaysia and China. Our back-end facilities also provide us with the flexibility needed to customize products according to individual customer specifications (giving us System in Package capabilities). We continued the process of converting our packages to comply with new international environmental requirements for lead- and/or halogen-free green packages in the 2008 fiscal year.

Table of Contents***Manufacturing Facilities***

We operate manufacturing facilities around the world, including through joint ventures in which we participate. The following table shows selected key information with respect to our current major logic manufacturing facilities:

Manufacturing Logic Facilities in 2008

	Year of commencement of first production line	Principal products or functions
Front-end facilities wafer fabrication plants		
Dresden, Germany	1996	ASICs with embedded flash memory, logic ICs
Essonnes, France ⁽¹⁾	1963 ⁽²⁾	Logic ICs and ASICs with embedded flash memory
Horten, Norway	1985	MEMS
Kulim, Malaysia	2006	Power, smart power, ASICs with embedded flash memory
Regensburg, Germany	1986	Power, smart power, sensors, mixed signal
Villach, Austria	1979	Power, smart power and discretes
Warstein, Germany	1965 ⁽²⁾	High power
Back-end facilities assembly and final testing plants		
Batam, Indonesia	1996	Leaded power and non-power ICs
Cegléd, Hungary	1997	High power
Morgan Hill, California	2002	RF-power
Regensburg, Germany	2000	Chip card modules, sensors and pilot lines
Singapore	1970	Leadless and leaded non-power ICs, wafer test
Skoppum, Norway	1991	Sensors
Warstein, Germany	1965 ⁽²⁾	High power
Wuxi, China	1996	Discretes, chip card modules
Malacca, Malaysia	1973	Discretes, power packages, sensors, logic ICs, leaded power

(1) ALTIS, our joint venture with IBM.

(2) The current main production line began operations in 1991.

In addition to our own manufacturing capacity, we have entered into a number of alliances and joint ventures, and have relationships with several foundry partners, which give us access to substantial additional manufacturing capacity, allowing us to more flexibly meet variable demand for products over market cycles. These arrangements are described below under **Manufacturing joint venture** and **Strategic Alliances and Other Collaborations** .

Front-end

Our logic front-end facilities currently have a capacity of approximately 280,000 200-millimeter equivalent wafer starts per month. In implementing our fab-light strategy, we have begun to shift the focus of our in-house manufacturing toward power logic products and to shift manufacturing of advanced CMOS logic products to foundries. In this context we have pursued the sale of our share in ALTIS.

In 2008, in-house production of advanced logic wafers (with structure sizes of 250-nanometers or less) was carried out at our 200-millimeter manufacturing facility in Dresden and at our ALTIS joint-venture with IBM in Essonnes, France, while in-house production of power logic wafers (with structure sizes of

Table of Contents

more than 250-nanometers) was largely carried out at our front-end manufacturing facilities in Kulim, Regensburg, and Villach.

Generally, we use foundries to provide flexibility in meeting demand, as well as managing investment expenditures. In recent years, we have enhanced our manufacturing cooperation with United Microelectronics Corporation (UMC), particularly with respect to leading-edge CMOS products for wireless communications down to 90-nanometer.

We have entered into a joint development agreement with IBM, Chartered Semiconductor and Samsung, to accelerate the move to 65-nanometer and below. We are currently qualifying 65-nanometer technology at several manufacturing partners and began to develop products based on 40-nanometer technology for which it is currently planned first to be manufactured at one of our manufacturing partners.

We continue with our development agreements with IBM and its development and manufacturing partners to the 32-nanometer generation. This agreement builds on the success of earlier joint development and manufacturing agreements. Starting with 65-nanometer technology, our advanced logic front-end manufacturing will be solely sourced from manufacturing partners, optimizing capital investment and business flexibility. Verified samples of 65-nanometer technologies are currently available. Volume production in 65-nanometer is scheduled to start in the second half of 2009.

We are continuing the ramp up of our new power-logic plant in the Kulim Hi-Tech Park in the north of Malaysia and plan to further increase our production capacity at that site. This will allow us to further expand our presence in the growing Asian market, as well as to strengthen our cost and competitive positions. We expect to ramp-up capacity at Kulim according to market demand. We expect that maximum capacity could reach approximately 100,000 wafer starts per month.

Back-end

We have a number of logic back-end facilities, located primarily in Asia. We also use assembly and test subcontractors to provide us with flexibility in meeting demand, as well as managing investment expenditures. For assembly services, we have further intensified our partnership with AMKOR Technology on leadless and flip-chip technologies.

We and Advanced Semiconductor Engineering Inc. (ASE) announced in November 2007 a partnership to introduce semiconductor packages with a higher integration level of package size, the Wafer-Level Ball Grid Array (WLB) technology, which achieves a 30 percent reduction of dimension compared to conventional (lead-frame laminate) packages. This partnership unites the technology developed by Infineon with the packaging know-how of ASE in a license model.

In August 2008, we, STMicroelectronics and STATS ChipPAC announced an agreement to jointly develop the next-generation of embedded Wafer-Level Ball Grid Array (eWLB) technology, based on our first-generation technology, for use in manufacturing future-generation semiconductor packages. This will build on our existing eWLB packaging technology, which we have licensed to our development partners. The new R&D effort, for which the resulting IP will be jointly owned by the three companies, will focus on using both sides of a reconstituted wafer to provide solutions for semiconductor devices with a higher integration level and a greater number of contact elements.

Manufacturing joint venture

In 1991, we entered into an arrangement with IBM, under which IBM manufactured DRAM products in its facility in Essonnes, France and we received a share of the production. Later we agreed with IBM to convert the Essonnes facility to the production of logic devices and to convert the existing production cooperation arrangement into a joint venture called ALTIS. In 2008, we owned 50 percent of the joint venture's shares plus one share and IBM owned the rest. Following an amendment in December 2005 we began to fully consolidate ALTIS whereby IBM's 50 percent ownership interest has been reflected as a minority interest. Our allocated percentage of the output of ALTIS was 90 percent in the 2008 fiscal year.

Table of Contents**Research and Development**

Research and development (R&D) is critical to our continuing success, and we are committed to maintaining high levels of R&D over the long term. The table below sets forth information with respect to our research and development expenditures for the periods shown:

Research and Development Expenditures

	For the years ended September 30,		
	2006	2007	2008
	(in millions, except percentages)		
Expenditures (net of subsidies received)	816	768	755
As a percentage of net sales	20%	19%	17%

Our R&D activities are concentrated in the areas of semiconductor based product and system development, as well as process technology. Major R&D activities range from the development of leading edge RF, analog and power circuits, complex digital system-on-chip solutions, high and low power discrettes, sensors, reusable IP-blocks, software blocks, CAD flow and libraries, and packaging technology to complex mobile phone system integration.

Our logic ICs generally utilize complex system-on-chip designs and require a wide variety of intellectual property and sophisticated design methodologies, to combine high performance with low power consumption. We believe that our range of intellectual property and methodologies for logic ICs, in particular our capability to integrate various ICs and complex software products, will enable us to continue to strengthen our position in the logic IC market. We view expertise in analog/mixed-signal devices and RF design as a particular competitive strength.

Our power ICs and discrete power transistors utilize a sophisticated co-design of circuits and technology procedures to optimize parameters like on-resistance, switching speed and reliability. We believe our expertise in all fields of power applications up to the highest voltage and current levels will enable us to retain a leading development position and help us to remain a leading supplier for power semiconductors.

Process technologies are another important focus of our R&D activities. We continuously develop our power technologies in order to support our number one position in the power market. Requirements for automotive and industrial applications, such as high-temperature, high switching power and reliability allow for differentiation through in-house R&D. For advanced logic technologies we are following a strategy of alliances with several partners and consortia to maintain a competitive technology roadmap at an affordable cost level. Our process technologies benefit from many modular characteristics, including special low-power variants, analog options and high-voltage capabilities.

Table of Contents***Locations***

Our research and development activities are conducted at locations throughout the world. The following table shows our major research and development locations and their respective areas of competence:

Principal Research and Development Locations

Location	Areas of Competence
Allentown, Pennsylvania, USA	IC, software and system development for wireless products
Bangalore, India	IC, software and system development for wireless, wireline, automotive and industrial products, CAD flow and library development
Bucharest, Romania	Power mixed-signal semiconductors, chip card ICs, RF IC development for wireless products
Dresden, Germany	Advanced technology development
Duisburg, Germany	IC and system development for wireless products, RF IC development, customer support for wireline products
Graz, Austria	Contactless systems, automotive power systems, sensor products
Linz, Austria	RF IC and software development for wireless and sensor products
Morgan Hill, California, USA	RF IC development for high power applications
Munich, Germany	Main product development site Technology integration, CAD flow, library development, IC, software and system development for wireline products, microcontrollers, ASICs with embedded DRAM, chip card ICs, automotive power and industrial products, process technology development
Nuremberg, Germany	Software and system development for wireless products
Regensburg, Germany	Package development, process technology development
Shanghai, China	System development for wireless products
Singapore	IC, software and system development for wireline, wireless and industrial products, package development
Sophia Antipolis, France	IC development for wireless products, library development, CAD flow
Villach, Austria	IC development for power semiconductor products, mixed signal IC development for automotive and communication products
Xi an, China	IC development for automotive and communication products

As of September 30, 2008, our research and development staff consisted of approximately 8,364 employees working in our R&D units throughout the world (including approximately 2,091 Qimonda employees), a net increase of approximately 25 from September 30, 2007 (including a net decrease of approximately 415 Qimonda employees). We have given particular emphasis in recent years to the expansion of our R&D resources in cost-attractive locations with good access to lead markets and lead customers. We believe that appropriate utilization of skilled R&D personnel in lower-cost locations will improve our ability to maintain our technical position while controlling expenses.

Intellectual Property

Our intellectual property rights include patents, copyrights, trade secrets, trademarks, utility models and designs. The subjects of our patents primarily relate to IC designs and process technologies. We believe that our intellectual property is a valuable asset not only to protect our investment in technology but also a vital prerequisite for cross licensing agreements with third parties.

Table of Contents

At September 30, 2008, the Infineon group (without Qimonda) owned more than 21,600 patent applications and granted patents (both referred to as patents below) in over 40 countries throughout the world. These patents belong to approximately 8,150 patent families (each patent family containing all patents originating from the same invention). We filed first patent applications for approximately 710 inventions during the 2008 fiscal year.

National and regional patent offices examine whether our patent applications meet the necessary requirements. Owing to the complex nature of our patent applications this examination process typically takes several years until grant of a patent.

It is common industry practice for semiconductor companies to enter into patent cross licensing agreements with each other. These agreements enable each company to utilize the patents of the other on specified conditions. In some cases, these agreements provide for payments to be made by one party to the other. We are a party to a number of patent cross licensing agreements, including agreements with other major semiconductor companies. We believe that our own substantial patent portfolio enables us to enter into patent cross licensing agreements on favorable terms and conditions. We are currently in patent cross licensing negotiations with several major industry participants. Depending on new developments, new products or other business necessities, we may initiate additional patent cross licensing agreements in the future.

Our success depends in part on our ability to obtain patents, licenses and other intellectual property rights covering our products and their design and manufacturing processes. To that end, we have obtained many patents and patent licenses and intend to continue to seek patents on our developments. The process of seeking patent protection can be lengthy and expensive, and there can be no assurance that patents will be issued from currently pending or future applications or that, if patents are issued, they will be of sufficient scope or strength to provide us with meaningful protection or a commercial advantage. In addition, effective copyright and trade secret protection may be limited in some countries or even unavailable.

Our competitors also seek to protect their technology by obtaining patents and asserting other forms of intellectual property rights. Third-party technology that is protected by patents and other intellectual property rights may be unavailable to us or available only on unfavorable terms and conditions. Third parties may also claim that our technology infringes their patents or other intellectual property rights, and they may bring suit against us to protect their intellectual property rights. From time to time, it may also be necessary for us to initiate legal action to enforce our own intellectual property rights. Litigation can be very expensive and can divert financial resources and management attention from other important uses. It is difficult or impossible to predict the outcome of most litigation matters, and an adverse outcome can result in significant financial costs that can have a material adverse effect on the losing party. For a description of ongoing disputes, see [Legal Matters](#) .

Strategic Alliances and Other Collaborations

As a part of our long-term strategy, we have entered into a number of strategic alliances with other leaders in the semiconductor industry, primarily in the areas of research and development for manufacturing process technologies and joint manufacturing facilities as well as cooperative product design and development.

R&D in advanced process technology nodes for wafer manufacturing is a particular focus for multi-party alliances. During the 2008 fiscal year, accordingly, we continued our technology agreements down to the 32/28-nanometer CMOS technology nodes with our alliance partners IBM, Chartered and Samsung (the ICIS alliance) as well as Freescale. Pooling of human and technological resources supports a high level of innovation coupled with mutual learning and fast feedback, which in turn increases efficiencies, improves economies of scale and reduces time to market for new products.

The 90-, 65- and 45-nanometer technologies developed to date through this alliance will be used for a broad range of systems including, for example, next-generation hand-held products. Future technologies

Table of Contents

are intended to solve real life problems in fields such as medicine, communications, transportation and security. Advanced technology nodes are intended to support energy efficiency, high performance and cost conscious solutions.

Since advanced products include digital, analog, RF and embedded memory circuitry, it is important for Infineon to stay involved in leading edge technology development in order to be able to bridge the requirements for wafer manufacturing and optimum design. This need is independent of our manufacturing strategy, whether in-house or outsourced.

New collaborations announced in the 2008 fiscal year

During the 2008 fiscal year, we announced a number of collaborations and partnerships, including the following:

To complement our cooperation on wafer technologies, we entered into a development alliance with STMicroelectronics and STATSChipPAC on next-generation embedded wafer level ball grid array technology. This packaging technology enables small form factor, heterogeneous integration of subsystems and systems in single packages. The cooperation is designed to pave the way to widespread adoption of this technology by printed circuit board manufacturers and assembly houses.

With respect to our core competence in the security and chip card business, we entered into new collaborations with Intel. One agreement concerns the development of optimized chip solutions for high-density SIM cards in the 4- to 64-megabit memory capacity range, for which we are contributing our expertise in security hardware. Pursuant to a second agreement, we are providing our Trusted Platform Module professional package software to fully support Intel's TPM1.2 hardware solutions. This package, fully compliant with TCG's Trusted Software Stack Work Group Specifications, will enable PC designers to take advantage of a cost effective, flexible and reliable security solution for Intel vPro technology, Intel Centrino processor technology and other fundamental business platforms.

We also entered into a collaboration agreement with PGP Corporation to increase and enhance security options. Together, we will initially provide a combined solution towards Trusted Platform Module provisioning and management in conjunction with PGP Whole Disk Encryption.

We signed a license agreement for Differential Power Analysis Countermeasures with Cryptography Research.

Based on our background in confidential data storage, smart cards and security controllers, we expanded our cooperation with the German Federal Ministry of the Interior on certification and identity documents.

In the USA we entered a cooperation with IBM on the technology and manufacturing of security solutions for the USA government, specifically USA passports.

We expanded our cooperation with IMEC on innovative design - technology interfaces in future technology nodes.

We signed a memorandum of understanding with the European Commission on its automotive safety initiative. This move adds momentum to eCall, an integrated, automatic accident alert system for automobiles. The system collects data from key safety components and transmits this data to an emergency call center along with location information supplied by a GPS navigation module.

Our subsidiary Comneon and Sonus Networks joined forces in developing, testing and provisioning advanced consumer-ready mobile services, including IP-voice for mobile networks and Voice Call Continuity (VCC), a

service that allows seamless roaming between operator controlled mobile and open WiFi networks.

Table of Contents

In order to strengthen our MEMS based business, we entered a cooperation with Hosiden on the development of silicon-based microphones. Hosiden is contributing its competence in electro-mechanics and acoustics as well as its market expertise, while we are providing our rugged microphone MEMS technology.

With respect to our CPE business, we entered into a cooperation with Jungo Ltd. to deliver production-ready carrier-grade reference designs for the multi-service residential gateway market. The partnership, currently based upon our ADSL2/2+ and VDSL solutions, enables customers to offer complete solutions for operator-specific products based on a pre-integrated, carrier-ready software platform from Jungo.

Qimonda

We currently hold a 77.5 percent interest in the memory products company Qimonda. We have announced our intention to reduce our interest in Qimonda to less than 50 percent and, accordingly, report the results of Qimonda as discontinued operations in our consolidated financial statements.

On December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. This proposed transaction is described under **Operating and Financial Review** **Recent Developments Related to Qimonda** .

Qimonda designs semiconductor memory technologies and develops, manufactures, and markets a variety of memory products with various packaging and configuration options, architectures and performance characteristics on a chip, component and module level.

Qimonda currently offers more advanced DRAM products for infrastructure graphics and consumer applications, as well as standard DRAM products for PCs, notebooks and workstations.

Principal Products	Principal Applications	Four Largest Customers in the 2008 Fiscal Year
Standard DRAM components (DDR, DDR2, DDR3)	Memory modules, components-on-mainboards, consumer devices (digital TV, set-top boxes, DVD recorders)	HP, Kingston, Microsoft, Sony
Personal system DRAM modules (Unbuffered DIMMs with and without ECC, SO-DIMMs, Micro-DIMMs)	Desktop computers, workstations, entry-level servers, notebook computers, sub-notebooks, ultra-mobile PCs	
Infrastructure DRAM modules (Registered DIMMs, FB-DIMMs, VLP-DIMMs)	Servers, Workstations, blade servers	
Networking, storage and industrial DRAM products	Networking, telecom and industrial equipment, storage	
Graphics (DDR2, GDDR3, GDDR5)	Graphic cards in desktop and notebook computers, game consoles	
Consumer (DDR1, DDR2)	Digital TV, set-top boxes, digital cameras, dvd recorders	

The global market for DRAM has experienced strong cyclicalities in the past and is expected to continue to do so in the future. Historically, the average price per bit of DRAM experienced an annual decrease of approximately 30 percent. Price and therefore revenue volatility depends on the relation between supply and demand, leading to strong price declines in times of oversupply and relative stability or even increases in times of shortage. However, visibility for both supply and demand is restricted and therefore market

Table of Contents

development is difficult to predict. The table below presents revenue and bit data as well as calendar year-over-year price-per-bit development for the DRAM market since 2002 (source: WSTS).

Calendar Year	2002	2003	2004	2005	2006	2007
DRAM market in billion	\$ 15	17	27	26	34	31
DRAM market in billion megabits	563	785	1,260	1,902	2,809	5,069
Year-over-year change average price per bit	(3)%	(23)%	3%	(37)%	(11)%	(51)%

In the 2002 calendar year, prices for Qimonda's DRAM products stabilized due to increased demand and consolidation within the industry following a substantial industry downturn and price decline in the 2001 calendar year. In the 2003 calendar year prices dropped again due to slow demand development. In the 2004 calendar year, prices remained flat. In the 2005 calendar year, prices declined more strongly than the historical average due to slow demand development especially in the first half of the year. During the 2006 calendar year, prices stabilized due to reduced growth in DRAM supply as some DRAM manufacturers focused capacity growth on NAND flash. In the 2007 calendar year, prices declined severely due to a strong increase in production volumes as a consequence of capacity increases, technology conversions and capacity conversions from NAND to DRAM by some competitors, following severe price erosion in the NAND flash area. In the 2008 calendar year, prices stabilized at low levels and recovered slightly in the first half but declined again in the quarter ending September 2008 due to continued oversupply in the DRAM industry.

DRAMs for Infrastructure, Graphics and Consumer Applications

Qimonda designs, manufactures and sells technologically advanced DRAM components and modules for use in servers, networking and storage equipment, including specialty DRAMs for use primarily in graphics applications, as well as in consumer applications.

Infrastructure Applications. Qimonda's current portfolio of DRAMs for use in servers, networking and storage equipment includes FB-DIMMs and DDR3 RDIMMs, which Qimonda believes serve as the most advanced memory used in high-end servers, and very-low-profile-DIMMs, intended for the blade server market. DRAM consumption in entry level servers is expected to see a 60 percent compound annual growth rate (CAGR) based on bits shipped from 2006 to 2011, according to iSuppli. Qimonda also provides customized modules to server manufacturers, in each case specifically designed to meet the individual customer's unique platform requirements. Qimonda expects the market for servers to grow substantially in the next few years, and Qimonda is currently engaged in the development of products it believes will address that growth. For example, Qimonda is developing new generations of standard DRAM with 2 gigabits and 4 gigabits of capacity for use in future IT infrastructure applications.

Graphics Applications. Qimonda offers a broad portfolio of graphics DRAMs that support applications with performance ranging from entry level to very advanced. Due to their speed, low power consumption and limited heat generation, Qimonda's graphics DRAM components are used in game consoles, graphics cards and PC and notebook computers. In some cases, Qimonda makes customized products for use in entertainment applications, including game consoles and imaging devices. Qimonda believes that the trend toward the extensive use of sophisticated graphics applications will result in strong growth in high performance graphics systems, which it believes will in turn drive the demand for its graphics DRAM products.

Consumer Applications. In the 2008 fiscal year, Qimonda also offered a broad range of DRAM products for consumer applications. As part of the repositioning of Qimonda, the company has decided to focus mainly on products for infrastructure and graphics applications going forward and as such will reduce the number of applications which

will be supported based on the more focused product portfolio. Demand for consumer DRAM products is often less volatile, and their prices are relatively steadier compared to other standard DRAM products.

Table of Contents

Mobile Applications. As part of the repositioning of Qimonda, the company has decided to focus mainly on products for infrastructure and graphics applications going forward and as such will reduce its support of mobile applications in the future.

Standard DRAMs for PC, Notebook and Workstation Applications

In addition to DRAMs for infrastructure, graphics and consumer applications, Qimonda offers a portfolio of standard DRAM products that provide a variety of speeds, configurations and densities suited to particular end uses. In the 2008 fiscal year, Qimonda sold the majority of its standard DRAM products for use in PCs and workstations to desktop and notebook computer manufacturers and to distributors who sell DRAMs to smaller OEMs and contract manufacturers. Qimonda's standard modules, including Unbuffered DIMMs and SO-DIMMs, are used primarily for PCs and notebooks, while its more specialized modules such as High-Density SO-DIMMs and Micro-DIMMs are typically used in high-end notebook computers and sub-notebooks. Qimonda intends to invest in technology development and anticipates playing an active role in the development of future DRAM architectures, including third-generation DDR, or DDR3.

As part of the repositioning of Qimonda, it decided to reduce its exposure to the PC market and has sold or reduced capacities for DRAM products for PC applications.

Other Products

In the beginning of the 2007 fiscal year, Qimonda ramped down the production of its flash products and converted the capacity to DRAM, as had been decided in the prior fiscal year following the significant price decline for data flash memories. In the 2008 fiscal year, Qimonda has reduced its engagement in technology development for non-volatile memories to a basic research level.

Qimonda continues to develop non-volatile memory technologies based on alternative technology platforms, including MRAMs, PCRAMs and CBRAMs.

In the 2008 fiscal year, Qimonda sold a small volume of embedded memories, which are systems-on-a-chip designed for special applications. The production and sales of these products had been phased out by the end of the 2008 fiscal year.

Sales

Qimonda makes memory-product sales primarily through direct sales channels and makes use of distributors in order to ensure the best possible customer coverage. It focuses its principal sales and marketing efforts on the technology leaders in each of the DRAM markets it serves. We believe Qimonda has strong customer relationships and that its customers, many of which are leaders in their respective fields, provide Qimonda with special insights into the current state of their respective markets. Qimonda's engineering experts work directly with its customers to optimize products towards each of their specific needs.

Qimonda's regional sales teams are located in Europe, North America, Asia/Pacific and Japan, and are supported by headquarters staff in Germany. These regional sales centers enable Qimonda to bring its business to its customer base and to provide local contact and support to the teams in those regions.

Qimonda's marketing teams work closely with its customers and with its sales and R&D organizations. The product marketing groups help plan Qimonda's product roadmap, to enable it to develop and manufacture products that meet customers' changing requirements.

Customers

Qimonda's customers include the world's largest suppliers of computers and electronic devices. Qimonda's current principal customers include major computing OEMs, or OEMs in the PC and server markets, including HP, Dell, IBM, Sun Microsystems and Sony. To expand customer coverage and breadth,

Table of Contents

Qimonda also sells a wide range of products to memory module manufacturers that have diversified customer bases, such as Kingston, and to a number of distributors. In the area of graphics applications, Qimonda supplies customers with a strong focus on enabling these applications, such as nVidia and AMD, and customers who are active in the game console market, such as Microsoft, Sony and Nintendo. Qimonda believes that having a close relationship with these customers can benefit it in the development of future memory generations by making it easier to develop memory solutions for future end applications and improve its product designs. In the 2008 fiscal year Qimonda also supplied customers in the area of consumer and mobile applications. The company has recently decided to reduce its product support in these areas and to focus its product development efforts on its core strengths in products for infrastructure and graphics applications in order to reduce costs in R&D and manufacturing complexity.

Competition

Qimonda's principal competitors include Elpida Memory, Hynix Semiconductor, Micron Technology, Nanya Technology and Samsung Electronics.

Manufacturing

The following table shows selected key information with respect to Qimonda's current major manufacturing facilities:

Qimonda Manufacturing Facilities in 2008

	Year of commencement of first production line	Principal products or functions
Front-end facilities – wafer fabrication plants		
Dresden 300-millimeter, Germany	2001	DRAM
Richmond 200-millimeter, Virginia ⁽¹⁾	1998	DRAM
Richmond 300-millimeter, Virginia	2005	DRAM
Back-end facilities – assembly and final testing plants		
Dresden, Germany ⁽²⁾	1996	DRAM components and modules
Malacca, Malaysia ⁽³⁾	1973	DRAM components and modules
Johor, Malaysia	2008	DRAM modules
Porto, Portugal	1997	DRAM components and modules
Suzhou, China ⁽⁴⁾	2004	DRAM components and modules

(1) On October 13, 2008, Qimonda announced plans to reposition itself in light of the severe downturn in the DRAM industry. As part of the related restructuring plan, it decided to ramp down manufacturing at the 200-millimeter facility in Richmond, Virginia by the end of the second quarter of the 2009 fiscal year.

(2) As part of the repositioning of Qimonda, it was decided to close the back-end manufacturing at Dresden by March 2009.

(3) Module production was terminated in Malacca in October 2008 with production being transferred to Johor. The facility in Malacca has been sold and transferred to Infineon in November 2008.

(4) Qimonda Technologies Suzhou Co. Ltd., Qimonda's joint venture with CSVG.

Front-end

The structure size of the memory products of Qimonda is as small as 65-nanometers and Qimonda is currently developing production processes for memory products with structure sizes as small as 46-nanometers.

Table of Contents

In the 2008 fiscal year, Qimonda focused on the phase out of less productive 200-millimeter and 300-millimeter wafer capacities and on technology conversion of its DRAM manufacturing on 300-millimeter diameter wafers. As a consequence of the DRAM market downturn and in an effort to reduce capacities with less competitive wafer size or technology generation, Qimonda has phased out manufacturing at its foundry partner SMIC on 200-millimeter and 300-millimeter wafers in the 2008 fiscal year. As part of its repositioning program, Qimonda has sold its stake in Inotera, its former joint venture with Nanya, to Micron. Available capacity at Inotera will ramp down over an eight month period until the end of the 2009 fiscal year. Qimonda also decided to ramp down its 200-millimeter capacity at Richmond, Virginia by end of the second quarter of the 2009 fiscal year. Qimonda's 300-millimeter facility at Richmond ramped up production to a capacity of approximately 39,000 wafer starts per month by September 2008. The maximum capacity of this facility is expected to amount to 50,000 wafer starts per month. Qimonda's foundry and development partner Winbond has converted the majority of its 300-millimeter facility in Taiwan to the 75-nanometer technology by the end of the 2008 fiscal year and is preparing to introduce the next generation 65-nanometer Buried Wordline technology early in the 2009 calendar year. Qimonda started commercial production of its 65-nanometer Buried Wordline technology in October 2008 and achieved first yields on its next generation 46-nanometer Buried Wordline technology. The focus on 300-millimeter production and the conversion to the 65-nanometer and 46-nanometer technologies should substantially reduce Qimonda's overall per-unit cost for memory chips.

In April 2006, Qimonda entered into an agreement with Infineon for the production of wafers in the Dresden 200-millimeter fab. Supply to Qimonda from this facility ended in the third quarter of the 2008 fiscal year.

Back-end

As part of the repositioning of Qimonda, it decided to ramp down manufacturing at its back-end facility at Dresden, Germany by March 2009. Qimonda has back-end operations at Porto, Portugal and Johor, Malaysia. Qimonda has transferred its module manufacturing from its back-end site at Malacca, Malaysia to Johor. The facility in Malacca has been sold and transferred to Infineon in November 2008. In addition, Qimonda sources back-end capacities from its joint venture Qimonda Suzhou, China and uses third party subcontractors for part of the back-end volumes to balance the load in its own fabs. Package development was mainly done at Dresden and will be transferred to Porto. The back-end sites in Porto and Suzhou focus on volume manufacturing of components and the site at Johor focuses on the manufacturing of DRAM modules.

Qimonda Fab Cluster System

Qimonda has structured and organized its memory fabrication facilities worldwide in its so-called fab cluster. Through this organizational approach, Qimonda seeks to use best processes to maximize quality and consistency across facilities. This allows it to ship many products from multiple sites, and therefore supply products to anywhere in the world from multiple facilities. In addition, by locating facilities in different areas, Qimonda can also recruit talent globally. The fab cluster includes Qimonda's front-end facilities in Dresden and Richmond and corresponding back-end sites in Porto and Johor, as well as its back-end manufacturing joint venture Qimonda Suzhou and its front-end foundry partner Winbond.

Qimonda Joint Ventures and Partnerships

CSVC. Qimonda Technologies (Suzhou) Co., Ltd. is Qimonda's consolidated joint venture with China-Singapore Suzhou Industrial Park Venture Co., Ltd. (CSVC) in Suzhou, China, which has constructed a back-end facility for the assembly and testing of Qimonda's products. The joint venture agreement was entered into in July 2003 and has an initial term of 50 years. It can generally be terminated upon material breach by the other party, a party's bankruptcy or insolvency and various other events relating to a party's financial condition. The facility officially opened in September 2004 and is scheduled to have capacity of up to one billion chips per year. The facility will be ramped in a

number of stages as dictated by growth and trends in the global semiconductor memory market. Qimonda is required to

Table of Contents

purchase the entire output of the facility. Infineon and Qimonda have invested \$241.5 million in the venture. Qimonda holds 72.5 percent of the outstanding capital stock of Qimonda Suzhou, with CSVC owning the remaining 27.5 percent. Qimonda has the option to acquire the remaining CSVC stake at the nominal investment value plus accrued and unpaid return. The joint venture intends to arrange external financing for any further investment required to purchase additional equipment. There can be no assurance that this external financing can be obtained at favorable terms or at all.

SMIC. In December 2002, we entered into a Product Purchase and Capacity Reservation Agreement, as most recently amended in September 2008, with Semiconductor Manufacturing International Corporation (SMIC), a Chinese foundry. As amended, this agreement provides Qimonda access to additional DRAM manufacturing capacity. Under the terms of this agreement, SMIC agreed to manufacture, and Qimonda agreed to purchase, up to 20,000 wafers per month at SMIC 's 200-millimeter manufacturing facility in Shanghai at least until 2007 and up to 15,000 wafers per month at SMIC 's 300-millimeter manufacturing facility in Beijing at least until 2009. The agreement remains in effect until December 31, 2010 but due to unfavorable market conditions the capacity had been reduced to zero wafer starts. Qimonda has the unilateral right to terminate this agreement in the event that one of its competitors acquires 50 percent of SMIC 's voting shares. In addition, either party may terminate the agreement upon material breach by the other party of any obligation under this or the ancillary know-how transfer agreement or upon bankruptcy or insolvency of the other party.

Winbond. In May 2002, we entered into a Product Purchase and Capacity Reservation Agreement with Winbond, a Taiwanese foundry. This agreement provides Qimonda access to additional DRAM production capacity. Under the terms of this agreement, Winbond agreed to manufacture, and Qimonda agreed to purchase, up to 19,000 wafer starts per month from Winbond 's 200-millimeter production facility in Hsinchu, Taiwan until 2007.

In August 2004, we entered into an extended Product Purchase and Capacity Reservation Agreement, as amended in August 2006, with Winbond. This agreement gives Qimonda access to additional DRAM production capacity of up to 15,000 wafers per month in Winbond 's 300-millimeter manufacturing facility in Taiwan until 2009. Qimonda has exceeded this level from time to time. Under the terms of this agreement Qimonda agreed to provide its 80-nanometer DRAM trench technology to Winbond 's 300-millimeter manufacturing facility and Winbond agreed to manufacture DRAMs for computing applications using this technology exclusively for Qimonda.

In June 2007, Qimonda signed agreements with Winbond, as amended in April 2008, to expand its existing cooperation with Winbond and its reservation of capacity at Winbond 's facility for up to 24,000 300-millimeter wafer starts per month. Under the terms of the agreement, Qimonda will provide its 75-nanometer DRAM trench technology and its 65-nanometer DRAM Buried Wordline technology to Winbond 's 300-millimeter manufacturing facility. In return, Winbond will manufacture DRAMs for computing applications using these technologies exclusively for Qimonda.

Each agreement remains in effect until the last shipment of, and payment for, products manufactured under the agreement unless it is earlier terminated for breach.

Inotera. We entered into agreements with Nanya relating to a strategic cooperation in the development of DRAM products and assigned these agreements to Qimonda. We also established a joint venture, Inotera Memories, with Nanya.

On October 13, 2008, Qimonda announced that it had reached an agreement to sell its stake in Inotera to Micron. The transaction was completed on November 26, 2008. The capacity available for Qimonda at Inotera will ramp down over an eight month period following the close of the transaction. With the close of the transaction, the joint development of 58-nanometer trench technology has also officially terminated.

Table of Contents***Qimonda Research and Development***

Qimonda's R&D activities are broadly divided into two major steps. First, Qimonda develops a manufacturing process technology and a design platform in conjunction with a lead product. Subsequently, the rest of the product portfolio is developed as follower products that utilize the design platform established in the first step. The goal of Qimonda's technology development efforts is to support its product designers to meet the customer requirements for memory products regarding high performance, low power consumption and small form factors (i.e., structure sizes) at a competitive cost level.

In the area of memory process technology, Qimonda started commercial production of DRAM products based on its new 65-nanometer Buried Wordline technology in October 2008. Qimonda terminated the partnership with Nanya and engaged in a new technology development partnership with Elpida for the 40-nanometer and 30-nanometer technology generations. This strategic development alliance with Elpida allows Qimonda to share development costs and resources. The development activities with Elpida are currently on hold as both companies focus on next generation 50-nanometer/46-nanometer development activities. All of Qimonda's memory technology development takes place at its memory technology development center in Dresden, Germany.

Qimonda's product development activities focus on those specialized and advanced memory products that it believes provide more stable and higher selling prices than standard DRAMs. Following Qimonda's repositioning program, the company intends to focus on a reduced number of product designs going forward and specifically focus on products for infrastructure and graphics applications where Qimonda already has strong positions at its customers and is well known as leading innovator in the industry. Qimonda defines its products in close cooperation with lead customers and industry partners and is actively driving new standards and participating in standardization committees such as the Joint Electron Device Engineering Council (JEDEC). Qimonda's worldwide operating Application Engineering team helps its customers to design in Qimonda products into their systems.

Locations

Going forward, Qimonda intends to focus its R&D at three major locations in Dresden and Munich, Germany and in Xi'an, China. As part of its repositioning and restructuring programs, Qimonda has been or is ramping down development efforts at its design centers in Burlington, Vermont and Raleigh, North Carolina as well as for Flash products in Padua and Milan, Italy. The following table shows Qimonda's major research and development locations and their respective areas of competence:

Principal Qimonda Research and Development Locations

Location	Areas of Competence
Dresden, Germany	DRAM technology development
Munich, Germany	Computing and graphic DRAMs, emerging memory research
Xi'an, China	Infrastructure DRAMs

Qimonda Strategic Alliances

In order to achieve and maintain technological leadership in the DRAM market and to share start-up costs inherent in developing successive generations of memory products, Qimonda has entered into a number of strategic alliances over the years with selected partners for research and development and manufacturing activities in relation to memory

products.

In November 2002, we entered into agreements with Nanya to establish a strategic cooperation in the development of DRAM products and to form Inotera, a joint venture to construct and operate a 300-millimeter manufacturing facility with two manufacturing modules in Taiwan. Under the terms of the initial development agreement, we have developed 90- and 75-nanometer DRAM technologies. In

Table of Contents

September 2005, we entered into another agreement with Nanya for the joint development of advanced 58-nanometer production technologies for 300-millimeter wafers.

On October 13, 2008, Qimonda announced that it has reached an agreement to sell its stake in Inotera to Micron. The transaction was completed on November 26, 2008. The capacity available for Qimonda at Inotera will ramp down over an eight month period following the close of the transaction. With the close of the transaction, the joint development of 58-nanometer trench technology has also officially terminated.

On June 11, 2008, Qimonda announced that it has signed an agreement with Elpida to jointly develop DRAM technologies for the 40-nanometer and 30-nanometer generations. Development will be conducted at the technology R&D centers in Dresden, Germany and Hiroshima, Japan. The development activities with Elpida are currently on hold as both companies focus on next generation 50-/46-nanometer development activities.

Acquisitions and Dispositions

Reflecting our commitment to achieve profitability, we continued to dispose of non-core assets in the 2008 fiscal year. In addition, we also continued to strengthen our businesses through selective acquisitions. The principal transactions completed in the 2008 fiscal year were as follows:

Acquisition of Mobility Products Business of LSI

On October 24, 2007, we completed the acquisition of the mobility products business of LSI for cash consideration of 316 million (\$450 million) plus transaction costs and a contingent performance-based payment of up to \$50 million in order to further strengthen our activities in the field of communications. The contingent performance-based payment is based on the relevant revenues in the measurement period following the completion of the transaction and ending December 31, 2008. The mobility products business designs semiconductors and software for cellular telephone handsets. The business acquired consists mainly of mobile radio baseband processors and platforms that complement our existing portfolio.

Sale of 40 percent of High Power Bipolar business

In September 2007, we entered into a joint venture agreement with Siemens, pursuant to which we contributed all assets and liabilities of our high power bipolar business (including licenses, patents, and front-end and back-end production assets) into a newly formed legal entity called Infineon Technologies Bipolar GmbH & Co. KG (Bipolar) and Siemens subsequently acquired a 40 percent interest in Bipolar for 37 million. We and Siemens already had ongoing technology cooperation, and this joint venture was a logical next step in that partnership to secure our international competitiveness in this area. The transaction closed in the first quarter of the 2008 fiscal year.

Sale of Hard Disk Drive (HDD) IC Business

In March 2008, we and LSI entered into an agreement pursuant to which LSI acquired our HDD business. The HDD business designs, manufactures and markets semiconductors for HDD devices. The transaction closed in April 2008, with total proceeds of 60 million (\$95 million) in cash.

Acquisition of Primarion, Inc.

In April 2008, we acquired Primarion, Inc. (Primarion) for cash consideration of 32 million (\$50 million) plus a contingent performance-based payment of up to \$30 million. Primarion designs, manufactures and markets digital power ICs for computing, graphics and communication applications. The company's power architecture addresses the

need for adaptive local intelligent control over power delivery to optimize performance and minimize power consumption. Combining power conversion and power management on a single chip simplifies system design and reduces costs. With this acquisition, we strive to broaden our product portfolio in the area of digital power management ICs and to become a leader in this fast growing market.

Table of Contents

Sale of Bulk Acoustic Wave (BAW) Filter Business

In June 2008, we entered into a definitive agreement with Avago Technologies Ltd. (Avago) to sell our bulk acoustic wave filter business (BAW) for approximately 21 million in cash. BAW develops bulk acoustic wave filters for cellular duplexers and GPS applications. The transaction closed in August 2008.

Employees

We employed a total of 29,119 employees as of September 30, 2008 (excluding 12,224 Qimonda employees). For a further description of our workforce by location and function over the past three years, see Operating and Financial Review Employees .

A significant percentage of our employees, especially in Germany, are covered by collective bargaining agreements determining remuneration, working hours and other conditions of employment, and are represented by works councils. Works councils are employee-elected bodies established at each location in Germany and also at the parent company-wide level (Infineon Technologies AG). Furthermore, works councils exist at our subsidiaries in Austria and France (including ALTIS). In Germany, works councils have extensive rights to notification and of codetermination in personnel, social and economic matters. Under the German Works Constitution Act (*Betriebsverfassungsgesetz*), the works councils must be notified in advance of any proposed employee termination, they must confirm hirings and relocations and similar matters, and they have a right to codetermine social matters such as work schedules and rules of conduct. Management considers its relations with the works councils to be good. The members of the senior management of Infineon Technologies AG are represented by a senior management committee (*Sprecherausschuss*).

In October 2005, the relevant union organized a work stoppage in connection with our plans to shut down our Munich-Perlach facility. This work stoppage lasted one week and was ended following an agreement to financially compensate those employees whose contracts were not continued following the closing of this manufacturing facility in March 2007. Other than this incident, we have not experienced any labor disputes resulting in major work stoppages in the last three fiscal years.

Within the scope of Infineon's IFX10+ cost-reduction program, adjusting Infineon's manpower capacities has proven to be inevitable. Approximately 10 percent of Infineon Logic's worldwide workforce is expected to be impacted by IFX10+.

Since the primary objective is to avoid redundancies for operational reasons, and as a first step towards improving business results as quickly as possible, Infineon has offered a limited-term, voluntary severance bonus based on a voluntary severance agreement for German locations except Dresden. At the same time, Infineon has entered into negotiations with the central works council on a reconciliation of interests and a social plan. Human resources measures resulting from these agreements may include, for example, severance pay, partial retirement arrangements, internal transfer, reductions of temporary and other external staff.

Legal Matters

Pending Matters

We and Qimonda are the subject of a number of governmental investigations and civil lawsuits which are described in detail in note 34 to our consolidated financial statements, included elsewhere in this annual report.

In addition, we are involved in a dispute with Dr. Ulrich Schumacher, our former CEO. In March 2006, Dr. Schumacher filed a lawsuit against us alleging that three statements made by the Chairman of our Supervisory

Board in the media were incorrect and applying for a declaratory judgment that Dr. Schumacher was entitled to damages. That lawsuit is still pending.

Table of Contents

Accruals and the Potential Effect of these Lawsuits on Our Business

Liabilities related to legal proceedings are recorded when it is probable that a liability has been incurred and the associated amount can be reasonably estimated. Where the estimated amount of loss is within a range of amounts and no amount within the range is a better estimate than any other amount, the minimum amount is accrued. As of September 30, 2008, Infineon Logic had accrued liabilities in the amount of \$37 million related to the DOJ and European antitrust investigations and the direct and indirect purchaser litigation and settlements described in note 34 to our consolidated financial statements as well as for legal expenses for the DOJ related and securities class action complaints. In addition, as of September 30, 2008, Qimonda had accrued \$36 million in connection with these matters. As additional information becomes available, the potential liability related to these matters will be reassessed and the estimates revised, if necessary. These accrued liabilities would be subject to change in the future based on new developments in each matter, or changes in circumstances, which could have a material adverse effect on our financial condition and results of operations.

An adverse final resolution of the antitrust investigations or related civil claims or the securities class action lawsuits described in note 34 to our consolidated financial statements could result in significant financial liability to, and other adverse effects on, us, which would have a material adverse effect on our results of operations, financial condition and cash flows. In each of these matters we are continuously evaluating the merits of the respective claims and defending ourselves vigorously or seeking to arrive at alternative resolutions in our best interest, as we deem appropriate. Irrespective of the validity or the successful assertion of the claims described above, we could incur significant costs with respect to defending against or settling such claims, which could have a material adverse effect on our results of operations, financial condition and cash flows.

We are subject to various additional lawsuits, legal actions, claims and proceedings related to products, patents and other matters incidental to our businesses. We have accrued a liability for the estimated costs of adjudication or settlement of various asserted and unasserted claims existing as of the balance sheet date. Based upon information presently known to management, we do not believe that the ultimate resolution of such other pending matters will have a material adverse effect on our financial position, although the final resolution of such matters could have a material adverse effect on our results of operations or cash flows in the period of settlement.

Environmental Protection and Sustainable Management

The Infineon Integrated Management Program for Environment, Safety and Health (IMPRES) is a dynamic framework integrating our safety, health, and environmental protection processes, strategy, and objectives, using high standards globally. IMPRES is certified according to OHSAS 18001 and EN ISO 14001. The integration of both standards enables synergies throughout our business. IMPRES is designed to minimize or eliminate the possible impact of our manufacturing processes on the environment, our employees and third parties.

Hazardous substances or materials are to a certain extent necessary in the production of semiconductors. However, most of our processes are carried out in closed loops and systems that eliminate the impact of hazardous substances or materials on our employees' health and the environment. We regularly test and monitor employees whose work may expose them to hazardous substances or materials, in order to detect any potential health risks and to take appropriate remedial measures by an early diagnosis. As part of IMPRES, we train our employees in the proper handling of hazardous substances. We have introduced a harmonized process for risk assessment at the relevant sites.

Where we are not able to eliminate adverse environmental impact entirely, we aim to minimize the impact. For example, we need to utilize PFCs (perfluorinated compounds) as etching agents in the production of semiconductors. As early as 1992, we started to install exhaust air filter systems to reduce PFC emissions. We are signatories to the Memorandum of Agreement, a voluntary commitment by the European Semiconductor Industry which has the goal of

reducing overall PFC emissions by 2010 by approximately 10 percent from the emission level of 1995, calculated in CO₂ equivalents. We have signed

Table of Contents

a similar commitment for Germany, with a normalized target of 8 percent emission reduction on the basis of CO₂ equivalents, which is on track. With our European sites we achieved our European reduction target by the end of calendar year 2007.

We believe that we are in substantial compliance with environmental as well as health and safety laws and regulations. There is, nevertheless, a risk that we may become the subject of environmental, health or safety liabilities or litigation. Environmental, health, and safety claims or the failure to comply with current or future regulations could result in the assessment of damages or imposition of fines against us, suspension of production or a cessation of operations. Significant financial reserves or additional compliance expenditures could be required in the future due to changes in law or new information regarding environmental conditions or other events, and those expenditures could adversely affect our business or financial condition.

National legislation enacted pursuant to European Commission Directive 2002/96/EC creates significant obligations regarding the collection, recovery and disposal of waste electrical and electronic equipment. This directive obligates manufacturers to finance the collection, recovery and disposal of such products at the end of their life cycle. The end-of-life obligations may affect us as suppliers to electrical and electronic equipment producers and as producers of electronic equipment. Because the directive is currently under revision, and because a number of statutory definitions and interpretations remain unclear and are still pending, the consequences for our company cannot currently be determined in detail. As a result, we are not able at this time to estimate the amount of additional costs that we may incur in connection with this legislation.

Since July 1, 2006, another relevant European Commission Directive, 2002/95/EC, has restricted the use of lead and other hazardous substances in electrical and electronic equipment. Because of this directive, ongoing compliance expenditures could be required in the future. This directive is currently under revision, which could result in additional adverse impacts on our business.

A further European Directive, 2000/53/EC, restricts the use of hazardous substances in vehicles. Because the directive has been amended and further revision is foreseen, the impact for our company cannot currently be determined in detail.

Directive 2005/32/EC on the eco-design of Energy-using Products establishes ecologically sound development for electrical and electronic devices. It also provides for the possibility that manufacturers of components and sub-assemblies may be subject to specific information requirements regarding environmentally relevant product characteristics. Implementing measures and possible market requirements are not yet fully defined. As a result, we are not able at this time to estimate the amount of additional costs that we may incur in connection with this legislation.

A European Union regulatory framework, called REACH, dealing with the registration, evaluation, authorization and restriction of chemicals, became effective on June 1, 2007. Subsequent obligations will become effective in stages over the next few years. This regulation could have a considerable impact not only on producers and importers of chemical substances, but also on downstream users like the semiconductor industry. The availability of chemical substances could be significantly reduced in the European Union, which could have a negative impact on our production as well as research and development activities. We are in close contact with our suppliers and consider ourselves prepared according to the current status of REACH obligations. However, we cannot exclude the possibility of significant future costs in connection with this regulation.

The European Commission is considering restrictions on the use of PFOS (Perfluorooctanyle sulphonate) in the EU. PFOS is an important constituent of key chemicals used in the semiconductor industry. Any restriction affecting its use may adversely impact our production and cost position.

The Chinese government restricts the use of lead and other hazardous substances in electronic products. Because neither all implementing measures nor the schedule of affected products are in place, the consequences to us cannot currently be determined. As a result, we are not able to estimate the impact, including the additional costs, in connection with these regulations.

Table of Contents

Similar regulations on substance bans are being established in various countries of the world. We are not able at this time to estimate the impact, including the amount of additional costs that we may incur, in connection with these possible regulations.

Because the damage and loss caused by fire, natural hazards, supply shortage, or other disturbance at a semiconductor facility or within our supply chain at customers as well as at suppliers can be severe, we have constructed and operate our facilities in ways that minimize the specific risks and that enable a quick response if such an event should occur. We expect to continue to invest in prevention and response measures at our facilities.

Because some of our facilities, including some of those of our joint ventures, are located close to or shared with those of other companies, we may need to respond to certain claims and certain liabilities relating to environmental issues, such as contamination, not entirely originating from our own operations.

Real Estate

We own approximately 2.5 million square meters of land at Cegled (Hungary), Dresden, Neubiberg, Regensburg and Warstein (Germany), Essonnes (France), Horten (Norway) and Villach (Austria). This includes approximately 1.2 million square meters of land for Qimonda facilities at Dresden (Germany), Porto (Portugal) and Richmond (Virginia, USA).

Furthermore, we own approximately 1,115,000 square meters of building space at Batam (Indonesia), Cegled (Hungary), Dresden, Regensburg and Warstein (Germany), Essonne (France), Horten (Norway), Kulim and Malacca (Malaysia), Singapore (Singapore), Villach (Austria) and Wuxi (PR China). This includes approximately 398,000 square meters of building space for Qimonda facilities at Dresden (Germany), Malacca and Senai (Malaysia) Porto (Portugal), Richmond (Virginia, USA) and Suzhou (PR China).

In addition, we have long-term rental and lease arrangements covering approximately 1.2 million square meter of land at Batam (Indonesia), Kulim and Malacca (Malaysia), Neubiberg and Duisburg (Germany), Singapore (Singapore), Wuxi (PR China). This includes approximately 0.3 million square meters of land for Qimonda facilities at Malacca and Senai (Malaysia) and Suzhou (PR China).

Furthermore we have long-term rental and lease arrangements covering approximately 422,000 square meters of building space in various locations in Asia Pacific, Europe and North America. This includes 90,000 square meters of building space for Qimonda facilities. We believe that these properties are rented or leased on ordinary market terms and conditions.

Peter Bauer was appointed our Chief Executive Officer effective June 1, 2008. From 2005 to 2008, Mr. Bauer served as head of our Automotive, Industrial & Multimarket Business Group and was responsible for the Central Sales Functions. From the formation of Infineon Technologies AG in 1999 until 2005, he served as our Executive Vice President and Chief Sales and Marketing Officer. He was President and Chief Executive Officer of Siemens Microelectronics, Inc. from 1998 to April 1999. From 1997 to 1999, Mr. Bauer was President of Sales and Solution Centers for the Siemens Semiconductor Group. He began his career with the Siemens Semiconductor Group in 1986 as a development engineer. Mr. Bauer holds a degree in electrical engineering from the Munich Technical University.

Dr. Marco Schröter was appointed as a Member of the Management Board and Chief Financial Officer effective April 1, 2008. He was previously Chief Financial Officer at Schenker AG, Essen, where he was responsible for accounting, finance, controlling, risk management and purchasing. From 1994 to 2002, he held several positions, including Head of Central Controlling, at Stinnes AG, Mühlheim. Dr. Schröter holds a degree in business administration and received his Ph.D. from Saarland University in 1994.

Prof. Dr. Hermann Eul was appointed Deputy Executive Vice President of our Management Board as of August 2005 and subsequently Executive Vice President as of December 1, 2006. Until 1999 he was General Manager of the Digital TeleCom and Data Com ICs operations at Siemens. When Infineon was formed, he took over the Wireless Baseband and Systems Business Group as Vice President and General Manager. From 2001 to 2002 he was responsible for Security & Chip Card ICs operations as Chief Executive Officer. In 2003 he was appointed as full Professor and Faculty Chair for RF-Technology and Radio-Systems at Hanover University. In 2004 he returned to Infineon where he first co-managed the Wireline Communications segment as Senior Vice President and then, following a reorganization, became Executive Vice President and General Manager of the Communication Solutions segment. Professor Eul studied electrical engineering and has a doctorate in engineering.

Dr. Reinhard Ploss was appointed Executive Vice President and Head of Operations effective June 1, 2007. Dr. Ploss joined Siemens in 1986 as a process engineer. In 1996 he took over the Power Semiconductor business unit, focusing

on development and manufacturing. In 1999, he was appointed President of eupec GmbH Co. KG. In 2000, Dr. Ploss became head of the Automotive & Industrial segment, which at the time consisted of power semiconductors, electric drives, automotive applications and the microcontroller business unit. In 2005, he assumed responsibility for manufacturing, development and operational management in the Automotive, Industrial & Multimarket segment.

The members of our Management Board, individually or in the aggregate, do not own, directly or indirectly, more than 1 percent of our company's outstanding share capital.

The business address of each of the members of our Management Board is Infineon Technologies AG, Am Campeon 1-12, D-85579 Neubiberg, Germany.

Table of Contents**Overview of Corporate Governance Structure**

In accordance with the German Stock Corporation Act (*Aktiengesetz*), our company has a Supervisory Board and a Management Board. The two boards are separate and no individual may simultaneously exercise functions or serve as a member of both boards. The Management Board is responsible for managing our business in accordance with applicable laws, our Articles of Association and the rules of procedure of the Management Board. It represents us in our dealings with third parties. The Supervisory Board appoints and removes the members of the Management Board and oversees the management of our company but is not permitted to make management decisions.

In carrying out their duties, members of both the Management Board and Supervisory Board must exercise the standard of care of a prudent and diligent businessman, and they are liable to us for damages if they fail to do so. Both boards are required to take into account a broad range of considerations in their decisions, including the interests of our company and its shareholders, employees and creditors. The Management Board is required to respect the shareholders' rights to equal treatment and equal information.

The Supervisory Board has comprehensive monitoring functions. To ensure that these functions are carried out properly, the Management Board must, among other things, regularly report to the Supervisory Board with regard to current business operations and future business planning. The Supervisory Board is also entitled to request special reports at any time. The Management Board is required to ensure appropriate risk management within our company and must establish an internal monitoring system.

As a general rule under German law, a shareholder has no direct recourse against the members of the Management Board or the Supervisory Board in the event that they are believed to have breached a duty to our company. Apart from insolvency or other special circumstances, only our company has the right to claim damages from members of either board. We may waive these damages or settle these claims only if at least three years have passed and if the shareholders approve the waiver or settlement at the shareholders' general meeting with a simple majority, provided that opposing shareholders do not hold, in the aggregate, one-tenth or more of the share capital of our company and do not have their opposition formally noted in the minutes maintained by a German notary.

Supervisory Board

Our Supervisory Board consists of 16 members. The shareholders, by a majority of the votes cast in a general meeting, elect eight members and the employees elect the remaining eight members. Among the eight employee representatives on the Supervisory Board is one member from the ranks of the executive employees (*Leitende Angestellte*), five members are from the ranks of the employees (excluding executive employees) and two representatives are of the trade unions represented in the Infineon group in Germany. According to German law, the shareholders may determine the term of each shareholder-elected member of the Supervisory Board. The maximum term of office of shareholder-elected Supervisory Board members expires at the end of shareholders' general meeting in which the shareholders discharge the Supervisory Board members for the fourth fiscal year after the start of their term as a Supervisory Board member. The fiscal year in which the term of office begins is not included in this calculation. Seven shareholder representatives on the Supervisory Board were elected at the general shareholders meeting held on January 25, 2005, one was elected at the general shareholders meeting held on February 16, 2006. The term of all shareholder representatives ends with the annual general meeting to be held in 2010. Seven of the employee representatives on the Supervisory Board took office on January 20, 2004, one trade union representative was appointed by the lower district court of Munich on April 20, 2006. The term of all employee representatives ends with the annual general meeting to be held in 2009.

The shareholders may remove any member of the Supervisory Board they have elected at a general meeting. The employee representatives may be removed by those employees that elected them by a vote of three-quarters of the

votes cast. The Supervisory Board elects a chairman and a deputy chairman from among its members. If no candidate is elected by a vote of two-thirds of the members of the Supervisory Board, the shareholder representatives elect the chairman and the employee representatives elect a

Table of Contents

deputy chairman. The Supervisory Board normally acts by simple majority vote, with the chairman having a deciding vote in the event of a deadlock in a second vote on the same matter.

The Supervisory Board meets at least once a quarter. Its main functions are:

to monitor our management;

to appoint our Management Board;

to approve decisions of our Management Board in relation to the following:

financial and investment planning, including both budgets and the establishment of limits for financial indebtedness;

any investment or disposition that exceeds 10 percent of our total investment budget; and

the taking of any financial risk vis-à-vis third parties in an amount exceeding 5 percent of our share capital.

to approve matters in areas that the Supervisory Board has made generally subject to its approval; and

to approve matters that the Supervisory Board decides on a case-by-case basis to make subject to its approval.

Our Supervisory Board has established an Investment, Finance and Audit Committee, comprising the chairman of the Supervisory Board and two other members of the Supervisory Board, one of whom is elected from the shareholder representatives and the other from the employee representatives on the Supervisory Board. The Investment, Finance and Audit Committee carries out the functions normally carried out by the audit committee of a U.S. company including, among other duties:

preparing the decisions of the Supervisory Board regarding approval of our company's annual financial statements, including review of the financial statements, our annual reports, the proposed application of earnings and the reports of our auditors;

reviewing the interim financial statements of our company that are made public or otherwise filed with any securities regulatory authority;

issuing to our auditors terms of reference for their audit of our annual financial statements;

examining our compliance, internal control, internal audit and risk management systems; and

approving decisions of our Management Board or a committee thereof regarding increases of our company's capital through the issuance of new shares out of authorized or conditional capital, to the extent they are not issued to employees as part of a share option plan.

The Investment, Finance and Audit Committee also supports the Supervisory Board in its duty of supervising our business and may exercise the oversight powers conferred upon the Supervisory Board by German law for this purpose. Decisions of the Investment, Finance and Audit Committee require a simple majority.

We entered into a consulting agreement with Prof. Johannes Feldmayer, a member of our Supervisory Board, with a term from March 4 to September 1, 2008. The Supervisory Board approved this agreement. Under the consulting agreement, Prof. Feldmayer provided advice and support to the Management Board with regard to the development of its strategy for reducing its interest in Qimonda, as well as its growth strategy for the AIM segment. In addition to the compensation for his membership on the Supervisory Board, Prof. Feldmayer received compensation in the total amount of EUR 62,500.00 for his services under this consulting agreement.

Neither we nor any of our subsidiaries have entered into special service contracts with the members of the Supervisory Board that provide for benefits during or upon termination of their board membership other than as described under Compensation .

Table of Contents

Management Board

Our Management Board currently consists of four members. Under our Articles of Association, our Supervisory Board determines the Management Board's size, although it must have at least two members.

Under our Articles of Association and German law, the Management Board adopts rules of procedure for the conduct of its affairs, and may amend them at any time. The adoption and amendment of these rules require the unanimous vote of the Management Board and the consent of the Supervisory Board. The Supervisory Board may, however, decide to adopt rules of procedure for the Management Board instead.

Our Management Board has adopted rules of procedure. Our Supervisory Board approved these rules and resolved that the following decisions of the Management Board require the consent of the Supervisory Board:

Decisions relating to financial and investment planning, including both budgets and the establishment of limits for financial indebtedness;

Decisions relating to any investment or disposition that exceeds 10 percent of our total investment budget; and

Decisions relating to the taking of any financial risk vis-à-vis third parties in an amount exceeding 5 percent of our share capital.

In addition, the rules of procedure provide that the chairman of the Management Board must notify the chairman of the Supervisory Board of any pending matter that is significant. The Supervisory Board may, on a case-by-case basis, designate such matter as one requiring Supervisory Board approval.

The Management Board members are jointly responsible for all management matters and pursuant to the current rules of procedure must jointly decide on a number of issues, including:

the annual financial statements;

the calling of the shareholders' general meeting;

matters for which the consent of the shareholders' general meeting or of the Supervisory Board must be obtained; and

matters involving basic organizational, business policy and investment and financial planning questions for our company.

The rules of procedure provide that decisions of the Management Board require simple majority, unless statutory law, the Articles of Association of our company or the rules of procedure require otherwise.

The chairman of the Management Board must propose a plan that allocates responsibilities among the Management Board members and must obtain the consent of the Supervisory Board without delay once the Management Board has adopted the plan. This consent has been obtained.

The Supervisory Board appoints the members of the Management Board for a maximum term of five years. Members of the Management Board may be reappointed or have their term extended for one or more terms of up to five years each. The Supervisory Board may remove a member of the Management Board prior to expiration of such member's

term for good cause, for example, in the case of a serious breach of duty or a bona fide vote of no confidence by the shareholders' general meeting. A member of the Management Board may not deal with, or vote on, matters that relate to proposals, arrangements or contracts between such member and our company.

Table of Contents

Significant Differences between our Corporate Governance Practices and those of U.S. Companies Listed on the New York Stock Exchange

A brief, general summary of the significant differences between our corporate governance practices under German law and the practices applicable to U.S. companies listed on the New York Stock Exchange is available in the corporate governance section of our website, www.infineon.com.

Compensation

In compliance with legal requirements and the recommendations of the German Corporate Governance Code as amended on June 6, 2008, this report provides information on the principles for determining the compensation of the Management Board and Supervisory Board of Infineon Technologies AG and the amount of compensation paid to the individual members of the Management Board and Supervisory Board.

Compensation of the Management Board

Compensation structure

The Executive Committee of the Supervisory Board, which includes the chairman of the Supervisory Board Max Dietrich Kley, the deputy chairman of the board Gerd Schmidt, and board member Prof. Dr. Martin Winterkorn, is responsible for determining the compensation of the Management Board. The compensation of the members of the Management Board is intended to reflect the Company's size and global presence, its economic condition and performance, and the level and structure of the compensation paid to management boards of comparable companies within Germany and abroad. Additional factors taken into account are the duties, responsibilities and contributions of each member of the Management Board. Their compensation complies with the stipulations of Section 87 of the German Stock Corporation Act and is calculated to be competitive both nationally and internationally and thus to provide an incentive for dedicated and successful work within a dynamic environment. The level of compensation is reevaluated every two years, taking into account an analysis of the income paid to executives of comparable companies.

The compensation of the Management Board comprises the following elements:

Fixed annual base salary. The non-performance-related annual base salary is contractually fixed. It is partly paid in 12 equal monthly installments, and partly paid as a lump sum at the end of each fiscal year (referred to below as the "Annual Lump Sum").

Performance-related compensation. The annual bonus is dependent on the return on assets, which we define as earnings before interest and taxes (EBIT) adjusted for exceptional effects, in proportion to capital employed. This ensures that a bonus is earned only if the business develops positively. The annual bonus is determined by the Executive Committee in a two-phase process. In a first step, a target bonus amount is determined from a table agreed in the service agreements on the basis of the return on assets. The Executive Committee subsequently evaluates the personal performance of each individual board member over the past fiscal year, and then determines the actual bonus amount. In addition to the bonus dependent on the return on assets, Management Board contracts provide for a possible special bonus awarded in recognition of special business achievements.

Infineon Technologies AG stock options. Management Board members are eligible to receive stock options under the 2006 Stock Option Plan approved by the Infineon Technologies AG Shareholders' Annual General Meeting on February 16, 2006, as a variable compensation element with a long-term incentive effect and a

risk character. Each stock option guarantees the right to acquire one share at a fixed exercise price. The options are valid for six years and may be exercised only after an initial waiting period of three years and not during specified black-out periods. The exercise price at which a share may be acquired upon exercise of an option is equal to 120 percent of the average Infineon opening prices on the Frankfurt Stock Exchange in the XETRA

Table of Contents

trading system over the five trading days preceding the date that the option is granted. The exercise of the options is dependent on the attainment of absolute and relative performance targets. The precondition for the exercise of the option rights is that the Infineon share price on the Frankfurt Stock Exchange in the XETRA trading system equals or exceeds the exercise price on at least one trading day during the option life. Furthermore, the options can only be exercised if the Infineon share price exceeds the performance of the comparative index Philadelphia Semiconductor Index for three consecutive days on at least one occasion during the life of the option. These absolute and relative performance targets serve to ensure that the options are only exercised if the value of the Company significantly increases. The Supervisory Board is responsible for all decisions on granting options to members of the Management Board. In the 2008 fiscal year, no options were granted to members of the Management Board. The main provisions of our 2006 stock option plan are described in note 27 to our consolidated financial statements for the year ended September 30, 2008, and are available in full text on the Internet at www.infineon.com.

Compensation of the Management Board in the 2008 fiscal year

In the 2008 fiscal year, the active members of the Management Board received total compensation of 4,920,006. No performance-related bonuses were paid for the 2008 fiscal year.

The individual members of the Management Board who were active in the 2008 fiscal year received the following annual compensation (gross without statutory deductions)⁽¹⁾:

Overview of the total compensation

Management Board member	Fiscal year	Cash compensation in	Stock-based compensation in	Total compensation in ⁽²⁾
Peter Bauer (CEO)	2008	1,089,614		1,089,614

	2007	2,042,500	2,407,500	99,578	4,549,578

(1) Each in accordance with the duration of membership on the Management Board during the respective fiscal year.

(2) The compensation included under Other comprises primarily the monetary value of the provision of a company car and insurance contributions, and, in the case of Dr. Schröter, the reimbursement of expenses for the maintenance of double residence.

Stock-based compensation

In the 2008 fiscal year, no stock options were granted to members of the Management Board (in the previous year, 550,000 stock options with a fair value at the grant date totaling 1,116,500 were granted to the members of the Management Board). In the 2008 fiscal year, no member of the Management Board exercised stock options.

Commitments to the Management Board upon termination of employment**Allowances and pension entitlements in the 2008 fiscal year**

The pension agreement with Dr. Wolfgang Ziebart provided for a monthly pension payment equal to 70 percent of his last monthly base salary. The other members of the Management Board are contractually entitled to a fixed pension

payment, which increases by 5,000 (and in the case of Mr. Bauer by 10,000) annually until a maximum amount is attained. In accordance with U.S. GAAP, a total of 3,137,082 was added to pension reserves in the 2008 fiscal year (previous year: 3,146,830). Upon termination of membership in the Management Board, pension entitlements normally begin from age 60 at the earliest. Exceptions are provided for in cases such as departures from the board for health reasons and surviving dependents' pensions. Our agreements with Dr. Ziebart and Mr. Bauer deviate from this model, and each is entitled to a pension before age 60 if his contract is not renewed (the monthly pension of Dr. Ziebart will commence as of September 1, 2009), provided that there is no good cause for a revocation of the appointment in accordance with section 84, paragraph 3 of the German Stock Corporation Act. In such a case, however, his income from other employment and self-employed activities would be set off against up to one half of his pension entitlements.

Table of Contents

The following overview represents the annual pension entitlements, as of the beginning of retirement, for Management Board members active in the 2008 fiscal year, on the basis of the entitlements vested through September 30, 2008.

Management Board member	Pension entitlements (annual) as of beginning of pension period in	Maximum amount in	Transfer to pension reserves in fiscal year 2008 (US-GAAP) in
Peter Bauer (CEO)	280,000 ⁽¹⁾	400,000	226,778
Prof. Dr. Hermann Eul	200,000	270,000	175,369
Peter J. Fischl	350,000	350,000	475,576
Dr. Reinhard Ploss	170,000	210,000	169,488
Dr. Marco Schröter	250,000	350,000	
Dr. Wolfgang Ziebart	560,000	560,000	2,089,871
Total	1,810,000		3,137,082

⁽¹⁾ Mr. Bauer's pension entitlement was increased effective October 1, 2008 to 280,000.

The contracts of Dr. Ziebart and Mr. Bauer, furthermore, allow for a one-time transitional allowance upon termination of employment. This transitional allowance is equivalent to one year's income, composed of the last 12 basic monthly installments, and a sum amounting to the average of the bonus sums received over the last three fiscal years prior to termination. There is no right to the payment of a transitional allowance in the event of termination by a member of the Management Board not prompted by the company, and if the company has good cause for the termination. Accordingly, Dr. Ziebart is entitled to a one-time transitional allowance, which is payable on August 31, 2009.

Early termination of employment

The contracts with the members of our Management Board include change-of-control clauses: A change-of-control within the meaning of this clause occurs when a third party, individually or in cooperation with another party, holds 30 percent of voting rights in Infineon Technologies AG as stipulated by section 30 of the German Securities Acquisition and Takeover Act (*Wertpapiererwerbs- und Übernahmegesetz*). In case of such a change-of-control, the Management Board members have the right to resign and terminate their contracts within a period of 12 months after the announcement of a change of control if the exercise of their office and the fulfillment of their service contract become unacceptable, due, for example, to considerable restrictions in their areas of responsibility. In such an event, board members are entitled to a continuation of their annual target income for the full remaining duration of their contracts and a minimum of two years. This amount is based on the annual target income for the year of termination and the variable components assuming a return on assets of 6 percent. In the event of a termination of the contract by Infineon Technologies AG within 12 months after the announcement of a change of control, the members of the Management Board are entitled to a continuation of their annual target income for the full remaining duration of their contracts and a minimum of three years. The Management Board members' pension entitlements remain unaffected. These rights in the event of a change of control, however, only exist if there is no serious breach of duty.

Management Board contracts do not generally provide for severance payments in the event of an early termination of contract.

Fringe benefits and other awards in the 2008 fiscal year

The members of the Management Board received no fringe benefits besides the elements listed under **Other** in the compensation table.

We do not provide loans to the members of the Management Board.

Table of Contents

The members of the Management Board received no compensation or promise of compensation with regard to their activities on the Management Board from third parties in the 2008 fiscal year.

We maintain directors' and officers' group liability insurance (D&O insurance). The insurance policy covers the personal liability risk in the event of claims made against members of the Management Board for indemnification of losses incurred in the exercise of their duties. Each member of the Management Board has agreed to an adequate deductible (which constitutes a deductible as defined by the German Corporate Governance Code, clause 3.8, paragraph 2).

Payments to former members of the Management Board in the 2008 fiscal year

Former members of the Management Board received total payments of 916,896 (severance and pension payments) in the 2008 fiscal year. This includes the compensation paid to Dr. Ziebart starting June 2008 in the amount of 624,396 as stipulated under his employment contract.

According to U.S. GAAP, a total of 2,194,127 was added to pension reserves during the 2008 fiscal year for current pensions and entitlements to pensions by former Management Board members. Furthermore, pension reserves for active members of the Management Board in the amount of 13,514,299 were reclassified into pension reserves for former members of the Management Board; as of September 30, 2008, these pension reserves amount to 26,190,751.

Compensation of the Supervisory Board

Compensation structure

The compensation of the Supervisory Board is determined in our Articles of Association. It is intended to reflect our company's size, the duties and responsibilities of the members of the Supervisory Board, and our economic condition and performance. The compensation of the Supervisory Board is governed by Section 11 of the Articles of Incorporation and comprises two elements:

fixed compensation of 25,000 per year and

a **variable element** in the form of 1,500 **share appreciation rights** per annum, which are granted and may be exercised on the same terms as provided for by the Infineon Stock Option Plan 2006 approved by the Shareholders' Annual General Meeting, which is valid in the fiscal year in which these rights are granted. These share appreciation rights, however, do not entitle the holder to purchase shares but only to a settlement in cash. The share appreciation rights expire six years from the date of grant, and can be exercised only following a waiting period of three years. The exercise price per share appreciation right amounts to 120 percent of the average Infineon opening price on the Frankfurt Stock Exchange in the XETRA trading system over the five trading days preceding the date the respective share appreciation right is granted. The exercise of share appreciation rights is dependent on the attainment of absolute and relative performance targets as stipulated in the 2006 Stock Option Plan. The basic principles of our 2006 Stock Option Plan are described in note 27 to the consolidated financial statements for the year ended September 30, 2008 and are available in full text on the Internet at www.infineon.com.

Additional compensation is paid for certain functions on the Supervisory Board. The Chairman of the Supervisory Board receives an additional 100 percent of the fixed compensation. Furthermore, each Vice-Chairman and each other member of a Supervisory Board committee, with the exception of the Nomination Committee and the Mediation Committee, receives an additional 50 percent of their fixed compensation.

Members of the Supervisory Board, moreover, receive reimbursement of all expenses incurred in connection with their duties, as well as the value-added tax apportioned to their compensation, to the extent that they can charge for it separately and do so.

Table of Contents***Compensation of the Supervisory Board in the 2008 fiscal year***

In the 2008 fiscal year, the members of the Supervisory Board waived their share appreciation rights. The Supervisory Board compensation otherwise remained unchanged from the previous year. The individual members of the Supervisory Board received the following cash compensation (excluding 19 percent VAT), in the 2008 fiscal year:

Supervisory Board member	Base compensation in	Additional compensation for special functions in	Total payment in
Max Dietrich Kley	25,000	25,000	50,000
Wigand Cramer	25,000		25,000
Alfred Eibl	25,000	12,500	37,500
Prof. Johannes Feldmayer	25,000		25,000
Jakob Hauser	25,000	12,500	37,500
Gerhard Hobbach	25,000		25,000
Prof. Dr. Renate Köcher	25,000		25,000
Dr. Siegfried Luther	25,000	12,500	37,500
Michael Ruth	25,000		25,000
Gerd Schmidt	25,000	12,500	37,500
Prof. Dr. Doris Schmitt-Landsiedel	25,000	12,500	37,500
Kerstin Schulzendorf	25,000		25,000
Dr. Eckart Sünner	25,000		25,000
Alexander Trüby	25,000	12,500	37,500
Prof. Dr. Martin Winterkorn	25,000	12,500	37,500
Prof. Dr.-Ing. Klaus Wucherer	25,000	12,500	37,500
Total	400,000	125,000	525,000

Other

We do not provide loans to the members of the Supervisory Board.

We maintain a directors and officers group liability insurance (D&O insurance). The insurance covers the personal liability risk in the event of claims made against members of the Supervisory Board for indemnification of losses incurred in the exercise of their duties. Each member of the Supervisory Board has agreed to an adequate deductible (which constitutes a deductible as defined by the German Corporate Governance Code, section 3.8, paragraph 2).

Long-Term Incentive Plans

2006 Stock Option Plan. In February 2006, we adopted and our shareholders approved the Infineon Technologies AG 2006 Stock Option Plan, which we refer to as the 2006 plan. Under the 2006 plan, we have the authority over a three-year period to grant non-transferable share options to members of our Management Board, members of senior management of our subsidiaries, and other key managers and employees at Infineon Technologies AG and our

domestic and foreign subsidiaries. We may grant options covering up to 1.625 million shares to members of our Management Board, 1.3 million shares to senior management of our domestic and foreign subsidiaries, and 10.075 million shares to other key managers and employees at levels below the Management Board of Infineon Technologies AG and senior management of our domestic and foreign subsidiaries. No more than 40 percent of the options available for grant to one of those three groups may be issued during one fiscal year, and we may not grant options under the 2006 plan covering more than 13 million shares in the aggregate. As of September 30, 2008, options to purchase an aggregate of 2.2 million shares were outstanding under the 2006 plan, of which

Table of Contents

options to purchase 550,000 shares were granted to members of our Management Board during their membership on the Management Board.

Under the 2006 plan, the Supervisory Board decides annually within a period of 45 days after publication of the results for the fiscal year then ended or of the first or second quarter of a fiscal year, but no later than two weeks before the end of the quarter, how many options to grant to the Management Board. During that same period the Management Board may grant options to other eligible persons.

The exercise price of the options granted under the 2006 plan is 120 percent of the average opening share price of our shares on the Frankfurt Stock Exchange over the five trading days preceding the date of grant. Options granted under the 2006 plan have a term of six years after the date of grant and may be exercised after the third anniversary of the date of grant, at the earliest. In addition, options may be exercised only if both (a) the share price of our company has reached the exercise price at least once during a trading day, and (b) the share price of our company has exceeded for at least three consecutive days, on at least one occasion since the date of grant, the trend of the Philadelphia Semiconductor Stock Index, a comparative index of the share price of companies in a similar sector to Infineon Technologies AG. If the Philadelphia Semiconductor Index is discontinued or is fundamentally altered so as not to provide an appropriate means for comparison, then the Management Board will either select another index to serve as a comparative index or use a new index including as many as possible of the individual prices previously tracked by the Philadelphia Semiconductor Stock Index. In addition, holders may not exercise an option within a fixed time period prior to or following publication of our quarterly or annual results.

2001 International Long-Term Incentive Plan. In April 2001, we adopted the Infineon Technologies AG 2001 International Long-Term Incentive Plan, which we refer to as the 2001 plan.

Under the 2001 plan, we granted non-transferable share options to members of our Management Board, to the members of the top management of our subsidiaries, and to other senior level executives and employees with exceptional performance. As of September 30, 2008, options to purchase an aggregate of 31.1 million shares were outstanding under the 2001 plan, of which options to purchase 1.5 million shares were held by members of our Management Board. No further options will be granted under the 2001 plan.

The exercise price of the options granted under the 2001 plan is 105 percent of the average closing share price of our company's shares on the Frankfurt Stock Exchange over the five trading days preceding the date of grant. Options granted under the 2001 plan have a term of seven years from the date of grant and may be exercised at the earliest after the second anniversary of the date of grant, but only if the share price of our company has reached the exercise price at least once during a trading day. In addition, holders may not exercise an option within fixed time periods prior to or following publication of our quarterly or annual results.

1999 Stock Option Plan. Under our 1999 Stock Option Plan we granted non-transferable share options to members of our Management Board, directors of subsidiaries and affiliates, managers and key employees.

As of September 30, 2008, there were no options to purchase shares outstanding under the 1999 plan. The 1999 plan was discontinued and, accordingly, we no longer grant options under that plan.

Table of Contents**PRINCIPAL SHAREHOLDERS**

The following table shows the beneficial ownership, as of September 30, 2008, of our company's share capital by (1) the principal shareholders (each person or entity that has reported to us, as required by applicable German law, that it beneficially owns 5 percent or more of our shares) and (2) the members of our Management Board and Supervisory Board, each as a group. We are not directly or indirectly owned or controlled by any foreign government.

Members of the Supervisory Board as a group ⁽⁵⁾	*	*

(1) The business address of Dodge & Cox Investment Managers is 555 California Street, 40th Floor, San Francisco, California 94104, USA. Based solely on a notification to Infineon by the shareholder on March 11, 2008 pursuant to the requirements of the German Securities Trading Act.

(2) The business address of Merrill Lynch International is Merrill Lynch Financial Centre, 2 King Edward Street, London ECA1HQ, United Kingdom. Based solely on a notification to Infineon by the shareholder on February 15, 2008 pursuant to the requirements of the German Securities Trading Act.

(3) The business address of Templeton Global Advisors Limited is Templeton Building, Lyford Cay, PO Box N7759, Nassau, Bahamas. Based solely on a notification to Infineon by the shareholder on February 23, 2007 pursuant to the requirements of the German Securities Trading Act. On February 7, 2008, Templeton Global Advisors Limited, Franklin Resources, Inc., Charles B. Johnson and Rupert H. Johnson jointly filed a Schedule 13G with the US Securities and Exchange Commission reporting a beneficial holding of 116,664,804 ordinary shares as of December 31, 2007, representing 15.6 percent of our outstanding shares as of such date. On December 17, 2008, Templeton Global Advisors Limited notified Infineon that its shareholding had fallen below 3 percent.

(4) The business address of AXA S.A. is 25, Avenue Matignon, 75008 Paris, France. Based solely on a notification to Infineon by the shareholder on September 11, 2008 pursuant to the requirements of the German Securities Trading Act. On December 12, 2008, AXA S.A. notified Infineon that its shareholding had fallen below 3 percent.

(5) Represents less than 1 percent of our outstanding share capital.

The German Securities Trading Act (*Wertpapierhandelsgesetz*) requires each person whose shareholding of a listed German company reaches, exceeds or, after exceeding, falls below 3 percent, 5 percent, 10 percent, 15 percent, 20 percent, 25 percent, 30 percent, 50 percent or 75 percent voting rights thresholds to notify the corporation and the German Federal Supervisory Authority for Financial Services in writing without undue delay, at the latest within four trading days after they have reached, exceeded or fallen below such a threshold. In their notification, they must also state the number of shares they hold.

Other than as disclosed above, we have not been notified by any party holding 5 percent or more of our shares as of September 30, 2008.

Major shareholders do not have differing voting rights. Significant changes in the percentage ownership held of record by major shareholders in the last three fiscal years were as follows: On April 3, 2006, Siemens AG sold the remaining shares in our company held by it and it is no longer one of our shareholders.

To our knowledge, as of September 30, 2008, there were 106,564,907 of our American Depositary Shares outstanding (representing an equivalent number of our ordinary shares), which represented approximately 14.2 percent of our issued and outstanding share capital, and there were approximately 154 holders of record of our American Depositary Shares.

Table of Contents

RELATED PARTY TRANSACTIONS AND RELATIONSHIPS

Qimonda

On December 21, 2008, we, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. This proposed transaction is described under **Operating and Financial Review** **Recent Developments Related to Qimonda** .

In connection with the formation of Qimonda as a separate legal entity, Infineon and Qimonda entered into a number of agreements governing the carve-out of the memory products business, the licensing of intellectual property, the use of Infineon's 200-millimeter fabrication facility in Dresden, and support services in the areas of general support, IT services and research and development services.

Carve-out and Control

Qimonda was carved out as a wholly-owned subsidiary of Infineon effective May 1, 2006. Pursuant to the contribution agreements Infineon and Qimonda entered into in connection with the carve-out, Infineon contributed substantially all of the assets, liabilities, operations and activities, as well as the employees, of its memory products business to Qimonda. Infineon and Qimonda entered into arrangements with respect to various relationships between the two groups.

We are currently Qimonda's largest shareholder, with a direct and indirect shareholding of 77.5 percent. We have committed to a plan to dispose of our stake in Qimonda. Our majority ownership permits Qimonda to use the entire intellectual property umbrella as well as other benefits from contracts between the Infineon group of companies and third parties. We are a party to certain intellectual property cross-licensing and other contractual relationships with third parties for Qimonda's benefit. For as long as we, directly or indirectly, own a majority of Qimonda's shares, we will also have the majority of votes in Qimonda's shareholders' general meeting and will therefore be in a position to elect all of the shareholder-elected members of Qimonda's Supervisory Board.

All of the agreements relating to Qimonda's carve-out from Infineon, including those governing Qimonda's ongoing relationship with us, were concluded in the context of a parent-subsiary relationship and in the overall context of Qimonda's carve-out from Infineon. The terms of these agreements may be less favorable to us than had they been negotiated with unaffiliated third parties.

Arrangements relating to AMTC and BAC

Our partnership interests in the Advanced Mask Technology Center (**AMTC**) and the Maskhouse Building Administration Company (**BAC**) in Dresden were transferred to Qimonda pursuant to an agreement dated December 10, 2007 with Qimonda, Advanced Micro Devices, Toppan Photomask, AMTC and BAC.

Arrangement concerning the Licensing of Intellectual Property

In connection with the transfer of intellectual property to Qimonda, Infineon and Qimonda have entered into certain cross-licensing arrangements.

Indemnification

The contribution agreement includes provisions pursuant to which Qimonda agreed to indemnify Infineon against any claim (including any related expenses) arising in connection with the liabilities, contracts, offers, uncompleted transactions, continuing obligations, risks, encumbrances and other matters relating to the memory products business that were transferred to Qimonda in the carve-out. Qimonda also agreed to indemnify Infineon against any losses it may suffer under several guarantee and financing arrangements that relate to Qimonda's business but that cannot be transferred to Qimonda for legal, technical or practical reasons. In addition, the contribution agreement provides for indemnification of Infineon with respect to certain existing and future legal claims. With the exception of the securities and

Table of Contents

certain patent infringement and antitrust claims identified in note 34 to our consolidated financial statements, for which different arrangements apply as described in that section, Qimonda is obligated to indemnify Infineon against any liability arising in connection with claims related to the memory products business described in that section. Finally, the contribution agreement in principle provides for Qimonda to bear 60 percent of the total license fee payments payable by Infineon and Qimonda to which Infineon and Qimonda may agree in connection with two cases in which negotiations relating to licensing and cross-licensing were ongoing at the time of the carve-out, one of which is still ongoing. These payments could be substantial and could remain in effect for lengthy periods. The contribution agreement does not limit the aggregate liability Qimonda may incur as a result of its indemnification obligations, nor does it restrict the obligations to a certain time period after the carve-out as long as the events giving rise to them occurred prior to the carve-out.

Ongoing Services Relationships

Prior to Qimonda's carve-out, most of the administrative, financial, risk management, information technology and other services that Qimonda required were provided centrally by Infineon. Infineon has provided some of these services under certain services agreements. The terms of these agreements may be less favorable to Infineon than they might have been had they been negotiated with unaffiliated third parties.

For more information on related party transactions with Qimonda, please see Major Shareholders and Related Party Transactions Related Party Transactions in the Annual Report on Form 20-F filed by Qimonda with the U.S. Securities and Exchange Commission on November 16, 2007 (file no. 001-32972).

Table of Contents

ARTICLES OF ASSOCIATION

This section summarizes the material rights of holders of the shares of our company under German law and the material provisions of the Articles of Association of our company. This description is only a summary and does not describe everything that the Articles of Association contain. Copies of the Articles of Association are publicly available at our website, www.infineon.com, and from the Commercial Register in Munich, Germany. An English translation has been filed with the Securities and Exchange Commission in the United States.

Equity

The issued share capital of our company consists of 1,499,484,170 divided into 749,742,085 individual shares in registered form with a notional value of 2.00 each. Since our formation, changes in our share capital have been as follows:

At our formation, our share capital consisted of 400,000,000, represented by 200,000,000 shares.

On January 26, 2000, we increased our share capital from 400,000,000 to 800,000,000 by issuing 200,000,000 shares for a 400,000,000 transfer of corporate funds to capital. The new shares were issued to Siemens and Siemens Nederland N.V. in proportion to their respective ownership interests in our company at that time.

On February 14, 2000, we increased our share capital from 800,000,000 to 1,200,000,000 by issuing 200,000,000 shares for a 400,000,000 transfer of corporate funds to capital. The new shares were issued to Siemens and Siemens Nederland N.V. in proportion to their respective ownership interests in our company at that time.

On March 8, 2000, we increased our share capital by 33,400,000 to 1,233,400,000 for cash contributions by issuing 16,700,000 shares with full dividend entitlement for the 2000 fiscal year. The shares were sold in our initial public offering.

On April 28, 2000, we increased our share capital by 15,184,860 by issuing to Intel Corporation 7,592,430 shares with full dividend entitlement for the 2000 fiscal year. After the execution of the capital increase, our share capital consisted of 1,248,584,860.

On June 28, 2000, we increased our share capital by 2,418,154 against a contribution in kind by issuing 1,209,077 shares with full dividend entitlement for the 2000 fiscal year to Savan Communications Ltd. After execution of the capital increase our share capital consisted of 1,251,003,014.

On March 16, 2001, we increased our share capital by 886,976 against a contribution in kind by issuing 443,488 shares with full dividend entitlement for the 2001 fiscal year in connection with our investment in Ramtron International Corporation. After execution of the capital increase our share capital consisted of 1,251,889,990.

On April 11, 2001, we increased our share capital by 1,413,428 against a contribution in kind by issuing 706,714 shares with full dividend entitlement for the 2001 fiscal year in connection with our acquisition of Ardent Technologies Incorporated. After the execution of the capital increase our share capital consisted of 1,253,303,418.

In July 2001, we increased our share capital by 120,000,000 by issuing 60,000,000 shares (with full dividend entitlement for the 2001 fiscal year) in our secondary public offering. After the execution of the capital increase our share capital consisted of 1,373,303,418.

On July 25, 2001, we increased our share capital by 12,746,870 against a contribution in kind by issuing 6,373,435 shares with full dividend entitlement for the 2001 fiscal year in connection with our acquisition of Catamaran Communications Incorporated. After the execution of the capital increase, our share capital consisted of 1,386,050,288.

Table of Contents

On November 29, 2001, we increased our share capital by 24,000 by issuing 12,000 shares with full dividend entitlement for the 2002 fiscal year to group employees in connection with our 2001 employee share purchase program. After the execution of the capital increase, our share capital consisted of 1,386,074,288.

On July 24, 2002, we increased our share capital by 686,920 by issuing 343,460 shares with full dividend entitlement for the 2002 fiscal year to group employees in connection with our 2002 employee share purchase program. After the execution of the capital increase, our share capital consisted of 1,386,761,208.

On August 30, 2002, we increased our share capital by 55,000,000 against a contribution in kind by issuing 27,500,000 shares with full dividend entitlement for the 2002 fiscal year in connection with our acquisition of Ericsson Microelectronics AB, Stockholm, Sweden. After the execution of the capital increase, our share capital consisted of 1,441,761,208.

On March 23, 2004, we increased our share capital by 53,358,510 against a contribution in kind by issuing 26,679,255 shares with full dividend entitlement for the 2004 fiscal year in connection with the acquisition of the remaining interest in Infineon Technologies SC300 GmbH & Co. KG, Dresden. After the execution of the capital increase our share capital consisted of 1,495,119,718.

During the 2005 fiscal year, our share capital increased by 19,000 as a result of the exercise of 9,500 employee stock options. After these exercises our share capital consisted of 1,495,138,718.

During the 2006 fiscal year, our share capital increased by 79,870 as a result of the exercise of 39,935 employee stock options. After these exercises our share capital consisted of 1,495,218,588.

During the 2007 fiscal year, our share capital increased by 4,238,682 as a result of the exercise of 2,119,341 employee stock options. After these exercises our share capital consisted of 1,499,457,270.

During the 2008 fiscal year, our share capital increased by 26,900 as a result of the exercise of 13,450 employee stock options. After these exercises our share capital consisted of 1,499,484,170.

Registrar Services GmbH, the transfer agent and registrar of our company in Germany, registers record holders of shares in the share register on our behalf pursuant to a transfer agent agreement. The transfer agent also maintains the register of our shareholders.

Authorized Capital

Under the German Stock Corporation Act, a stock corporation's shareholders can authorize the Management Board to issue shares in a specified aggregate nominal amount of up to 50 percent of the issued share capital at the time the resolution is passed. The shareholders' authorization may extend for a period of no more than five years.

The Articles of Association of our company authorize the Management Board to increase the share capital with the Supervisory Board's consent. The Management Board may use these authorizations to issue new shares in one or more tranches:

in an aggregate nominal amount of up to 30 million to issue shares to employees of the Infineon group companies (in which case preemptive rights of the existing shareholders are excluded) until January 19, 2009 (Authorized Capital II/2004); and

in an aggregate nominal amount of up to 224 million to issue shares for cash (in which case preemptive rights of existing shareholders may be excluded under certain circumstances by the Management Board with the consent of the Supervisory Board) or in exchange for contributions in kind (in which case preemptive rights of the existing shareholders may be excluded by the

Table of Contents

Management Board with the consent of the Supervisory Board) until February 14, 2012 (Authorized Capital 2007).

Conditional Capital

Under the German Stock Corporation Act, a stock corporation's shareholders can create conditional capital of up to 50 percent of the issued share capital at the time of the resolution. Our Articles of Association provide for the following conditional capital as approved by our shareholders:

Conditional Capital I in an aggregate nominal amount of 91.6 million that may be used to issue up to 45.8 million new registered shares in connection with our 1999 and our 2001 long-term incentive plans;

Conditional Capital III in an aggregate nominal amount of 29 million that may be used to issue up to 14.5 million new registered shares in connection with our 2001 and 2006 long-term incentive plan;

Conditional Capital IV/2006 in an aggregate nominal amount of 24.5 million that may be used to issue up to 12.25 million new registered shares in connection with our 2006 long-term incentive plan;

Conditional Capital 2002 in an aggregate nominal amount of 152 million that may be used to issue up to 76 million new registered shares upon conversion of debt securities issued in June 2003; and

Conditional Capital 2007 in an aggregate nominal amount of 248 million that may be used to issue up to 124 million new registered shares upon conversion of debt securities, which we may issue at any time prior to February 14, 2012.

Conditional Capital 2008 in an aggregate nominal amount of 149.9 million that may be used to issue up to 74.95 million new registered shares upon conversion of debt securities, which we may issue at any time prior to February 13, 2013.

All of these shares will have dividend rights from the beginning of the fiscal year in which they are issued.

Preemptive Rights

Under the German Stock Corporation Act, an existing shareholder in a stock corporation has a preferential right to subscribe for issuances of new shares by that corporation in proportion to the number of shares he holds in the corporation's existing share capital. These rights do not apply to shares issued out of conditional capital. Preemptive rights also apply to securities that may be converted into shares, securities with warrants, profit sharing certificates and securities with dividend rights. The German Stock Corporation Act allows the exclusion of this preferential right only in limited circumstances. At least three fourths of the share capital represented at the relevant shareholders meeting must vote for exclusion. In addition to approval by the shareholders, the exclusion of preemptive rights requires a justification which the Management Board has to set forth in a written report to the shareholders. The justification must be based on the principle that the interest of the company in excluding preemptive rights outweighs the shareholders' interest in their preemptive rights.

Preemptive rights resulting from a capital increase may generally be transferred and may be traded on any of the German stock exchanges upon which our shares are traded for a limited number of days prior to the final date on which the preemptive rights may be exercised.

Shareholders' Meetings and Voting Rights

Our shareholders vote at general meetings. A general meeting of the shareholders of Infineon may be called by the Management Board or, in certain cases, by the Supervisory Board. Shareholders holding in

Table of Contents

the aggregate at least 5 percent of our issued share capital may also require the Management Board to call a meeting. The annual general meeting must take place within the first eight months of the fiscal year. The Management Board calls this meeting upon the receipt of the Supervisory Board's report on the annual financial statements.

Under German law and the Articles of Association of our company, our company must publish notices of shareholder meetings in the electronic edition of the German Federal Gazette (*elektronischer Bundesanzeiger*) at least thirty days before the last day on which the shareholders must notify our company that they intend to attend the meeting. According to our Articles of Association, we may also communicate information to shareholders of our company using electronic media.

A shareholder or group of shareholders holding a minimum of either 5 percent of the share capital of our company or shares representing at least 500,000 of its registered capital may require that additional or modified proposals be made at our shareholders' general meeting.

Shareholders who are registered in the share register may participate in and vote at the shareholders' general meeting. A notice by a shareholder of his or her intention to attend a shareholders' general meeting must be given to our company at least six days before the meeting, not counting the day of notice and the day of the meeting. Following the deadline for the registration of attendance at the shareholders' general meeting, the shares are not blocked and may be transferred. In certain cases, a shareholder can be prevented from exercising his or her voting rights. This would be the case, for instance, for resolutions on the waiver or assertion of a claim by our company against the shareholder. Furthermore, a breach of the notification requirements with regard to material holdings in voting rights according to the German securities laws results in a loss of the rights attached to the shares, including the voting rights, until the satisfaction of the notification requirement. In the event of willful or grossly negligent breaches of the notification requirement, the loss of the rights continues for six months following the subsequent submission of the notification.

Each share carries one vote at general meetings of the shareholders. Resolutions are generally passed with a simple majority of the votes cast. Resolutions that require a capital majority are passed with a simple majority of the issued capital, unless statutory law or the Articles of Association of our company require otherwise. Under the German Stock Corporation Act, a number of significant resolutions must be passed by a majority of the votes cast and at least 75 percent of the share capital represented in connection with the vote taken on that resolution. The majority required for some of these resolutions may be lowered by the Articles of Association. The shareholders of our company have lowered the majority requirements to the extent permitted by law.

Although our company must notify shareholders of an ordinary or extraordinary shareholders' meeting as described above, neither the German Stock Corporation Act nor our Articles of Association fix a minimum quorum requirement. This means that holders of a minority of our shares could control the outcome of resolutions not requiring a specified majority of our outstanding share capital.

According to our Articles of Association, a resolution that amends the Articles of Association must be passed by a majority of the votes cast and at least a majority of the nominal capital represented at the meeting of shareholders at which the resolution is considered. However, resolutions to amend the business purpose stated in our Articles of Association also require a majority of at least three quarters of the share capital represented at the meeting. The 75 percent majority requirement also applies to the following matters:

the exclusion of preemptive rights in a capital increase or the issue of convertible bonds or bonds with warrants;

capital decreases;

a creation of authorized capital or conditional capital;

a dissolution;

Table of Contents

a merger or a consolidation with another stock corporation or another corporate transformation;
a transfer of all or virtually all of the assets of our company; and
the conclusion of any direct control, profit and loss pooling or similar inter-company agreements.

Dividend Rights

Shareholders participate in profit distributions in proportion to the number of shares they hold.

Under German law, we may declare and pay dividends only from balance sheet profits as they are shown in our unconsolidated annual financial statements prepared in accordance with applicable German law. In determining the distributable balance sheet profits, the Management Board and the Supervisory Board may allocate to profit reserves up to one half of the annual surplus remaining after allocations to statutory reserves and losses carried forward.

The shareholders, in determining the distribution of profits, may allocate additional amounts to profit reserves and may carry forward profits in part or in full.

According to the Articles of Association of our company the shareholders' general meeting may also resolve upon a dividend in kind in addition to or instead of a dividend in cash.

Dividends approved at a shareholders' general meeting are payable on the first stock exchange trading day after that meeting, unless otherwise decided at the shareholders' general meeting. Where shareholders hold physical certificates, we will pay dividends to those shareholders who present us or the paying agent or agents that we may appoint from time to time, with the appropriate dividend coupon. If a shareholder holds shares that are entitled to dividends in a clearing system, the dividends will be paid according to that clearing system's rules. We will publish notice of dividends paid and the paying agent or agents that we have appointed in the electronic edition of the German Federal Gazette.

Liquidation Rights

In accordance with the German Stock Corporation Act, if we are liquidated, any liquidation proceeds remaining after all of our liabilities have been paid off would be distributed among our shareholders in proportion to their holdings.

Shareholders' Other Rights and Obligations

Our shareholders have other rights and obligations, for example the right to participate in the general discussion at the annual meeting of shareholders and ask questions of our management. If shareholders believe that our company has been harmed by members of the Management Board or Supervisory Board they can initiate proceedings against those persons under certain conditions. If a German court determines that members of the Management Board or Supervisory Board have violated their obligations towards our company, then they are liable for damages to our company, but generally not to the shareholders directly. Such direct claims would be successful under very rare circumstances, for example upon a finding that the member of the Management Board or the Supervisory Board has engaged in willful misconduct with the intention of harming shareholders.

Disclosure Requirement

The German Securities Trading Act requires each person whose shareholding of a listed company reaches, exceeds or, after exceeding, falls below 3 percent, 5 percent, 10 percent, 15 percent, 20 percent, 25 percent, 30 percent, 50 percent or 75 percent voting rights thresholds to notify the corporation and the German Federal Supervisory Authority for Financial Services in writing without undue delay, at the latest within four trading days after they have reached, exceeded or fallen below such a threshold. In their notification, they must also state the number of shares they hold. Such holders cannot exercise any rights associated with those shares until they have satisfied this disclosure requirement. In the event of willful or grossly negligent breaches of the notification requirement, the loss of the rights continues for six months

Table of Contents

following the subsequent submission of the notification. In addition, the German Securities Trading Act contains various rules designed to ensure the attribution of shares to the person who has effective control over the exercise of the voting rights attached to those shares.

Repurchase of Our Own Shares

We may repurchase our own shares pursuant to the authorization granted by the shareholders' general meeting on February 14, 2008 or in other very limited circumstances set out in the German Stock Corporation Act. The authorization granted by our shareholders' general meeting expires on August 13, 2009. Shareholders may grant a new authorization at our 2009 shareholders' general meeting. Shareholders may not grant a share repurchase authorization lasting for more than 18 months. The rules in the German Stock Corporation Act generally limit repurchases to 10 percent of our share capital and resales must be made either on the stock exchange, in a manner that treats all shareholders equally or in accordance with the rules that apply to preemptive rights relating to a capital increase.

Corporate Purpose of Our Company

The corporate purpose of our company, described in section 2 of the Articles of Association, is direct or indirect activity in the field of research, development, manufacture and marketing of electronic components, electronic systems and software, as well as the performance of related services.

Registration of Our Company with the Commercial Register

Our company was entered into the commercial register of Munich, Germany, as a stock corporation on July 14, 1999 under the number HRB 126492.

Table of Contents**ADDITIONAL INFORMATION****Organizational Structure**

Infineon Technologies AG is the parent company of the Infineon group, including Qimonda, with subsidiaries incorporated in jurisdictions throughout Europe and Asia, as well as in the United States. Our most significant subsidiaries are set out below. Unless otherwise indicated, all of the subsidiaries in the Infineon group (including Qimonda) were directly or indirectly 100 percent owned by Infineon Technologies AG, and all of the subsidiaries in the Qimonda group were directly or indirectly 100 percent owned by Qimonda AG, as of September 30, 2008.

Principal Subsidiaries as of September 30, 2008

Corporate name	Registered office	Principal activity
<i>Infineon Group:</i>		
ALTIS Semiconductor S.N.C ⁽¹⁾	Essonnes, France	Production

- (1) 50 percent interest plus one share held by Infineon. In August 2007, Infineon, IBM and Advanced Electronic Systems AG (AES) entered into an agreement, under which AES is to acquire the interests in ALTIS from Infineon and IBM. As of September 30, 2008, negotiations with AES have not progressed as previously anticipated and could not be completed. Despite the fact that negotiations are ongoing with additional parties, the outcome of these negotiations is uncertain.
- (2) 60 percent held by Infineon.
- (3) 35.6 percent ownership interest held by Qimonda. On October 13, 2008, Qimonda announced that they entered into a share purchase agreement to sell its 35.6 percent stake in Inotera Memories, Inc, to Micron Technology, Inc, for cash proceeds of US\$400 million. The sale of the Inotera stake occurred in two equal tranches, on October 20, 2008 and November 26, 2008, respectively.
- (4) 77.5 percent held by Infineon.
- (5) 62.8 percent interest held by Qimonda.

Table of Contents

Dividend Policy

Under the German Stock Corporation Act (*Aktiengesetz*), the amount of dividends available for distribution to shareholders is based on the level of earnings (*Bilanzgewinn*) of the ultimate parent, Infineon Technologies AG, as determined in accordance with HGB, the German Commercial Code . All dividends must be approved by the shareholders. The ordinary shareholders meeting held in February 2008 did not authorize a dividend in respect of the 2007 fiscal year. No earnings are available for distribution as a dividend for the 2008 fiscal year, since Infineon Technologies AG on a stand-alone basis as the ultimate parent incurred a cumulative loss (*Bilanzverlust*) as of September 30, 2008. Subject to market conditions, we intend to retain future earnings for investment in the development and expansion of our business.

Significant Changes

Except as discussed elsewhere in this annual report on Form 20-F, no significant change has occurred since the date of the annual financial statements included in this annual report on Form 20-F.

Market Information

General

The principal trading market for our shares is the Frankfurt Stock Exchange, where our ordinary shares trade under the trading symbol IFX. Options on the shares trade on the German options exchange (Eurex Deutschland) and other exchanges. All of our shares are in registered form. ADSs, each representing one share, are listed on the New York Stock Exchange and trade under the symbol IFX. The depositary for the ADSs is Deutsche Bank.

Table of Contents***Trading on the Frankfurt Stock Exchange***

Our shares have traded on the Frankfurt Stock Exchange since March 13, 2000. The table below sets forth, for the periods indicated, the high and low closing sales prices for our company's shares on the Frankfurt Stock Exchange, as reported by the Frankfurt Stock Exchange Xetra trading system:

	Price per share in Euro	
	High	Low
Fiscal year ended September 30, 2004	13.65	7.80
Fiscal year ended September 30, 2005	9.00	6.43
Fiscal year ended September 30, 2006	9.95	7.60
Fiscal year ended September 30, 2007	13.44	9.25
Fiscal year ended September 30, 2008	11.95	3.66
October 2006 through December 2006	10.68	9.25
January 2007 through March 2007	12.27	10.66
April 2007 through June 2007	12.81	10.88
July 2007 through September 30, 2007	13.44	10.70
October 2007 through December 2007	11.95	7.62
January 2008 through March 2008	8.13	4.08
April 2008 through June 2008	7.11	4.57
July 2008 through September 30, 2008	6.25	3.66
June 2008	6.67	5.53
July 2008	5.32	4.37
August 2008	6.12	4.80
September 2008	6.25	3.66
October 2008	4.12	2.05
November 2008	3.06	1.72
December 2008 ⁽¹⁾	1.69	0.65

⁽¹⁾ Up to and including December 22, 2008.

On December 22, 2008, the closing sales price per share on the Frankfurt Stock Exchange, as reported by the Xetra trading system, was 0.70, equivalent to \$0.98 per share (translated at the noon buying rate on December 22, 2008).

Table of Contents***Trading on the New York Stock Exchange***

ADSs representing our shares have traded on the New York Stock Exchange since March 13, 2000. The table below sets forth, for the periods indicated, the high and low closing sales prices for the ADSs on the New York Stock Exchange:

	Price per ADS in U.S. dollars	
	High	Low
Fiscal year ended September 30, 2004	15.87	9.39
Fiscal year ended September 30, 2005	11.74	8.40
Fiscal year ended September 30, 2006	12.68	8.95
Fiscal year ended September 30, 2007	18.68	11.77
Fiscal year ended September 30, 2008	17.13	5.24
October 2006 through December 2006	14.03	11.77
January 2007 through March 2007	16.26	13.94
April 2007 through June 2007	17.28	14.75
July 2007 through September 30, 2007	18.68	14.36
October 2007 through December 2007	17.13	11.29
January 2008 through March 2008	11.87	6.34
April 2008 through June 2008	10.96	7.20
July 2008 through September 30, 2008	8.99	5.24
June 2008	10.30	8.53
July 2008	8.39	6.96
August 2008	8.97	7.40
September 2008	8.99	5.24
October 2008	5.74	2.57
November 2008	3.97	2.02
December 2008 ⁽¹⁾	2.07	0.88

⁽¹⁾ Up to and including December 22, 2008.

On December 22, 2008, the closing sales price per ADS on the New York Stock Exchange was \$0.98.

Exchange Rates

Fluctuations in the exchange rate between the Euro and the U.S. dollar will affect the U.S. dollar amounts received by owners of shares or ADSs on conversion of dividends, if any, paid in Euro on the shares and will affect the U.S. dollar price of the ADSs on the New York Stock Exchange. In addition, to enable you to ascertain how the trends in our financial results might have appeared had they been expressed in U.S. dollars, the table below states the average exchange rates of U.S. dollars per Euro for the periods shown. The annual average exchange rate is computed by using the Federal Reserve noon buying rate for the Euro on the last business day of each month during the period indicated.

Annual average exchange rates of the U.S. dollar per Euro

Fiscal year ended September 30,

Average

2004	1.2199
2005	1.2727
2006	1.2364
2007	1.3415
2008	1.5067

Table of Contents

The table below shows the high and low Federal Reserve noon buying rates for Euro in U.S. dollars per Euro for each month from April 2008 through September 2008:

Recent high and low exchange rates of the U.S. dollar per Euro

	High	Low
April 2008	1.6010	1.5568
May 2008	1.5784	1.5370
June 2008	1.5749	1.5368
July 2008	1.5923	1.5559
August 2008	1.5569	1.4660
September 2008	1.4737	1.3939

The noon buying rate on September 30, 2008 was 1.00 = \$1.4081, and on December 22, 2008 was 1.00 = \$1.3952.

Taxation***German Taxation***

The following is a summary discussion of the material German tax consequences for shareholders who are not resident in Germany for income tax purposes and who do not hold shares or ADSs as business assets of a permanent establishment or fixed base in Germany (Non-German Shareholders). The discussion does not purport to be a comprehensive description of all the tax considerations that may be relevant to a decision to invest in or hold our shares or ADSs. The discussion is based on the tax laws of Germany as in effect on the date of this annual report, which may be subject to change at short notice and, within certain limits, possibly also with retroactive effect. You are advised to consult your tax advisors in relation to the tax consequences of the acquisition, holding and disposition or transfer of shares and ADSs and in relation to the procedure which needs to be observed in the event of a possible reduction or refund of German withholding taxes. Only these advisors are in a position to duly consider your specific tax situation.

Taxation of the Company

In Germany, the Corporate Tax Reform Act of 2008 introduced several changes to the taxation of German business activities, including a reduction of the combined corporate and trade tax rate for the Company from approximately 37 percent to approximately 28 percent.

In principle, German corporations are subject to corporate income tax at a rate of 15 percent (25 percent prior to 2008). This tax rate applies irrespective of whether profits are distributed or retained. In addition, a solidarity surcharge of 5.5 percent is levied on the assessed corporate income tax liability, so that the combined effective tax burden of corporate income tax and solidarity surcharge is 15.825 percent (26.375 percent prior to 2008). Certain foreign source income is exempt from corporate income tax. Generally, dividends received by us and capital gains realized by us on the sale of shares in other corporations will also be exempt from corporate income tax. However, 5 percent of such dividends and capital gains are considered non-deductible business expenses.

In addition, German corporations are subject to a profit-based trade tax, the exact amount of which depends on the municipality in which the corporation conducts its business. With effect for fiscal years ending after December 31, 2007, the basic factor for the calculation of trade tax applicable to corporations has been reduced from 0.05 to 0.035.

As a compensation, trade tax is no longer a deductible item in calculating the corporation's tax base for corporate income tax and trade tax purposes.

Tax losses carried forward in respect of German corporate income tax and trade tax have an indefinite life. According to a minimum taxation regime applicable as of 2004, not more than 1 million plus

Table of Contents

60 percent of the amount exceeding 1 million of the income of one fiscal year may be offset against tax losses carried forward.

The Corporate Tax Reform Act of 2008 provides certain new rules regarding the computation of profits, which shall broaden the tax base for corporate income tax and trade tax. *Inter alia*, the deductibility of interest expenses of the company (payable to shareholders or to third parties) may be limited to 30 percent of the company's taxable income before interest, taxes, depreciation and amortization provided that the net interest expense of the company (interest payable less interest receivable) exceeds 1 million. Non-deductible interest can be carried forward.

Taxation of Dividends

Tax must be withheld at a rate of 20 percent plus solidarity surcharge of 5.5 percent (in total 21.1 percent) on dividends paid (if any). In 2009, the rate will increase to 25 percent plus solidarity surcharge (in total 26.375 percent).

Pursuant to most German tax treaties, including the income tax treaty between Germany and the United States (the Treaty), the German withholding tax may not exceed 15 percent of the dividends received by Non-German Shareholders who are eligible for treaty benefits. The difference between the withholding tax including solidarity surcharge that was levied and the maximum rate of withholding tax permitted by an applicable tax treaty is refunded to the shareholder by the German Federal Tax Office (*Bundeszentralamt für Steuern*, An der Kuppe 1, D-53225 Bonn, Germany) upon application. Forms for a refund application are available from the German Federal Tax Office and German embassies and consulates. A further reduction applies pursuant to most tax treaties if the shareholder is a corporation which holds a stake of 25 percent or more, and in some cases (including under the Treaty) of 10 percent or more, of the registered share capital (or according to some tax treaties of the votes) of a company.

Withholding Tax Refund for U.S. Shareholders

U.S. shareholders who are eligible for treaty benefits under the Treaty (as discussed below in United States Taxation) are entitled to claim a refund of the portion of the otherwise applicable 20 percent German withholding tax and 5.5 percent solidarity surcharge on dividends that exceeds the applicable Treaty rate (generally 15 percent).

For shares or ADSs kept in custody with the Depository Trust Company in New York or one of its participating banks, the German tax authorities have introduced a collective procedure for the refund of German dividend withholding tax and solidarity surcharge thereon. Under this procedure, the Depository Trust Company may submit claims for refunds payable to U.S. shareholders under the Treaty collectively to the German tax authorities on behalf of these U.S. shareholders. The German Federal Tax Office will pay the refund amounts on a preliminary basis to the Depository Trust Company, which will redistribute these amounts to the U.S. shareholders according to the regulations governing the procedure. The Federal Tax Office may review whether the refund was made in accordance with the law within four years after making the payment to the Depository Trust Company. Details of this collective procedure are available from the Depository Trust Company. This procedure is currently permitted by German tax authorities but that permission may be revoked, or the procedure may be amended, at any time in the future.

Individual claims for refunds may be made on a special German form, which must be filed with the German Federal Tax Office (*Bundeszentralamt für Steuern*, An der Kuppe 1, D-53225 Bonn, Germany) within four years from the end of the calendar year in which the dividend is received. Copies of the required forms may be obtained from the German tax authorities at the same address or from the Embassy of the Federal Republic of Germany, 4645 Reservoir Road, NW, Washington D.C. 20007-1998. As part of the individual refund claim, a U.S. shareholder must submit to the German tax authorities the original withholding certificate (or a certified copy thereof) issued by the paying agent documenting the tax withheld and an official certification of United States tax residency on IRS Form 6166. IRS Form 6166 generally may be obtained by filing a properly completed IRS Form 8802 with the Internal Revenue

Service, P.O. Box 42530, Philadelphia, PA 19101-2530. Requests for certification must include the

Table of Contents

U.S. shareholder's name, Social Security Number or Employer Identification Number, the type of U.S. tax return filed, the tax period for which the certification is requested and a user fee of US\$35. An online payment option is also available. The Internal Revenue Service will send the certification on IRS Form 6166 to the U.S. shareholder who then must submit the certification with the claim for refund.

Taxation of Capital Gains

In case of an acquisition of shares and ADSs prior to January 1, 2009, capital gains from the disposition of such shares and ADSs realized by a Non-German shareholder other than a corporation are subject to German tax only if (i) such shareholder at any time during the five years preceding the disposition held directly or indirectly an interest of 1 percent or more in a company's issued share capital; if the shareholder has acquired the shares or ADSs without consideration, the previous owner's holding period and size of shareholding will also be taken into account, or (ii) the shareholder has acquired the shares no earlier than 12 months before the disposition. After 2008, the disposition of shares acquired after December 31, 2008 will be generally subject to German tax.

If the shareholder is an individual, one half of the capital gain realized in 2008 will generally be taxable. After 2008, 100 percent of the capital gain will be taxable, but generally at a uniform tax rate of 25 percent plus solidarity surcharge of 5.5 percent (in total: 26.375 percent). If the shareholder is a corporation, effectively 5 percent of the capital gain will generally be taxable. However, most German tax treaties, including the Treaty, provide that Non-German shareholders who are beneficiaries under the respective treaty are generally not subject to German tax even under the circumstances described in the preceding paragraph. See the discussion regarding shareholders that generally are eligible for benefits under the Treaty in *United States Taxation*, below.

Special rules may apply to certain companies of the finance or insurance sector (including pension funds) that are not protected from German tax under a tax treaty.

Inheritance and Gift Tax

Under German domestic law, the transfer of shares or ADSs will be subject to German inheritance or gift tax on a transfer by reason of death or as a gift if:

- (a) the donor or transferor or the heir, donee or other beneficiary is resident in Germany at the time of the transfer, or, if a German citizen, was not continuously outside of Germany and without German residence for more than five years; or
- (b) at the time of the transfer, the shares or ADSs are held by the decedent or donor as assets of a business for which a permanent establishment is maintained or a permanent representative is appointed in Germany; or
- (c) the decedent or donor has held, alone or together with related persons, directly or indirectly, 10 percent or more of a company's registered share capital at the time of the transfer.

The few presently existing German estate tax treaties (e.g. the Estate Tax Treaty with the United States) usually provide that German inheritance or gift tax may only be imposed in cases (a) and (b) above.

Other Taxes

There are no transfer, stamp or similar taxes which would apply to the sale or transfer of the shares or ADSs in Germany. Net worth tax is no longer levied in Germany.

United States Taxation

The following discussion is a summary of the material United States federal tax consequences of the purchase, ownership and disposition of shares or ADSs. This summary addresses only U.S. Holders (as

Table of Contents

defined below) that hold shares or ADSs as capital assets for United States federal income tax purposes and that use the U.S. dollar as their functional currency.

As used in this document, the term "U.S. Holder" means a beneficial owner of shares or ADSs that is for United States federal income tax purposes:

an individual who is a citizen or resident of the United States;

a corporation, or other entity taxable as a corporation, formed under the laws of the United States or any state thereof or the District of Columbia; or

an estate or trust, the income of which is subject to United States federal income taxation regardless of its source.

The tax consequences to a partner in a partnership holding shares or ADSs will generally depend on the status of the partner and the activities of the partnership. If you are a partner in a partnership that holds shares or ADSs, you are urged to consult your own tax advisor regarding the specific tax consequences of the purchase, ownership and disposition by the partnership of shares or ADSs.

The following summary is of a general nature and does not address all of the tax consequences that may be relevant to you if you are a member of a special class of holders, some of which may be subject to special rules, such as banks or other financial institutions, insurance companies, regulated investment companies, securities brokers-dealers, traders in securities that elect to use a mark-to-market method of accounting for security holdings, persons who are owners of an interest in a partnership or other pass-through entity that is a holder of shares or ADSs, tax-exempt entities, holders owning directly, indirectly or by attribution 10 percent or more of our voting shares, persons holding shares or ADSs as part of a hedging, straddle, conversion or constructive sale transaction or other integrated investment, persons who receive shares or ADSs as compensation, or persons who are resident in Germany for German tax purposes, hold the shares or ADSs in connection with the conduct of business through a permanent establishment in Germany, or perform personal services through a fixed base in Germany.

In addition, this summary does not discuss the tax consequences of the exchange or other disposition of foreign currency in connection with the purchase or disposition of shares or ADSs.

This summary is based on the Internal Revenue Code of 1986, as amended, its legislative history, existing and proposed regulations thereunder, published rulings and court decisions, as well as on the Treaty, all as currently in effect and all subject to change at any time, possibly with retroactive effect, or to different interpretation. There can be no assurance that the U.S. Internal Revenue Service (the "IRS") will not challenge one or more of the tax consequences described in this summary, and we have not obtained, nor do we intend to obtain, a ruling from the IRS with respect to the United States federal income tax consequences of the purchase, ownership or disposition of shares or ADSs. In addition, this discussion is based in part upon the representations of the depositary and the assumption that each obligation in the deposit agreement and any related agreement will be performed in accordance with its terms.

In general, for U.S. federal income tax purposes and for purposes of the Treaty, holders of ADSs will be treated as the owners of our shares represented by those ADSs. Exchanges of shares for ADSs, and ADSs for shares, generally will not be subject to United States federal income tax.

Taxation of Dividends

For United States federal income tax purposes, the gross amount of cash distributions (including the amount of foreign taxes, if any, withheld therefrom) paid out of our current or accumulated earnings and profits (as determined for United States federal income tax purposes) will be includible in your gross income as dividend income on the date of receipt. Dividends paid by us will be treated as foreign source income and will not be eligible for the dividends received deduction generally allowed to corporate shareholders under United States federal income tax law.

Distributions in excess of our earnings and profits will be treated, for United States federal income tax purposes, first as a nontaxable return of capital to the extent of your tax basis in the shares or ADSs, and thereafter as capital gain.

The amount of any

Table of Contents

dividend paid in a non-United States currency will be equal to the United States dollar value of the non-United States currency on the date of receipt, regardless of whether you convert the payment into United States dollars. You will have a tax basis in the non-United States currency distributed equal to such United States dollar amount. Gain or loss, if any, recognized by you on the sale or disposition of the non-United States currency generally will be United States source ordinary income or loss.

Dividend income is generally taxed as ordinary income. However, a maximum United States federal income tax rate of 15 percent will apply to qualified dividend income received by individuals (as well as certain trusts and estates) in taxable years beginning before January 1, 2011, provided that certain holding period requirements are met. Qualified dividend income includes dividends paid on shares of United States corporations as well as dividends paid on shares of qualified foreign corporations if, among other things: (i) the shares of the foreign corporation are readily tradable on an established securities market in the United States; or (ii) the foreign corporation is eligible with respect to substantially all of its income for the benefits of a comprehensive income tax treaty with the United States which contains an exchange of information program (a qualifying treaty). ADSs backed by our shares are readily tradable on an established securities market in the United States. In addition, the Treaty is a qualifying treaty. Accordingly, we believe that dividends paid by us with respect to our shares and ADSs should constitute qualified dividend income for United States federal income tax purposes, provided that the holding period requirements are satisfied and none of the other special exceptions apply.

Any foreign tax withheld from a distribution will generally be treated as a foreign income tax that you may elect to deduct in computing your United States federal taxable income or, subject to certain complex conditions and limitations which must be determined on an individual basis by each U.S. Holder, credit against your United States federal income tax liability. The limitations include, among others, rules that may limit foreign tax credits allowable with respect to specific classes of income to the United States federal income taxes otherwise payable with respect to each such class of income. Dividends paid by us generally will be foreign source income. The American Jobs Creation Act of 2004 modified the foreign tax credit rules by reducing the number of classes of foreign source income to two for taxable years beginning after December 31, 2006. Under such legislation, dividends distributed by us will generally constitute passive category income, but could, in the case of certain U.S. Holders, constitute general category income.

Taxation of Sales or Other Taxable Dispositions

Sales or other taxable dispositions by U.S. shareholders of shares or ADSs generally will give rise to capital gain or loss equal to the difference between the U.S. dollar value of the amount realized on the disposition and the U.S. shareholder's U.S. dollar basis in the shares or ADSs. Any such capital gain or loss will be a long-term capital gain or loss, subject to taxation at reduced rates for non-corporate taxpayers, if the shares or ADSs were held for more than one year. The deductibility of capital losses is subject to limitations.

Information Reporting and Backup Withholding

Dividends paid in respect of shares or ADSs, and payments of the proceeds of a sale, exchange, redemption or other disposition of shares or ADSs, paid within the United States or through certain U.S.-related financial intermediaries are subject to information reporting and may be subject to backup withholding unless the holder (i) is a corporation or other exempt recipient or (ii) provides a taxpayer identification number and certifies that no loss of exemption from backup withholding has occurred. Holders that are not U.S. persons generally are not subject to information reporting or backup withholding. However, such a holder may be required to provide a certification to establish its non-U.S. status in connection with payments received within the United States or through certain U.S.-related financial intermediaries (generally an IRS Form W-8BEN). Backup withholding is not an additional tax. Amounts withheld as backup withholding may be credited against a holder's U.S. federal income tax liability. A holder may

obtain a refund of any excess amounts withheld under the backup withholding rules by filing the appropriate claim for a refund with the IRS and furnishing any required information.

Table of Contents

United States Gift and Estate Taxes

An individual U.S. Holder generally will be subject to United States gift and estate taxes with respect to the shares or ADSs in the same manner and to the same extent as with respect to other types of personal property.

Exchange Controls and Limitations Affecting Shareholders

Germany does not currently restrict the movement of capital between Germany and other countries, except for prohibitions on the provision of financial aid or capital to certain individuals and in connection with banned weapons-related transactions to Belarus, Burma/Myanmar, Iran, Ivory Coast, Democratic Republic of the Congo, Lebanon, Liberia, Democratic People's Republic of Korea, Somalia, Sudan, Uzbekistan and Zimbabwe. Germany also imposes certain restrictions on the movement of capital to Iraq, as well as the provision of financial aid or capital to the Taliban and Al Qaeda. Similar provisions have been imposed with regard to certain individuals in order to support the mandate of the International Criminal Tribunal for the Former Yugoslavia (ICTY). These restrictions were established to coincide with resolutions adopted by the United Nations and the European Union.

More information can be found in German at: http://www.bundesbank.de/finanzsanktionen/finanzsanktionen_allgemein.php.

For statistical purposes, with some exceptions, every corporation or individual residing in Germany must report to the German Central Bank any payment received from or made to a non-resident corporation or individual if the payment exceeds 12,500 (or the equivalent in a foreign currency). Additionally, corporations and individuals residing in Germany must report to the German Central Bank any claims of a resident corporation or individual against, or liabilities payable to, a non-resident corporation or individual exceeding an aggregate of 5.0 million (or the equivalent in a foreign currency) at the end of any calendar month.

Neither German law nor our Articles of Association restrict the right of non-resident or foreign owners of shares to hold or vote the shares.

Change of Control Provisions

The credit facility executed by Infineon Technologies AG in September 2004 contains a so-called change of control clause (for further information please refer to the Notes to the Consolidated Financial Statements under No. 22). In the event of a takeover, the lenders are entitled to terminate the credit facility and to demand repayment of any outstanding sums. A change of control for this purpose shall be assumed if a third party or a group acting in concert obtains control over Infineon Technologies AG.

The subordinated convertible notes issued by our company as guarantor through its subsidiary Infineon Technologies Holding B.V. in June 2003 with a nominal value of 700 million due in 2010 and the subordinated exchangeable notes issued by our company as guarantor through its subsidiary Infineon Technologies Investment B.V. in September 2007 with a nominal value of 215 million due in 2010 (for further information see note 22 to our consolidated financial statements), each contain a change of control clause, which grants the note holders an early redemption option in the event of a change of control (as defined).

In addition, some of the cross-license agreements and development agreements of our company contain change of control clauses pursuant to which the counterparty is entitled to terminate the agreement which require the other party's approval of the change of control.

We have also entered into change of control provisions with the members of the Management Board, which are designed to protect the members of the Management Board and to contribute to their independence in the event of a change of control. For further information see Management Compensation Compensation of the Management Board Commitments to the Management Board upon Termination of Employment .

Table of Contents

Documents on Display

Our company is subject to the reporting requirements of the U.S. Securities Exchange Act of 1934, as amended (the Exchange Act). In accordance with these requirements, we file reports and other information with the U.S. Securities and Exchange Commission. These materials, including this annual report and the exhibits thereto, may be inspected and copied at the SEC's Public Reference Room at 100 F Street, N.E., Washington, DC 20549, and at the SEC's regional offices in Chicago, Illinois and New York, NY. The public may obtain information on the operation of the SEC's Public Reference Room by calling the SEC in the United States at 1-800-SEC-0330. The SEC also maintains a web site at <http://www.sec.gov> that contains reports and other information regarding registrants. Material filed by us with the SEC can also be inspected at the offices of the New York Stock Exchange at 20 Broad Street, New York, New York 10005 and at the offices of Deutsche Bank as depository for our ordinary shares, at 60 Wall Street, New York, NY 10005.

Controls and Procedures

Disclosure Controls and Procedures

Our management, with the participation of our chief executive officer and chief financial officer, evaluated the effectiveness of our company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) as of September 30, 2008. Based on this evaluation, our chief executive officer and chief financial officer concluded that, as of September 30, 2008, our company's disclosure controls and procedures were (1) designed to ensure that material information relating to Infineon, including its consolidated subsidiaries, is made known to our chief executive officer and chief financial officer by others within those entities, particularly during the period in which this report was being prepared, and (2) effective, in that they provide reasonable assurance that information required to be disclosed by Infineon in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms.

Management's Annual Report on Internal Control over Financial Reporting

Our management is also responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is defined in Rule 13a-15(f) or 15d-15(f) promulgated under the Exchange Act as a process designed by, or under the supervision of, our chief executive and chief financial officers and effected by our board, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. Generally Accepted Accounting Principles, and includes those policies and procedures that:

pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of our company;

provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of our company are being made only in accordance with authorizations of management and board of our company; and

provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our company's assets that could have a material effect on our financial statements.

Our management assessed the effectiveness of our internal control over financial reporting as of September 30, 2008. In making this assessment, our management used the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in the Internal Control Integrated Framework. Based on our assessment, management concluded that, as of September 30, 2008, our internal control over financial reporting is effective based on those criteria.

Table of Contents

The effectiveness of the Company's internal control over financial reporting as of September 30, 2008 has been audited by our independent registered public accounting firm, KPMG AG Wirtschaftsprüfungsgesellschaft (formerly KPMG Deutsche-Treuhand Aktiengesellschaft Wirtschaftsprüfungsgesellschaft). Their report thereon appears on page F-2 of this Annual Report on Form 20-F.

Changes in Internal Controls Over Financial Reporting

No change in our internal control over financial reporting occurred during the fiscal year ended September 30, 2008 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Limitations

There are inherent limitations to the effectiveness of any system of disclosure and internal controls, including the possibilities of faulty judgments in decision-making, simple error or mistake, fraud, the circumvention of controls by individual acts or the collusion of two or more people, or management override of controls. Accordingly, even an effective disclosure and internal control system can provide only reasonable assurance with respect to disclosures and financial statement preparation. Furthermore, because of changes in conditions, the effectiveness of a disclosure and internal control system may vary over time.

Audit Committee Financial Expert

Our Supervisory Board has determined that Mr. Kley and Dr. Luther are audit committee financial experts, as such term is defined by the regulations of the Securities and Exchange Commission issued pursuant to Section 407 of the Sarbanes-Oxley Act of 2002, and are independent, as such term is defined in Rule 10A-3 under the Exchange Act.

Code of Ethics

We have adopted a code of ethics (as a part of our Business Conduct Guidelines) that applies to all of our employees worldwide, including our principal executive officer, principal financial officer and principal accounting officer within the meaning of Item 16B of Form 20-F. These guidelines provide rules and conduct guidelines aimed at ensuring high ethical standards throughout our organization. You may obtain a copy of our code of ethics, at no cost, by writing to us at Infineon Technologies AG, Am Campeon 1-12, D-85579 Neubiberg, Germany, Attention: Legal Department.

Principal Accountant Fees and Services

Audit Fees. KPMG, our independent auditors, charged us an aggregate of 5.9 million in the 2007 fiscal year and 5.2 million in the 2008 fiscal year in connection with professional services rendered for the audit of our annual consolidated financial statements and of internal control over financial reporting and services normally provided by them in connection with statutory and regulatory filings or other compliance engagements. These services consisted of quarterly review engagements and the annual audit.

Audit-Related Fees. In addition to the amounts described above, KPMG charged us an aggregate of 0.6 million in the 2007 fiscal year and 1.3 million in the 2008 fiscal year for assurance and related services in connection with the performance of the audit of our annual consolidated financial statements. These services consisted of transaction and accounting advisory services, IT system audits and services related to the transition to IFRS.

Tax Fees. In addition to the amounts described above, KPMG charged us an aggregate of less than 0.1 million in the 2007 fiscal year and less than 0.1 million in the 2008 fiscal year for professional services related primarily to tax compliance.

Table of Contents

All Other Fees. Fees of 0.1 million were charged by KPMG in 2007 fiscal year and 0 million in 2008 fiscal year for other services.

The above services fall within the scope of audit and permitted non-audit services within the meaning of section 201 of the Sarbanes-Oxley Act of 2002. Our Investment, Finance and Audit Committee has pre-approved KPMG's performance of these audit and permitted non-audit services and set limits on the types of services and the maximum cost of these services in any fiscal year. KPMG reports to our Investment, Finance and Audit Committee on a quarterly basis on the type and extent of non-audit services provided during the period and compliance with these criteria.

Exemptions from the Listing Standards for Audit Committees

As permitted by the rules of the Securities and Exchange Commission, our audit committee includes one member who is a non-executive employee of our company and who is named to our Supervisory Board pursuant to the German law on employee co-determination. We believe that our reliance on this exemption from the listing standards for audit committees does not materially adversely affect the ability of our audit committee to act independently.

Material Contracts

This section provides a summary of material contracts not in the ordinary course of business to which we are a party and that have been entered into during the two immediately preceding fiscal years. The agreements described below, or English translations thereof, where applicable, have been filed as exhibits to this Annual Report on Form 20-F. Our Annual Reports on Form 20-F for the 2000 to 2007 fiscal years contain summaries of additional material contracts entered into prior to October 1, 2007, some of which may still be in effect.

Commercial Agreements

The descriptions of our joint venture and strategic alliance agreements set out under the headings Business Manufacturing Manufacturing joint venture and Business Strategic Alliances and Other Collaborations and at note 16 to our consolidated financial statements for the year ended September 30, 2008 are incorporated herein by reference.

Related Party Transactions

In addition, please see Related-Party Transactions and Relationships for a summary of contracts with certain of our related parties.

Table of Contents

GLOSSARY

200-millimeter manufacturing, 300-millimeter manufacturing	The size refers to the diameter of the wafers being processed in a front-end fab.
3G	See UMTS .
x -nanometer technology	The size refers to the structure size of the manufacturing process used in a front-end fab.
A-GPS	Assisted Global Positioning System. GPS uses a network of satellites to triangulate a receiver's position and provide latitude and longitude coordinates. Assisted GPS, or A-GPS, is a technology that uses an assistance server to cut down the time needed to find the location.
ADSL, ADSL2, ADSL2+	Asymmetric Digital Subscriber Line. A form of Digital Subscriber Line (see xDSL) in which the bandwidth available for downloading data is significantly larger than for uploading data. This technology is well suited for web browsing and client server applications as well as for emerging applications such as video on demand. There are different ADSL standards deployed differing in the downstream and upstream rates.
analog	A continuous representation of phenomena in terms of points along a scale, each point merging imperceptibly into the next. Analog signals vary continuously over a range of values. Real world phenomena, such as heat and pressure, are analog. See also digital .
ASIC	Application Specific Integrated Circuit. A logic or mixed-signal circuit designed for a specific use and for a specific customer.
ASSP	Application Specific Standard Product. A logic or mixed-signal circuit designed for a specific application market, and sold to more than one customer, and thus, standard.
Back-end	The packaging, assembly and testing stages of the semiconductor manufacturing process, which take place after electronic circuits are imprinted on silicon wafers in the front-end process.
Baseband IC	The baseband IC is an essential part of a cell phone. It includes a digital signal processor, a microcontroller, some on-chip memory, interfaces to several external devices, and mixed-signal functionality like coder/decoder for speaker and microphone.
Bit	A unit of information; a computational quantity (binary pulse) that can take one of two values, such as true and false or 0 and 1; also the smallest unit of storage sufficient to hold one bit.

Broadband	Any network technology that combines and sorts multiple, independent network frequencies onto a single cable. Commonly used to refer to high-bandwidth copper or fiber cables with a bandwidth of 1 Mbit per second and above.
CAT-iq	Cordless Advanced Technology internet and quality. CAT-iq was created by DECT forum, and allows to the standard cordless DECT phones to be used for VoIP. It is a technology made to bring together broadband internet and telephony. This convergence is also part of the fixed mobile convergence .

Table of Contents

Chip cards	Cards that contain an IC. Frequently used for telephone cards, debit cards, SIM cards, social cards, identification cards and PayTV cards.
CMOS	Complementary Metal Oxide Substrate technology. A process technology that uses complementary MOS transistors (NMOS and PMOS) to make a chip that will consume relatively low power and permit a high level of integration.
CO	Central Office. A common carrier switching office in which users' lines terminate. The nerve center of a telephone system.
Contactless chip card	In contrast to contact-based chip cards, contactless chip cards communicate with the card reader through induction technology. Contactless cards require only close proximity to an antenna to complete transaction.
CODEC	Coder/Decoder. Hardware used to code and decode digital signals.
CPE	Customer Premises Equipment. CPE is telephone or other service provider equipment, that is located on the customer's premises (physical location) rather than on the provider's premises or in between.
DDR2	A memory device with a DDR2 interface and clocked with a 400 MHz clock.
DECT	Digital Enhanced Cordless Telecommunications. A standard used for pan-European digital cordless telephones.
Digital	The representation of data by a series of bits or discrete values such as 0 and 1. See also analog.
DIMM	Dual In-line Memory Module. A memory module with contact rows on both sides. There are different standards which differ in form factor and interface specification. FB-DIMM: Fully Buffered DIMM. Often used in servers and workstations. SO-DIMM: Small outline DIMM. Often used in notebooks. Micro-DIMM: Memory module with a small form factor. Often used in sub-notebooks. VLP-DIMM: Very low-profile DIMM. Often used in server racks. Registered DIMM: Using a register (also called buffer) between the memory module and the memory controller. Often used in servers and workstations.
Discrete semiconductors	Semiconductor devices that involve only a single device like a transistor or a diode.
DigRF	

A digital interface intended for the cellular market. The DigRF standard specifies a digital serial interface between the RF transceiver and the baseband chip, which replaces the analog interface in previous generation mobile handset architectures.

DRAM

Dynamic Random Access Memory. The most common type of solid state memory. Each bit of information is stored as an amount of electrical charge in a storage cell consisting of a capacitor and a transistor. The capacitor discharges gradually due to leakage and the

Table of Contents

memory cell loses the information stored. To preserve the information, the memory has to be refreshed periodically and is therefore referred to as dynamic . DRAM is a widespread memory technology because of its high packing density and consequently low price.

DSL	See xDSL .
DVB-C, DVB-H, DVB-S, DVB-T	Digital Video Broadcasting. There are different standards available: DVB-C = Digital Video Broadcasting Cable; DVB-H = Digital Video Broadcasting Handheld; DVB-S = Digital Video Broadcasting Satellite; DVB-T = Digital Video Broadcasting Terrestrial.
ECC	Error Correction code. An error-correcting code is an algorithm for expressing a sequence of numbers such that any errors which are introduced can be detected and corrected (within certain limitations) based on the remaining numbers. ECC is used in computer systems for data transfer between the CPU and the memory as well as in almost any kind of telecommunication systems.
EDGE	Enhanced Data rate for GSM Evolution. Also referred to as 2.75G, where GSM is 2G, GPRS is 2.5G and UMTS is 3G.
Embedded DRAM, Embedded flash	A process technology that combines DRAM or flash, respectively, and logic functions on a single chip.
Ethernet	A protocol for high speed communications, principally used for LAN networks.
Fab	A semiconductor fabrication facility, in which the front-end manufacturing process takes place. (see also Front-end .)
Flash memory	A type of non-volatile memory that can be erased and reprogrammed. See NAND .
FlexRay	FlexRay is a new automotive network communications protocol. It is positioned above CAN (controller area network) and MOST (media oriented systems transport) in terms of both performance and price.
Front-end	The wafer processing stage of the semiconductor manufacturing process, in which electronic circuits are imprinted onto raw silicon wafers. This is followed by the packaging, assembly and testing stages, which comprise the back-end process.
Foundry	A semiconductor manufacturer that makes chips for third parties.
GDDR3, GDDR5	Graphic Double Data Rate. Third or fifth generation, respectively.
Gigabit (Gbit)	Approximately one billion bits; precisely 2 to the power of 30 bits.
GPRS	

General Packet Radio Services. A packet based wireless communication service that promises data rates from 56 up to 114 Kbps and continuous connection to the Internet for mobile phone and computer users. GPRS is based on GSM communication.

GSM

Global System for Mobile communication. A digital mobile telephone system that is the de facto wireless telephone standard in Europe and widely used in other parts of the world. GSM digitizes and compresses data, then sends it down a channel with two other streams of user

Table of Contents

data, each in its own time slot. It operates at either the 900 MHz or 1800 MHz frequency band.

HSDPA, HSUPA, HSPA, HSxPA	High-Speed Downlink Packet Access, High-Speed Uplink Packet Access. HSDPA and HSUPA are 3G (third generation) mobile telephony communications protocols in the High-Speed Packet Access (HSPA; sometimes referred to as HSxPA) family, which allows networks based on Universal Mobile Telecommunications System (see also UMTS) to have higher data transfer speeds and capacity. Current HSDPA deployments support down-link speeds of 1.8 Mbit/s, 3.6 Mbit/s, 7.2 Mbit/s and 14.4 Mbit/s. HSUPA deployments support up-link speeds of up to 5.76 Mbit/s.
IC	Integrated Circuit. A semiconductor device consisting of many interconnected transistors and other components like resistors, capacitors and diodes.
ISDN	Integrated Services Digital Network. A type of online connection that speeds up data transmission by handling information in a digital form. Traditional modem communications translate a computer's digital data into an analog wave form and send the signal, which then must be converted back to an analog signal. ISDN can be thought of as a direct digital connection.
ISO	International Standards Organization. The international organization responsible for developing and maintaining worldwide standards for manufacturing, environmental protection, computers, data communications, and many other fields.
LDMOS	Laterally Diffused MOS transistor. LDMOS transistors are widely used in RF/microwave power amplifiers for base-stations where the requirement is for high output power.
MCU	Microcontroller Unit. An MCU is a single chip that contains a processor, RAM, ROM, clock and I/O control unit. Hundreds of millions of MCUs are used in myriad devices ranging from automobiles, industrial applications to consumer electronics.
Megabit (Mbit)	Approximately one million bits; precisely 2^{20} bits.
Memory	Any device that can store data in machine-readable format.
Microcontroller	A microprocessor combined with memory and interfaces integrated on a single circuit and intended to operate as an embedded system.
Micron (m)	A metric unit of linear measure which equals one millionth of a meter. A human hair is about 100 microns in diameter. There are 1000 microns in 1 millimeter.
Mixed-signal IC	An integrated circuit that includes both analog and digital signal processing circuitry on a single semiconductor die. Typically, mixed-signal chips perform some whole function or sub-function in a larger assembly such as the radio subsystem of a cell phone. They often contain an entire system-on-a-chip.

MOSFET

Metal-Oxide-Substrate Field Effect Transistor. A traditional metal oxide substrate (MOS) structure is obtained by depositing a layer of silicon dioxide (SiO_2 ; referred to as oxide) and a layer of metal

Table of Contents

(polycrystalline silicon is commonly used instead of metal) on top of the wafer base material (referred to as substrate). The MOSFET is a device used to amplify or switch electronic signals. It is by far the most common field-effect transistor in both digital and analog circuits.

NAND NAND flash architecture is one of two flash technologies (the other being NOR) used in memory cards. It is also used in USB flash drives, MP3 players, and provides the image storage for digital cameras. NAND is best suited to flash devices requiring high capacity data storage.

Nanometer (nm) A metric unit of linear measure which equals one billionth of a meter. There are 1000 nanometers in 1 micron.

Non-volatile memory A memory storage device whose contents are preserved when its power is off. Most common types are NAND flash and NOR flash.

ODM Original Device Manufacturer. A company which manufactures a product which ultimately will be branded by another firm for sale.

OHSAS Occupational Health and Safety Assessment Series. The discipline concerned with protecting the safety, health and welfare of employees, organizations, and others affected by the work they undertake (such as customers, suppliers, and members of the public).

PBX Private Branch eXchange. A telephone exchange that is owned by a private business, as opposed to one owned by a common carrier or by a telephone company.

PDA Personal Digital Assistant. A term used to refer to any small mobile hand-held device that provides computing and information storage and retrieval capabilities for personal or business use, often for keeping schedule calendars and address book information handy.

PFC Perfluorinated Compounds. Compounds derived from hydrocarbons by replacement of hydrogen atoms by fluorine atoms.

PHY Physical Layer. A part of the electrical or mechanical interface to the physical medium. For example, the PHY determines how to put a stream of bits from the upper (data link) layer on to the pins for a parallel printer interface or network line card.

RAM Random access memory. A type of data storage device for which the order of access to different locations does not affect the speed of access. This is in contrast to, for example, a magnetic disk or magnetic tape where it is much quicker to access data sequentially because accessing a non sequential location requires physical movement of the storage medium rather than electronic switching.

REACH

Registration, Evaluation and Authorization of Chemicals. A framework for regulation of chemicals in the European Union.

RF transceiver

Radio-frequency transceiver. A high-frequency used in mobile telecommunications. The term radio frequency refers to electromagnetic waves having characteristics such that, if the current is input to an antenna, an electromagnetic field is generated suitable for wireless broadcasting and/or communications.

Table of Contents

RFID	Radio frequency identification. Systems that read or write data to RF tags that are present in a radio frequency field projected from RF reading/writing equipment. Data may be contained in one or more bits for the purpose of providing identification and other information relevant to the object to which the tag is attached. It incorporates the use of electromagnetic, or electrostatic coupling in the radio frequency portion of the spectrum to communicate to or from a tag through a variety of modulation schemes.
Semiconductor	Generic name for devices, such as transistors and integrated circuits, that control the flow of electrical signals. More generally a material, typically crystalline, that can be altered to allow electrical current to flow or not flow in a pattern. The most common semiconductor material for use in integrated circuits is silicon.
Server	A computer that provides some service for other computers connected to it via a network. The most common example is a file server which has a local disk and services requests from remote clients to read and write files on that disk.
Silicon	A type of semiconducting material used to make a wafer. Silicon is the most widely used semiconductor material in the semiconductor industry (other than Germanium) as a base material.
SIM card	Subscriber identification module card. Used in mobile handsets for subscriber authentication.
SLIC	Subscriber line interface circuit. A circuit in a telephone company switch to which a customer's telephone line is connected.
SO-DIMM	Small-Outline Dual In-line Memory Module. See also DIMM .
SoC	System-on-a-chip. The packaging of all the necessary electronic circuit and parts for a system (such as a cell phone or digital camera) on a single IC.
SRAM	Static RAM. A type of memory that is more expensive and much faster than DRAM but has much lower power consumption than DRAM. SRAM are used in cell phones because of low power consumption and in PCs as a fast first-level memory buffer.
Structure size	A measurement (generally in micron or nanometer) of the width of the smallest patterned feature on a semiconductor chip.
T/E	T1/E1, T3/E3. A data transmission technology based on copper wires. Various speed classes are available: T1: 1,544 Mbit/s; E1: 2,048 Mbit/s; T3: 44,736 Mbit/s; E3: 34,368 Mbit/s. The T standards are prevalent in NAFTA. The E standards are European standards.
Telematics	The combination of telecommunications and data processing.

UMTS

Universal Mobile Telecommunications Service. A so-called third-generation (3G), broadband, packet based transmission of text, digitized voice, video, and multimedia at data rates up to two megabits per second (Mbps), that is based on the GSM communication standard. UMTS aims to offer a consistent set of services to mobile computer and phone users no matter where they are located in the world.

Table of Contents

VDSL	Very high bit-rate Digital Subscriber Line. A form of digital subscriber line similar to ADSL but providing higher speeds at reduced distances. See also xDSL .
VoIP	Voice Over Internet Protocol. The routing of voice conversations over the Internet or any other IP-based network.
Wafer	A disk made of a semiconducting material such as silicon, currently usually either 150-millimeters or 200-millimeters or 300-millimeters in diameter, used to form the substrate of a chip. A finished wafer may contain several thousand chips.
WDCT	Worldwide Digital Cordless Telecommunications.
xDSL	Digital Subscriber Line (where x represents the type of technology, e.g. ADSL, VDSL, SHDSL). A family of digital telecommunications protocols designed to allow high speed data communication over existing copper telephone lines between end-users and the telephone company. See also ADSL and VDSL .
Yield	When used in connection with manufacturing, the ratio of the number of usable products to the total number of produced products.

**REPORT OF INDEPENDENT REGISTERED PUBLIC
ACCOUNTING FIRM**

The Supervisory Board of Infineon Technologies AG:

We have audited the accompanying consolidated balance sheets of Infineon Technologies AG and subsidiaries (the Company) as of September 30, 2008 and 2007, and the related consolidated statements of operations, shareholders equity, and cash flows for each of the years in the three-year period ended September 30, 2008. We also have audited the Company's internal control over financial reporting as of September 30, 2008, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these consolidated financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on these consolidated financial statements and an opinion on the Company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the consolidated financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements. Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of September 30, 2008 and 2007, and the results of its operations and its cash flows for each of the years in the three-year period ended September 30, 2008, in conformity with U.S. generally accepted accounting principles. Also in our opinion, the Company has maintained, in all material respects, effective internal control over financial reporting as of September 30, 2008, based on criteria established in *Internal*

Control Integrated Framework issued by COSO.

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

1. Description of Business and Basis of Presentation***Description of Business***

Infineon Technologies AG and its subsidiaries (collectively, Infineon or the Company) design, develop, manufacture and market a broad range of semiconductors and complete system solutions used in a wide variety of microelectronic applications, including computer systems, telecommunication systems, consumer goods, automotive products, industrial automation and control systems, and chip card applications. The Company's products include standard commodity components, full-custom devices, semi-custom devices and application-specific components for memory, analog, digital and mixed-signal applications. The Company has operations, investments and customers located mainly in Europe, Asia and North America. Effective May 1, 2006, substantially all of the memory products-related assets and liabilities, operations and activities of the Company were contributed to Qimonda AG (Qimonda), a stand-alone legal company (the Formation). References in these consolidated financial statements to Infineon Logic relate to the Company excluding Qimonda.

Basis of Presentation

The accompanying consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP). Infineon Technologies AG is incorporated in Germany. The German Commercial Code (*Handelsgesetzbuch* or HGB) requires the Company to prepare consolidated financial statements in accordance with HGB accounting principles and regulations. Pursuant to these requirements, in addition to the U.S. GAAP consolidated financial statements contained herein the Company prepared consolidated financial statements in accordance with International Financial Reporting Standards (IFRS) and its interpretations issued by the International Accounting Standards Board (IASB), as adopted by the European Union (EU) and additionally with requirements as set forth in section 315a paragraph 1 of HGB. The fiscal year-end for the Company is September 30. Beginning with the first quarter of the 2009 fiscal year, the Company will prepare its primary financial statements according to IFRS. For periods prior to the 2009 fiscal year, the Company prepared its primary financial statements according to U.S. GAAP. As part of its transition to IFRS, the Company has published IFRS consolidated financial statements for the 2007 and 2008 fiscal year as supplemental information.

All amounts herein are shown in Euro (or €) except where otherwise stated. The accompanying consolidated balance sheet as of September 30, 2008, and the consolidated statements of operations and cash flows for the year then ended are also presented in U.S. dollars (\$), solely for the convenience of the reader, at the rate of 1 € = \$1.4081, the Federal Reserve noon buying rate on September 30, 2008. The U.S. dollar convenience translation amounts have not been audited.

Certain amounts in prior year consolidated financial statements and notes have been reclassified to conform to the current year presentation. Gains and losses from sales of investments in marketable debt and equity securities, previously reported as part of the operating segment's EBIT, have been reclassified to the Corporate and Eliminations segment. In addition, during the second quarter of the 2008 fiscal year the Company committed to a plan to dispose of Qimonda. As a result, the historical results of Qimonda are reported as discontinued operations for all periods presented, and its assets and liabilities have been classified as held for disposal for all periods presented.

2. Summary of Significant Accounting Policies

The following is a summary of significant accounting policies followed in the preparation of the accompanying consolidated financial statements.

F-7

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Basis of Consolidation

The accompanying consolidated financial statements include the accounts of Infineon Technologies AG and its significant subsidiaries that are directly or indirectly controlled on a consolidated basis. Control is generally conveyed by ownership of the majority of voting rights. Additionally, the Company evaluates its relationships with entities to identify whether they are variable interest entities (VIEs), and to assess whether it is the primary beneficiary of such entities. If the determination is made that the Company is the primary beneficiary, then that entity is included in the consolidated financial statements. VIEs are entities for which either the equity investment at risk is not sufficient to permit the entity to finance its activities without additional subordinated financial support, the investors lack an essential characteristic of a controlling financial interest, or the investors' economic interests are disproportionate to the attached voting rights and substantially all of the entity's activities involve or are conducted for an investor with disproportionately few voting rights.

Investments in companies in which the Company has the ability to exercise significant influence over operating and financial policies, generally through an ownership interest of 20 percent or more and that are not controlled by the Company (Associated Companies) are accounted for using the equity method of accounting (see note 16). The equity in earnings of Associated Companies with fiscal year ends that differ by not more than three months from the Company's fiscal year end are recorded on a lag. Other equity investments (Related Companies), generally in which the Company has an ownership interest of less than 20 percent, are recorded at cost. The effects of all significant intercompany transactions are eliminated.

The Company group, including entities held for disposal, consists of the following numbers of entities:

	Consolidated entities	Associated companies	Total
September 30, 2007	69	5	74
Additions	6	4	10
Disposals	(1)	(1)	(2)
September 30, 2008	74	8	82

Reporting and Foreign Currency

The Company's reporting currency is the Euro, and therefore the accompanying consolidated financial statements are presented in Euro.

The assets and liabilities of foreign subsidiaries with functional currencies other than the Euro are translated using period-end exchange rates, while the revenues and expenses of such subsidiaries are translated using average exchange rates during the period. Differences arising from the translation of assets and liabilities in comparison with the translations reported in the previous periods are included in other comprehensive income (loss) and reported as a separate component of shareholders' equity.

The exchange rates of the primary currencies (1.00 quoted into currencies specified below) used in the preparation of the accompanying consolidated financial statements are as follows:

Currency:	Exchange Rate		Annual average exchange rate	
	September 28, 2007	September 29, 2008	2007	2008
U.S. dollar	1.4180	1.4349	1.3339	1.5052
Japanese yen	163.2900	152.3000	158.7997	161.6773

F-8

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Segment Reporting

Reporting of operating segments is based on those segments reported internally to the entity's chief operating decision-maker for purposes of allocating resources and assessing performance. Each of the segments has a segment manager reporting directly to the Company's Management Board, who has been identified as the relevant Chief Operating Decision Maker (CODM) (see note 35).

Revenue Recognition

Sales

Revenue from products sold to customers is recognized, pursuant to U.S. Securities and Exchange Commission (SEC) Staff Accounting Bulletin (SAB) 104, *Revenue Recognition* , when persuasive evidence of an arrangement exists, the price is fixed or determinable, shipment is made and collectibility is reasonably assured. The Company records reductions to revenue for estimated product returns and allowances for discounts, volume rebates and price protection, based on actual historical experience, at the time the related revenue is recognized. In general, returns are permitted only for quality-related reasons within the applicable warranty period. The Company records a provision for warranty costs as a charge to cost of sales, based on historical experience of warranty costs incurred as a percentage of net sales, because the Company's management believes that this is a reasonable estimate of potential losses to be incurred within the warranty period.

In accordance with business practice in the semiconductor industry, distributors can, in certain cases, apply for price protection. Price protection programs allow distributors to apply for a price protection credit on unsold inventory in the event the Company reduces the standard list price of the products included in such inventory. The authorization of the distributor's refund remains fully within the control of the Company. The Company calculates the provision for price protection in the same period the related revenue is recorded based on historical price trends and sales rebates, analysis of credit memo data, specific information contained in the price protection agreement, and other factors known at the time. The historical price trend represents the difference between the invoiced price and the standard list price to the distributor. The short outstanding inventory period, the visibility into the standard inventory pricing for standard products, and the long distributor pricing history have enabled the Company to reliably estimate price protection provisions at the end of the period.

In addition, distributors can, in certain cases, also apply for stock rotation and scrap allowances. Allowances for stock rotation returns are accrued based on expected stock rotation as per the contractual agreement. Distributor scrap allowances are accrued based on the contractual agreement and, upon authorization of the claim, reimbursed up to a certain maximum of the average inventory value. In some cases, rebate programs are offered to specific customers or distributors whereby the customer or distributor may apply for a rebate upon achievement of a defined sales volume. Distributors are also partially compensated for commonly defined cooperative advertising on a case-by-case basis.

License Income

License income is recognized when earned and realizable (see note 5). Lump sum payments are generally non-refundable and are deferred where applicable and recognized over the period in which the Company is obliged to provide additional service. Pursuant to Emerging Issues Task Force (EITF) Issue No. 00-21, *Revenue Arrangements with Multiple Deliverables* , revenues from contracts with multiple elements are recognized as each element is earned

based on the relative fair value of each element and when there are no undelivered elements that are essential to the functionality of the delivered elements and when the amount is not contingent upon delivery of the undelivered elements. Royalties are recognized as earned.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Grants

Grants for capital expenditures include both tax-free government grants and taxable grants for investments in property, plant and equipment. Grants receivable are established when a legal right for the grant exists and the criteria for receiving the grant have been met. Tax-free government grants are deferred and recognized over the remaining useful life of the related asset. Taxable grants are deducted from the acquisition costs of the related asset and thereby reduce depreciation expense in future periods. Certain taxable grants reduce the related expense.

Grants that are related to items in income are presented as a reduction of the related expense in the consolidated statements of operations.

Product-related Expenses

Shipping and handling costs associated with product sales are included in cost of sales. Expenditures for advertising, sales promotion and other sales-related activities are expensed as incurred. Provisions for estimated costs related to product warranties are generally made at the time the related sale is recorded, based on estimated failure rates and claim history. Research and development costs are expensed as incurred.

Income Taxes

Income taxes are accounted for under the asset and liability method pursuant to Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards (SFAS) No. 109, *Accounting for Income Taxes* . Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Valuation allowances are recorded to reduce deferred tax assets to an amount that is more-likely-than-not to be realized in the future. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date. Investment tax credits are accounted for under the flow-through method.

Effective October 1, 2007, the Company adopted FASB Interpretation No. 48, *Accounting for Uncertainty in Income Taxes – an Interpretation of FASB Statement No. 109* (FIN 48), and related guidance. FIN 48 clarifies the accounting and reporting for uncertainties in income tax law and prescribes a comprehensive model for the financial statement recognition, measurement, presentation and disclosure of uncertain tax positions taken or expected to be taken in income tax returns. FIN 48 contains a two-step approach to recognizing and measuring uncertain tax positions accounted for in accordance with SFAS No. 109. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates that it is more likely than not that the position will be sustained on audit, including resolution of any related appeals or litigation processes. The second step is to measure the tax benefit as the largest amount that is more than 50 percent likely of being realized upon ultimate settlement. As a result of the implementation of FIN 48, the Company recorded a charge to retained earnings of 4 million as of October 1, 2007 (see note 9).

Prior to October 1, 2007 the Company determined tax contingencies in accordance with SFAS No. 5, *Accounting for Contingencies* . The Company recorded estimated tax liabilities to the extent the contingencies were probable and could be reasonably estimated.

Share-based Compensation

The Company has equity-settled share-based compensation plans.

F-10

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Pursuant to SFAS No. 123 (revised 2004) *Share-Based Payment*, the Company accounts for share-based compensation using the fair value recognition provision. Under this provision, share-based compensation cost is measured at the grant date, based on the fair value of the award, and is recognized as expense over the period during which the employee is required to provide service in exchange for the award. See note 27 for further information on share-based compensation.

Issuance of shares by Subsidiaries or Associated Companies

Gains or losses arising from the issuances of shares by subsidiaries or Associated Companies, due to changes in the Company's proportionate share of the value of the issuer's equity, are recognized in earnings pursuant to SAB Topic 5:H, *Accounting for Sales of Stock by a Subsidiary*.

Cash and Cash Equivalents

Cash and cash equivalents represent cash, deposits and liquid short-term investments with original maturities of three months or less. Cash equivalents as of September 30, 2007 and 2008 were 1,023 million and 697 million, respectively, and consisted mainly of bank term deposits and fixed income securities with original maturities of three months or less.

Restricted Cash

Restricted cash includes collateral deposits used as security under arrangements for deferred compensation, business acquisitions, construction projects, leases and financing (see note 34).

Marketable Securities and Investments

The Company's marketable securities are classified as available-for-sale and are stated at fair value as determined by the most recently traded price of each security at the balance sheet date. Unrealized gains and losses are included in accumulated other comprehensive income (loss), net of applicable income taxes. Realized gains or losses and declines in value, if any, judged to be other-than-temporary on available-for-sale securities are reported in other non-operating (expense) income, net. For the purpose of determining realized gains and losses, the cost of securities sold is based on specific identification.

The Company assesses declines in the value of marketable securities and investments to determine whether such decline is other-than-temporary, thereby rendering the marketable security or investment impaired. This assessment is made by considering available evidence including changes in general market conditions, specific industry and investee data, the length of time and the extent to which the fair value has been less than cost, and the Company's intent and ability to hold the marketable security or investment for a period of time sufficient to allow for any anticipated recovery in fair value.

Inventories

Inventories are valued at the lower of cost or market, cost being generally determined on the basis of an average method. Cost consists of purchased component costs and manufacturing costs, which comprise direct material and labor costs and applicable indirect costs.

Property, Plant and Equipment

Property, plant and equipment are stated at cost less accumulated depreciation and impairment. Spare parts, maintenance and repairs are expensed as incurred. Depreciation expense is recognized using the straight-line method. Construction in progress includes advance payments for construction of fixed assets. Land and construction in progress are not depreciated. The cost of construction of certain long-term assets includes capitalized interest, which is amortized over the estimated useful life of the

F-11

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

related asset. During each of the fiscal years ended September 30, 2007 and 2008 capitalized interest was 0. The estimated useful lives of assets are as follows:

	Years
Buildings	10-25
Technical equipment and machinery	3-10
Other plant and office equipment	1-10

Leases

The Company is a lessee of property, plant and equipment. All leases where the Company is lessee that meet certain specified criteria intended to represent situations where the substantive risks and rewards of ownership have been transferred to the lessee are accounted for as capital leases pursuant to SFAS No. 13, *Accounting for Leases*, and related interpretations. All other leases are accounted for as operating leases.

Goodwill and Other Intangible Assets

The Company accounts for business combinations using the purchase method of accounting pursuant to SFAS No. 141, *Business Combinations*. Intangible assets acquired in a purchase method business combination are recognized and reported apart from goodwill, pursuant to the criteria specified by SFAS No. 141.

Intangible assets consist primarily of purchased intangible assets, such as licenses and purchased technology, which are recorded at acquisition cost, and goodwill resulting from business acquisitions, representing the excess of purchase price over fair value of net assets acquired. Intangible assets other than goodwill are amortized on a straight-line basis over the estimated useful lives of the assets ranging from 3 to 10 years. Pursuant to SFAS No. 142, *Goodwill and Other Intangible Assets*, goodwill is not amortized, but instead tested for impairment at least annually in accordance with the provisions of SFAS No. 142. The Company tests goodwill annually for impairment in the fourth quarter of the fiscal year, whereby if the carrying amount of a reporting unit with goodwill exceeds its fair value, the amount of impairment is determined as the excess of recorded goodwill over the fair value of goodwill. The determination of fair value of the reporting units and related goodwill requires considerable judgment by management.

Impairment of Long-lived Assets

The Company reviews long-lived assets, including property, plant and equipment and intangible assets subject to amortization, for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets to be held and used is measured by a comparison of the carrying amount of an asset to future net cash flows expected to be generated by the asset. If such assets are considered to be impaired, the impairment to be recognized is measured by the amount by which the carrying amount of the assets exceeds the fair value of the assets. Estimated fair value is generally based on either market value, appraised value or discounted estimated future cash flows. Considerable management judgment is necessary to estimate discounted future cash flows.

Financial Instruments

The Company operates internationally, giving rise to exposure to changes in foreign currency exchange rates. The Company uses financial instruments, including derivatives such as foreign currency forward and option contracts as well as interest rate swap agreements, to reduce this risk based on the net

F-12

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

exposure to the respective currency. The Company applies SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*, as amended, which provides guidance on accounting for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. Derivative financial instruments are recorded at their fair value and included in other current assets or other current liabilities. Changes in fair value of undesignated derivatives that relate to operations are recorded as part of cost of sales, while undesignated derivatives relating to financing activities are recorded in other non-operating income (expense), net. Changes in fair value of derivatives designated as fair value hedges and the related changes in the hedged item are reflected in earnings. Changes in the fair value of derivatives designated as cash flow hedges are, to the extent effective, deferred in accumulated other comprehensive income and subsequently reclassified to earnings when the hedging transaction is reflected in earnings and, to the extent ineffective, included in earnings immediately. The fair value of derivative and other financial instruments is discussed in note 32.

Pension Plans

The measurement of pension-benefit liabilities is based on actuarial computations using the projected-unit-credit method in accordance with SFAS No. 87, *Employers Accounting for Pensions*. The assumptions used to calculate pension liabilities and costs are shown in note 31. Prior to the adoption of the recognition provision of SFAS No. 158, *Employer's Accounting for Defined Benefit Pension and Other Postretirement Plans - an amendment of FASB Statements No. 87, 88, 106, and 132(R)*, changes in the amount of the projected benefit obligation or plan assets resulting from experience different from that assumed and from changes in assumptions could result in gains or losses not yet recognized in the Company's consolidated financial statements. Amortization of an unrecognized net gain or loss is included as a component of the Company's net periodic benefit plan cost for a year if, as of the beginning of the year, that unrecognized net gain or loss exceeds 10 percent of the greater of the projected benefit obligation or the fair value of that plan's assets. In that case, the amount of amortization recognized by the Company is the resulting excess divided by the average remaining service period of the active employees expected to receive benefits under the plan.

Effective September 30, 2007, the Company adopted the recognition provision of SFAS No. 158, whereby the Company recognizes the overfunded or underfunded status of its defined benefit postretirement plans as an asset or liability in its consolidated statement of financial position. Changes in the funded status will be recognized in the year in which the changes occur through other comprehensive income. The incremental effects of the adoption of the recognition provision on the individual line items of the September 30, 2007 consolidated balance sheet are shown in note 31.

The Company also records a liability for amounts payable under the provisions of its various defined contribution plans.

Discontinued Operations

Discontinued operations are reported when a component of an entity comprising operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity is classified as held for sale or has been disposed of, the operations and cash flows of the component will be (or have been) eliminated from the ongoing operations of the entity and the entity will not have any significant continuing involvement in the operations of the component after the disposal transaction.

Use of Estimates

The preparation of the accompanying consolidated financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure

F-13

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

of contingent amounts and liabilities at the date of the financial statements and reported amounts of revenues and expenses during the reporting period. Actual amounts could differ materially from such estimates made by management.

3. Acquisitions

During the quarter ended March 31, 2007, the Company entered into agreements with Molstanda Vermietungsgesellschaft mbH (Molstanda) and a financial institution. Molstanda is the owner of a parcel of land located in the vicinity of the Company's headquarters south of Munich. Pursuant to FASB Interpretation No. 46 (revised December 2003), *Consolidation of Variable Interest Entities – an interpretation of ARB No. 51* (FIN 46R), the Company determined that Molstanda is a variable interest entity since it does not have sufficient equity to demonstrate that it could finance its activities without additional financial support, and as a result of the agreements the Company became its primary beneficiary. Accordingly, the Company consolidated the assets and liabilities of Molstanda beginning in the 2007 fiscal year. Since Molstanda is not considered a business pursuant to FIN 46R, the \$35 million excess in fair value of liabilities assumed and consolidated of \$76 million, over the fair value of the newly consolidated identifiable assets of \$41 million, was recorded as an extraordinary loss during the second quarter of the 2007 fiscal year. Due to the Company's cumulative loss situation, no tax benefit was provided on this loss. The Company subsequently acquired the majority of the outstanding capital of Molstanda during the fourth quarter of the 2007 fiscal year. In August 2007, the Company entered into an agreement to sell part of the acquired parcel of land to a third-party developer-lessor in connection with the construction and lease of Qimonda's new headquarters office in the south of Munich.

On July 31, 2007, the Company acquired Texas Instruments Inc.'s (TI) DSL Customer Premises Equipment (CPE) business for cash consideration of \$45 million. The purchase price is subject to an upward or downward contingent consideration adjustment of up to \$16 million, based on revenue targets of the CPE business during the nine months following the acquisition date. The Company plans to continue supporting the acquired product portfolio and existing customer designs while leveraging the acquired experience in future product generations. The results of operations of the CPE business have been included in the consolidated financial statements starting August 1, 2007.

On October 24, 2007, the Company completed the acquisition of the mobility products business of LSI Corporation (LSI) for cash consideration of \$316 million (\$450 million) plus transaction costs and a contingent performance-based payment of up to \$50 million, in order to further strengthen its activities in the field of communications. The contingent performance-based payment is based on the relevant revenues in the measurement period following the completion of the transaction and ending December 31, 2008. The mobility products business develops semiconductors and software for mobile phone platform solutions. The assets acquired and liabilities assumed were recorded at their estimated fair values as of the date of acquisition. The excess of the purchase price over the estimated fair values of the underlying assets acquired and liabilities assumed was allocated to goodwill.

On April 28, 2008, the Company acquired Primarion, Inc., Torrance, California (Primarion) for cash consideration of \$32 million (\$50 million) plus a contingent performance-based payment of up to \$30 million. Primarion designs, manufactures and markets digital power integrated circuits (ICs) for computing, graphics and communication applications. The contingent performance-based payment is based on the relevant revenues in the measurement period beginning July 1, 2008 and ending June 30, 2009. The assets acquired and liabilities assumed were recorded at their estimated fair values as of the date of acquisition. The excess of the purchase price over the estimated fair values of the underlying assets acquired and liabilities assumed was allocated to goodwill.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

The following table summarizes the Company's business acquisitions during the years ended September 30, 2007 and 2008:

Acquisition Date	2007 CPE July 2007	2008 LSI October 2007	2008 Primarion April 2008
Segment	Communication Solutions	Communication Solutions (in millions)	Automotive, Industrial & Multimarket
Other current assets	6	19	1
Property, plant and equipment	1	8	1
Intangible assets:			
Technology		42	13
Customer relationships		73	
Other	7	6	
Goodwill	31	160	11
Other non-current assets			7
Total assets acquired	45	308	33
Current liabilities		(1)	(1)
Total liabilities assumed		(1)	(1)
Net assets acquired	45	307	32
In-process research & development		14	
Cash paid (purchase consideration)	45	321	32

The consolidated statements of operations include the results of the acquired businesses from the acquisition date. The Company engaged an independent third party to assist in the valuation of net assets acquired. Based on discounted estimated future cash flows over the respective estimated useful life, an amount of \$14 million was allocated to purchased in-process research and development and expensed as research and development during the 2008 fiscal year, because such costs are not capitalized under U.S. GAAP. The acquired intangible assets consist of technology assets of \$55 million and customer relationship assets of \$73 million, each with a weighted average estimated useful life of six years, and other intangible assets of \$13 million with a weighted average estimated useful life of less than one year. The goodwill amounts are expected to be deductible for tax purposes.

Pro forma financial information relating to these acquisitions is not material either individually or in the aggregate to the results of operations and financial position of the Company and has been omitted.

4. Divestitures and Discontinued Operations

Polymer Optical Fiber

On June 29, 2007, the Company sold its Polymer Optical Fiber (POF) business, based in Regensburg, Germany, to Avago Technologies Ltd. (Avago). The POF business operates in the market for automotive multimedia infotainment networks and transceivers for safety systems. As a result of the sale, the Company realized a gain before tax of 17 million which was recorded in other operating expense (income), net during the 2007 fiscal year.

High Power Bipolar Business

On September 28, 2007, the Company entered into a joint venture agreement with Siemens AG (Siemens). Effective September 30, 2007, the Company contributed all assets and liabilities of its high

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

power bipolar business (including licenses, patents, and front-end and back-end production assets) to a newly formed legal entity called Infineon Technologies Bipolar GmbH & Co. KG (Bipolar) and Siemens subsequently acquired a 40 percent interest in Bipolar for 37 million. The transaction received regulatory approval and subsequently closed on November 30, 2007. As a result of the sale, the Company realized a gain before tax of 27 million which was recorded in other operating expense (income), net during the fiscal year ended September 30, 2008. The joint venture agreement grants Siemens certain contractual participating rights which inhibit the Company from exercising control over Bipolar. Accordingly, the Company accounts for the retained interest in Bipolar under the equity method of accounting.

Hard Disk Drive Business

On April 25, 2008, the Company sold its hard disk drive (HDD) business to LSI for cash consideration of 60 million (\$95 million). The HDD business designs, manufactures and markets semiconductors for HDD devices. The Company transferred its entire HDD activities, including customer relationships, as well as know-how to LSI, and granted LSI a license for intellectual property. The transaction did not encompass the sale of significant assets or transfer of employees. As a result of this transaction, the Company realized a gain before tax of 41 million which was recorded in other operating expense (income), net during the 2008 fiscal year.

BAW Business

On August 11, 2008, the Company sold its bulk acoustic wave filter business (BAW) to Avago for cash consideration of 21 million and entered into a supply agreement through December 2009. The BAW business designs, manufactures and markets cellular duplexers for N-CDMA and W-CDMA applications and filters for GPS. The total consideration received was allocated to the elements of the transaction on a relative fair value basis. As a result, the Company realized a gain before tax of 11 million which was recorded in other operating expense (income), net during the 2008 fiscal year, and deferred 6 million which will be realized over the term of the supply agreement.

Qimonda

In conjunction with the Formation, Infineon Logic entered into contribution agreements and various other service agreements with Qimonda. In cases where physical contribution (ownership transfer) of assets and liabilities was not feasible or cost effective, the monetary value was transferred in the form of cash or debt. The contribution agreements include provisions pursuant to which Qimonda agreed to indemnify Infineon against any claim (including any related expenses) arising in connection with the liabilities, contracts, offers, incomplete transactions, continuing obligations, risks, encumbrances, guarantees and other matters relating to the memory products business that were transferred to it as part of the Formation. In addition, the contribution agreements provide for indemnification of Infineon Logic with respect to certain existing and future legal claims and potential restructuring costs. With the exception of the securities and certain patent infringement and antitrust claims identified in note 34 Qimonda is obligated to indemnify Infineon against any liability arising in connection with claims relating to the memory products business described in that section. Liabilities and risks relating to the securities class action litigation, including court costs, will be equally shared by Infineon Logic and Qimonda, but only with respect to the amount by which the total amount payable exceeds the amount of the corresponding accrual that Infineon Logic transferred to Qimonda at Formation.

On August 9, 2006 Qimonda completed its IPO on the New York Stock Exchange through the issuance of 42 million ordinary shares which are traded as American Depositary Shares (ADSs) under the symbol QI . Subsequently, Infineon

sold 6.3 million Qimonda ADSs upon exercise of the underwriters' over-allotment option. As a result, the Company's ownership interest in Qimonda decreased to 85.9 percent.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

On September 25, 2007, Infineon sold an additional 28.75 million Qimonda ADSs, which further reduced the Company's ownership interest in Qimonda to 77.5 percent.

On September 26, 2007, Infineon Technologies Investment B.V., a wholly owned subsidiary of Infineon Technologies AG, issued notes exchangeable into ADSs of Qimonda in the amount of 215 million. The coupon of the three-year exchangeable note is 1.375 percent per year. The exchange price is 10.48 for each Qimonda ADS, corresponding to an exchange premium of 35 percent. If all noteholders exercise their exchange rights, Infineon would deliver 20.5 million Qimonda ADSs, equivalent to approximately 6.0 percent of Qimonda's share capital (see notes 22 and 25).

During the 2008 fiscal year, the Company committed to a plan to dispose of Qimonda. As a result, the results of Qimonda are reported as discontinued operations in the Company's consolidated statements of operations for all periods presented, and the assets and liabilities of Qimonda have been reclassified as held for disposal in the consolidated balance sheets for all periods presented. In addition, the Company recorded after-tax write-downs totaling 1,303 million, in order to remeasure Qimonda to its estimated current fair value less costs to sell. Pursuant to SFAS No. 144, *Accounting for the Impairment or Disposal of Long-lived Assets*, the recognition of depreciation expense ceased as of March 31, 2008.

Market prices for DRAM have experienced extremely significant declines since the beginning of the 2007 calendar year. As a result of this intense pricing pressure, Qimonda continued to incur significant losses during the 2008 fiscal year, which are reflected in loss from discontinued operations, net of income tax in the Company's consolidated statements of operations. During the 2008 fiscal year, the Company also recorded material write-downs to the carrying value of Qimonda's assets to reflect them at current fair value less costs to sell. Infineon does not intend to make any further capital contributions to Qimonda and has repeatedly announced that it is seeking to dispose of its remaining 77.5 percent interest in that company.

In order to address the ongoing adverse market conditions in the memory products industry and to better enable it to meet its current obligations in the short term, Qimonda has intensively explored operational and strategic alternatives to raise and conserve cash. In furtherance of these goals, on October 13, 2008 Qimonda announced a global restructuring and cost-reduction program that is intended to reposition Qimonda in the market and substantially increase its efficiencies through a wide-ranging realignment of its business. As a part of this program, Qimonda also announced that it had agreed to sell its 35.6 percent interest in Inotera Memories Inc. to Micron Technology, Inc. for US\$400 million (approximately 296 million) in cash. This transaction closed in November 2008.

On December 21, 2008, the Company, the German Free State of Saxony, and Qimonda jointly announced a financing package for Qimonda. The package includes a 150 million loan from the German Free State of Saxony, a 100 million loan from a state bank in Portugal and a 75 million loan from Infineon Logic. In addition to this financing package, Qimonda has announced that it expects to receive guarantees totaling 280 million from the Federal Government of Germany and the Free State of Saxony. Based on such guarantees, Qimonda has announced that it is already in advanced negotiations regarding the financing of 150 million. The availability of the total financing package is contingent upon successful completion of the relevant state, federal and European Commission approval procedures as well as final agreement on the detailed terms and conditions of the transaction.

There can be no assurance that the operational, strategic, and financial measures described above will enable Qimonda to continue to meet its obligations, or that Qimonda will be successful in implementing any further operational or strategic initiatives to adequately address its financial condition. There can also be no assurance that Infineon will be

successful in disposing of its remaining interest in Qimonda. In the event that Qimonda's ongoing operational and strategic efforts fail to generate adequate cash or to result in desired operational efficiencies and resulting cash savings, Qimonda may have difficulty meeting its

F-17

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

obligations as they come due. In such a case, the financial condition and results of operations of the Company would be materially adversely affected.

In the event that Qimonda were to be unable to meet its obligations, Infineon may be exposed to certain significant liabilities related to the Qimonda business, including pending antitrust and securities law claims, the potential repayment of governmental subsidies received, and employee-related contingencies. Qimonda has accrued approximately 70 million in connection with the antitrust matters and anticipated defense costs in connection with the securities law matters. Given the uncertainty of the timing, nature, scope or success of any specific claim, Infineon is unable to meaningfully quantify its total potential exposure in respect of these matters, but Infineon is aware that such exposure, were it to arise, is likely to be material.

On November 7, 2008, the New York Stock Exchange (NYSE) notified Qimonda that it was not in compliance with the NYSE's continued listing standards because the average closing price of its ADSs had been below \$1.00 over a consecutive 30-day trading period. Over the 12-month period ended November 19, 2008, Qimonda's share price fell 98 percent, from \$8.62 to \$0.11. Qimonda has notified the NYSE that it intends to regain compliance with this listing standard. If Qimonda cannot do so by May 7, 2009, however, the NYSE has indicated that it will commence suspension and delisting procedures against Qimonda.

ALTIS

ALTIS Semiconductor S.N.C., Essonnes, France (ALTIS) is a joint venture between the Company and International Business Machines Corporation, New York, USA (IBM), with each having equal voting representation. The Company is ALTIS's primary beneficiary and fully consolidates it in accordance with FIN 46R. In August 2007, the Company and IBM signed an agreement in principle to divest their respective shares in ALTIS via a sale to Advanced Electronic Systems AG (AES). Pursuant to SFAS No. 144, the assets and liabilities of ALTIS were classified as held for disposal in the consolidated balance sheet as of September 30, 2007, and the recognition of depreciation expense ceased as of August 1, 2007. As of September 30, 2008, negotiations with AES have not progressed as previously anticipated and could not be completed. Despite the fact that negotiations are ongoing with additional parties, the outcome of these negotiations is uncertain. As a result, the Company reclassified the disposal group's assets and liabilities previously classified as held for sale into held and used in the consolidated balance sheet as of September 30, 2008. Upon reclassification, an adjustment of 59 million was recorded in loss from continuing operations, resulting from the measurement of the disposal group at the lower of its carrying amount before being classified as held for sale, adjusted for any depreciation and amortization expense that would have been recognized had the disposal group been continuously classified as held and used, and its fair value at the date of the reclassification.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

At September 30, 2007 and 2008, the carrying amounts of the major classes of assets and liabilities classified as held for disposal were as follows:

	September 30, 2007	September 30, 2008
	(in millions)	
Cash and cash equivalents	746	432
Marketable securities	265	
Trade accounts receivable, net	397	180
Inventories	659	289
Property, plant and equipment, net	2,350	2,059
Long-term investments	628	16
Other assets	608	551
Subtotal	5,653	3,527
Write-down		(1,303)

Total		20	79

5. Licenses

During the years ended September 30, 2006, 2007 and 2008, the Company recognized revenues related to license and technology transfer fees of 21 million, 20 million, and 54 million, respectively, which are included in net sales in the accompanying consolidated statements of operations. Included in these amounts are previously deferred license fees of 1 million, 1 million, and 1 million which were recognized as revenue pursuant to SAB 104 in the years ended September 30, 2006, 2007 and 2008, respectively, since the Company had fulfilled all of its obligations and the amounts were realized.

6. Grants

The Company has received economic development funding from various governmental entities, including grants for the construction of manufacturing facilities, as well as grants to subsidize research and development activities and employee training. Grants and subsidies included in the accompanying consolidated financial statements during the fiscal years ended September 30, 2006, 2007 and 2008, are as follows:

	2006	2007 (in millions)	2008
Included in the consolidated statements of operations:			
Research and development	49	91	62
Cost of sales	5	31	26
	54	122	88

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Deferred government grants amounted to 37 million and 31 million as of September 30, 2007 and 2008, respectively. The amounts of grants receivable as of September 30, 2007 and 2008 were 25 million and 25 million, respectively.

7. Supplemental Operating Cost Information

The costs of services and materials are as follows for the years ended September 30:

	2006	2007 (in millions)	2008
Raw materials, supplies and purchased goods	852	790	813
Purchased services	912	776	822
Total	1,764	1,566	1,635

Personnel expenses are as follows for the years ended September 30:

	2006	2007 (in millions)	2008
Wages and salaries	1,316	1,317	1,475
Social levies	223	237	242
Pension expense (note 31)	31	34	17
Total	1,570	1,588	1,734

Other operating expense (income), net was as follows for the years ended September 30:

	2006	2007 (in millions)	2008
Gains on sales of businesses and interests in subsidiaries		19	79
Goodwill and intangible assets impairment charges	(32)	(2)	(8)
Long-lived asset impairment charges	(4)	(4)	(122)
Litigation settlement charges, net of recoveries (note 34)	(7)		
Other	7	7	8
Other operating (expense) income, net	(36)	20	(43)

Litigation settlement charges refer to the settlement of an antitrust investigation by the U.S. Department of Justice and related settlements with customers (see note 34).

Total rental expenses under operating leases amounted to 135 million, 115 million and 98 million for the years ended September 30, 2006, 2007 and 2008, respectively.

F-21

 Qimonda	 11,003	 12,775	 12,990
 Total	 41,066	 42,549	 42,455

8. Restructuring

During the 2006 fiscal year, restructuring plans were announced to downsize the workforce at ALTIS and the Company's chip card back-end activities in order to maintain competitiveness and reduce cost. As part of these restructuring measures, the Company agreed upon plans to terminate approximately 390 employees and recorded restructuring charges in the 2007 fiscal year.

During the 2007 fiscal year, restructuring measures were taken by the Company, mainly as a result of the insolvency of one of its largest mobile phone customers, BenQ Mobile GmbH & Co. OHG, and in order to further streamline certain research and development locations. Approximately 280 jobs were affected worldwide, of which approximately 120 were in the German locations Munich, Salzgitter and Nuremberg.

To address rising risks in the current market environment, adverse currency trends and below benchmark margins, the Company implemented the IFX10+ cost-reduction program in the third quarter of the 2008 fiscal year. The IFX10+ program includes measured target areas including product portfolio management, manufacturing costs reduction, value chain optimization, process efficiency, reorganization of the Company's structure along its target markets, and reductions in workforce. Approximately 10 percent of Infineon Logic's worldwide workforce is expected to be impacted by IFX10+.

During the years ended September 30, 2006, 2007 and 2008, charges of 23 million, 45 million and 181 million, respectively, were recognized as a result of the above-mentioned restructuring initiatives.

The development of the restructuring liability during the fiscal year ended September 30, 2008 was as follows:

September 30,

September 30,

	2007 Liability	Restructuring Charges, net (in millions)	Payments	2008 Liability
Employee terminations	38	170	(36)	172
Other exit costs	6	11	(7)	10
Total	44	181	(43)	182

9. Income Taxes

Income (loss) from continuing operations before income taxes, extraordinary loss, and minority interest is attributable to the following geographic locations for the years ended September 30, 2006, 2007 and 2008, as follows:

	2006	2007	2008
		(in millions)	
Germany	(318)	(150)	(208)
Foreign	122	196	120
Income (loss) from continuing operations before income taxes, extraordinary loss, and minority interest	(196)	46	(88)

Income tax expense (benefit) from continuing operations for the years ended September 30, 2006, 2007 and 2008, was as follows:

	2006	2007	2008
		(in millions)	
Current taxes:			
Germany	63	24	3
Foreign	13	3	31
	76	27	34
Deferred taxes:			
Germany	(42)	40	64
Foreign	13	2	(37)
	(29)	42	27
Income tax expense	47	69	61

Total income taxes from continuing operations for the years ended September 30, 2006, 2007 and 2008 were allocated as follows:

2006	2007	2008
	(in millions)	

Income tax expense	47	69	61
Shareholder's equity, for other comprehensive loss (income)		2	(1)
	47	71	60

The Company's corporate statutory tax rate in Germany is 25 percent in the 2006 and 2007. Additionally, a solidarity surcharge of 5.5 percent is levied. The trade tax rate is 11 percent in 2006 and 2007. The combined statutory tax rate was 37 percent in 2006 and 2007.

On August 17, 2007 the Business Tax Reform Act 2008 was enacted in Germany including several changes to the taxation of German business activities, including a reduction of the Company's combined statutory corporate and trade tax rate in Germany to 28 percent, which comprises corporate tax of 15 percent plus a solidarity surcharge of 5.5 percent and trade tax of 12 percent. Most of the changes came into effect for the Company in its 2008 fiscal year. Pursuant to SFAS No. 109, the Company recorded a deferred tax charge of \$28 million as of September 30, 2007, reflecting the reduction in value of the Company's deferred tax assets in Germany upon enactment.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Effective October 1, 2007, the Company adopted FIN 48 (see note 2). The total amount of gross unrecognized tax benefits from uncertain tax positions, is as follows:

	2008 (in millions)
Balance as of October 1, 2007	138
Additions based on tax positions related to the current year	1
Additions for tax positions of prior years	124
Reductions for tax positions of prior years	(2)
Settlements	
Balance as of September 30, 2008	261

The additions for tax positions of prior years relate mainly to filing of amended tax returns for prior periods. Uncertain tax positions, which, if recognized, would favorably affect the Company's effective tax rate amount to 68 million and 83 million as of September 30, 2007 and 2008, respectively.

The Company has accrued interest and penalties related to income tax liabilities of 4 million as of October 1, 2007. During the fiscal year ended September 30, 2008, the Company recognized accrued interest and penalties related to income tax liabilities in an amount of 3 million. Interest and penalties related to income tax liabilities are included in interest expense, net and other non-operating income (expense), net, respectively.

The Company's German and foreign tax returns are periodically examined by tax authorities, and several entities of the consolidated group are currently subject to such an examination. Generally, the Company's German tax returns from fiscal year 2002 onwards remain subject to examination by tax authorities. Although the timing of the resolution of tax authority examinations is uncertain, it is reasonably possible that the balance of gross unrecognized tax benefits could change within the next 12 months as a result of such ongoing and future examinations.

A reconciliation of income taxes for the fiscal years ended September 30, 2006, 2007 and 2008, determined using the German corporate tax rate plus trade taxes, net of federal benefit, for a combined statutory rate of 37 percent for 2006 and 2007 and 28 percent for 2008 is as follows:

	2006	2007	2008
		(in millions)	
Expected expense (benefit) for income taxes	(76)	17	(25)
Increase in available tax credits	(38)	(7)	(103)
Non-taxable investment income	(4)	(3)	
Tax rate differential	(12)	(59)	(10)
Non deductible expenses	7	24	8
Change in German tax rate	3	28	

Increase in valuation allowance	161	58	185
Other	6	11	6
Actual provision for income taxes	47	69	61

In the 2006 fiscal year, the Company reached an agreement with German tax authorities on certain tax matters relating to prior years. As a result, the timing of the deductibility of certain temporary differences was revised, which led to an increase in the valuation allowance for the 2006 fiscal year in the amount of 50 million.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Deferred income tax assets and liabilities as of September 30, 2007 and 2008 relate to the following:

	2007	2008
	(in millions)	
Deferred tax assets:		
Intangible assets	13	8
Property, plant and equipment	134	152
Deferred income	13	12
Net operating loss and tax credit carry-forwards	1,131	1,199
Other items	179	210
Gross deferred tax assets	1,470	1,581
Valuation allowance	(846)	(1,013)
Deferred tax assets, net	624	568
Deferred tax liabilities:		
Property, plant and equipment	(34)	(24)
Accounts receivable	(26)	(23)
Accrued liabilities and pensions	(110)	(103)
Other items	(7)	(5)
Deferred tax liabilities	(177)	(155)
Deferred tax assets, net	447	413

Net deferred income tax assets and liabilities presented in the accompanying consolidated balance sheets as of September 30, 2007 and 2008, are as follows:

	2007	2008
	(in millions)	
Deferred tax assets:		
Current	34	26
Non-current	446	402
Deferred tax liabilities:		
Current	(10)	(12)
Non-current	(23)	(3)
Deferred tax assets, net	447	413

At September 30, 2008, the Company had in Germany tax loss carry-forwards of 3,029 million (relating to both trade and corporate tax, plus an additional loss carry-forward applicable only to trade tax of 1,231 million). In connection with the Formation of Qimonda, the net operating losses related to the memory products segment have been retained by Infineon Technologies AG. In other jurisdictions the Company had tax loss carry-forwards of 102 million and tax effected credit carry-forwards of 175 million. Such tax loss carry-forwards and tax effected credit carry-forwards are generally limited to use by the particular entity that generated the loss or credit and do not expire under current law. The benefit for tax credits is accounted for on the flow-through method when the individual legal entity is entitled to the claim.

Pursuant to SFAS No. 109, the Company has assessed its deferred tax asset and the need for a valuation allowance. Such an assessment considers whether it is more likely than not that some portion or all of the deferred tax assets may not be realized. The assessment requires considerable judgment on the part of management, with respect to, among other factors, benefits that could be realized from available tax strategies and future taxable income, as well as other positive and negative factors. The ultimate realization of deferred tax assets is dependent upon the Company's ability to generate the appropriate character of future taxable income sufficient to utilize loss carry-forwards or tax credits before their

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

expiration. Since the Company had incurred a cumulative loss in certain tax jurisdictions over a three-year period as of September 30, 2008, which is significant evidence that the more likely than not criterion is not met pursuant to the provisions of SFAS No. 109, the impact of forecasted future taxable income is excluded from such an assessment. For these tax jurisdictions, the assessment was therefore only based on the benefits that could be realized from available tax strategies and the reversal of temporary differences in future periods. As a result of this assessment, the Company increased the deferred tax asset valuation allowance as of September 30, 2006, 2007 and 2008 by 161 million,

58 million, and 185 million, respectively, to reduce the deferred tax asset to an amount that is more likely than not expected to be realized in future.

The changes in valuation allowance for deferred tax assets during the years ended September 30, 2007 and 2008 were as follows:

	2007	2008
	(in millions)	
Balance, beginning of the year	1,017	846
Applicable to continuing operations	58	185
Change in tax rate	(264)	
Adjustment in corresponding net operating loss carry-forward	35	(18)
Balance, end of the year	846	1,013

In the 2007 and 2008 fiscal years, the Company recorded adjustments to certain net operating loss carry-forwards mainly as a result of tax assessment reconciliations and adjustments in connection with the adoption of FIN 48. As the adjustments were made in jurisdictions in which the Company is in cumulative loss positions, such adjustments were recorded directly to the valuation allowance and approximated 35 million and 18 in the 2007 and 2008 fiscal years, respectively.

The Company did not provide for income taxes or foreign withholding taxes on cumulative earnings of foreign subsidiaries as of September 30, 2007 and 2008, as these earnings are intended to be indefinitely reinvested in those operations. It is not practicable to estimate the amount of unrecognized deferred tax liabilities for these undistributed foreign earnings.

The Company reorganized certain businesses in different tax jurisdictions which resulted in deferred intercompany transactions. As of September 30, 2007 and 2008, deferred tax charges related to these transactions amounted to 56 million and 47 million, respectively, of which 50 million and 41 million, respectively are non-current (see note 17).

10. Earnings (Loss) Per Share

Basic earnings (loss) per share (EPS) is calculated by dividing net loss by the weighted average number of ordinary shares outstanding during the year. Diluted EPS is calculated by dividing net income by the sum of the weighted average number of ordinary shares outstanding plus all additional ordinary shares that would have been outstanding if potentially dilutive instruments or ordinary share equivalents had been issued.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

The computation of basic and diluted EPS for the years ended September 30, 2006, 2007 and 2008, is as follows:

	2006	2007	2008
Numerator (in millions):			
Loss from continuing operations	(250)	(37)	(135)
Loss from discontinued operations, net of tax	(18)	(296)	(2,987)
Loss before extraordinary loss	(268)	(333)	(3,122)
Extraordinary loss, net of tax		(35)	
Net loss	(268)	(368)	(3,122)
Denominator (shares in millions):			
Weighted-average shares outstanding basic and diluted	747.6	748.6	749.7
Basic and diluted loss per share (in)::			
Loss from continuing operations	(0.34)	(0.05)	(0.18)
Loss from discontinued operations, net of tax	(0.02)	(0.40)	(3.98)
Loss before extraordinary loss	(0.36)	(0.45)	(4.16)
Extraordinary loss, net of tax		(0.04)	
Net loss	(0.36)	(0.49)	(4.16)

The weighted average of potentially dilutive instruments that were excluded from the diluted loss per share computations, because the exercise price was greater than the average market price of the ordinary shares during the period or were otherwise not dilutive, includes 46.7 million, 41.2 million and 34.3 million shares underlying employee stock options for the years ended September 30, 2006, 2007 and 2008, respectively. Additionally, 86.5 million, 74.7 million and 65.0 million ordinary shares issuable upon the conversion of the convertible subordinated notes for the years ended September 30, 2006, 2007 and 2008, respectively, were not included in the computation of diluted earnings (loss) per share as their impact would have been antidilutive.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

11. Marketable Securities

Marketable securities at September 30, 2007 and 2008 consist of the following:

	2007				2008			
	Cost	Fair Value	Unrealized Gains	Unrealized Losses	Cost	Fair Value	Unrealized Gains	Unrealized Losses
	(in millions)							
Foreign government securities	8	10	2		5	7	2	
Floating rate notes								
Fixed term deposits	220	211		(9)	159	149	1	(11)
Other debt securities	15	18	3					
Total debt securities	243	239	5	(9)	164	156	3	(11)
Equity securities	4	5	1		2	2		
Total marketable securities	247	244	6	(9)	166	158	3	(11)
Reflected as follows:								
Marketable securities	219	210		(9)	154	143		(11)
Other assets (note 17)	28	34	6		12	15	3	
Total marketable securities	247	244	6	(9)	166	158	3	(11)

Unrealized losses relating to securities held for more than 12 months as of September 30, 2007 and 2008, were 9 million and 11 million respectively.

Realized gains (losses) on sales of marketable securities are reflected as other non-operating income (expense), net and were as follows for the years ended September 30:

	2006	2007	2008
	(in millions)		
Realized gains	3	7	
Realized losses			(1)
Realized gains (losses), net	3	7	(1)

As of September 30, 2008, there were no significant fixed term deposits with contractual maturities between three and twelve months.

Debt securities as of September 30, 2008 had the following remaining contractual maturities:

	Cost	Fair Value
	(in millions)	
Less than 1 year	5	6
Between 1 and 5 years	94	84
More than 5 years	65	66
Total debt securities	164	156

Actual maturities may differ due to call or prepayment rights.

12. Trade Accounts Receivable, net

Trade accounts receivable at September 30, 2007 and 2008 consist of the following:

	2007	2008
	(in millions)	
Third party trade	583	590
Associated and Related Companies trade	68	28
Trade accounts receivable, gross	651	618
Allowance for doubtful accounts	(31)	(29)
Trade accounts receivable, net	620	589

Activity in the allowance for doubtful accounts for the years ended September 30, 2007 and 2008 was as follows:

	2007	2008
	(in millions)	
Allowance for doubtful accounts at beginning of year	45	31
Recovery of bad debt, net	(14)	(2)
Allowance for doubtful accounts at end of year	31	29

13. Inventories

Inventories at September 30, 2007 and 2008 consist of the following:

	2007	2008
	(in millions)	
Raw materials and supplies	59	59
Work-in-process	354	372
Finished goods	185	232
Total Inventories	598	663

14. Other Current Assets

Other current assets at September 30, 2007 and 2008 consist of the following:

	2007	2008
	(in millions)	
VAT and other tax receivables	87	95
Grants receivable (note 6)	25	25
Associated and Related Companies financial and other receivables	79	23
Third party financial and other receivables	22	17
Receivable from German bank's deposit protection fund		121
Financial instruments (note 32)	27	10
Prepaid expenses	30	44
License fees receivable	2	10
Employee receivables	5	8
Other	26	26
Total other current assets	303	379

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Cash and cash equivalents and marketable securities in the amount of 121 million were reclassified to accounts receivable from the German bank's deposit protection fund as of September 30, 2008.

15. Property, Plant and Equipment, net

A summary of activity for property, plant and equipment for the years ended September 30, 2007 and 2008, is as follows:

	Land and buildings	Technical equipment and machinery	Other plant and office equipment (in millions)	Construction in progress	Total
Cost:					
September 30, 2007	687	4,655	1,416	144	6,902

Additions	21	1	22
Disposals	(7)	(3)	(10)
Impairments		(2)	(2)
Equity in earnings	4		4
Reclassifications		(5)	(5)
Balance at September 30, 2008	18	15	33

On September 28, 2007, Infineon entered into a joint venture agreement with Siemens, whereby the Company contributed its high power bipolar business to the newly formed legal entity Bipolar, and Siemens subsequently acquired a 40 percent interest in Bipolar. The joint venture agreement grants Siemens certain contractual participating rights which inhibit the Company from exercising control over Bipolar. Accordingly, the Company accounted for the retained interest in Bipolar of 60 percent under the equity method of accounting (see note 4).

The Company recognized impairment charges related to certain investments for which the carrying value exceeded the fair value on an other-than-temporary basis of 13 million, 2 million, and 2 million during the years ended September 30, 2006, 2007 and 2008, respectively.

There was no goodwill included in the amount of long-term investments at September 30, 2007 and 2008, respectively.

Edgar Filing: INFINEON TECHNOLOGIES AG - Form 20-F

For the Associated Companies as of September 30, 2008, the aggregate summarized financial information for the fiscal years 2006, 2007 and 2008, is as follows:

	2006	2007	2008
		(in millions)	
Sales	9	6	95
Gross profit	7	3	20
Net income (loss)	(6)	1	6

Carrying value September 30, 2007	53	36	89
Carrying value September 30, 2008	225	137	362

- (1) Amounts shown as transfers in the year ended September 30, 2008 relate primarily to assets of the ALTIS disposal group that were reclassified into held and used.

The estimated aggregate amortization expense relating to other intangible assets for each of the five succeeding fiscal years is as follows: 2009 31 million; 2010 28 million; 2011 28 million; 2012 26 million; and 2013 23 million.

During the years ended September 30, 2006, 2007 and 2008, the Company recognized intangible assets impairment charges of 32 million, 2 million, and 8 million respectively.

During the year ended September 30, 2006, partially as a result of the insolvency of one of the Company's largest mobile phone customers, BenQ Mobile GmbH & Co. OHG, the Company concluded that sufficient indicators existed to require an assessment of whether the carrying values of goodwill and certain other intangible assets principally in reporting units within the Communication Solutions segment might not be recoverable. Recoverability of these intangible assets was measured by a comparison of the carrying amount of the assets to the future net cash flows expected to be generated by the assets.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Impairments of 38 million were recognized in other operating expense (income), net, representing the amount by which the carrying amount of the assets exceeded their fair value.

During the years ended September 30, 2007 and 2008, the Company did not recognize any impairments of goodwill.

19. Trade Accounts Payable

Trade accounts payable at September 30, 2007 and 2008 consist of the following:

	2007	2008
	(in millions)	
Third party trade	527	473
Associated and Related Companies trade	69	15
Total	596	488

20. Accrued Liabilities

Accrued liabilities at September 30, 2007 and 2008 consist of the following:

21. Other Current Liabilities

Other current liabilities at September 30, 2007 and 2008 consist of the following:

	2007	2008
	(in millions)	
Deferred income	37	26
VAT and other taxes payable	82	100
Obligations to employees	90	197
Deferred government grants (note 6)	20	17
Financial instruments (note 32)	34	25
Interest	19	16
Settlement for anti-trust related matters (note 34)	20	20
Associated and Related Companies financial and other payables	12	6
Other	12	28
Total	326	435

Other deferred income includes amounts relating to license income (see note 5) and deferred revenue. The non-current portion is included in other liabilities (see note 24).

22. Debt

Debt at September 30, 2007 and 2008 consists of the following:

	2007	2008
	(in millions)	
Short-term debt and current maturities:		
Loans payable to banks, weighted average rate 5.1%	127	139
Current portion of long-term debt	133	68
Total short-term debt and current maturities	260	207
Long-term debt:		
Exchangeable subordinated notes, 1.375%, due 2010	215	215
Convertible subordinated notes, 5.0%, due 2010	695	597
Loans payable to banks:		
Unsecured term loans, weighted average rate 4.82%, due 2009 - 2013	214	217
Secured term loans, weighted average rate 2.45%, due 2013	4	2

Notes payable to governmental entity, due 2010	21	20
Total long-term debt	1,149	1,051

Short-term loans payable to banks consist primarily of borrowings under the terms of short-term borrowing arrangements.

On September 26, 2007, the Company (as guarantor), through its subsidiary Infineon Technologies Investment B.V. (as issuer), issued 215 million in exchangeable subordinated notes due 2010 at par in an underwritten offering to institutional investors in Europe. The notes accrue interest at 1.375 percent per year. The notes are exchangeable into a maximum of 20.5 million Qimonda ADSs, at an exchange price of 10.48 per ADS any time during the exchange period, as defined, through maturity, corresponding to an exchange premium of 35 percent. The notes are unsecured and rank pari passu with all present and future unsecured subordinated obligations of the issuer. The noteholders have a negative pledge relating to future capital market indebtedness, as defined, and an early redemption option in the event of a change of

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

control, as defined. The Company may, at its option, redeem the outstanding notes in whole, but not in part, at the principal amount thereof together with accrued interest to the date of redemption, if the issuer has determined that, as a result of a publicly announced transaction, there is a substantial likelihood that the aggregate ownership of the share capital of Qimonda by the issuer, the guarantor and any of their respective subsidiaries will be less than 50 percent plus one share. In addition, the Company may, at its option, redeem the outstanding notes in whole, but not in part, at their principal amount together with interest accrued to the date of redemption, if the share price of the ADSs on each of 15 trading days during a period of 30 consecutive trading days commencing on or after August 31, 2009, exceeds 130 percent of the exchange price. The exchangeable notes are listed on the Frankfurt Stock Exchange. At September 30, 2008, unamortized debt issuance costs amounted to 4 million. Concurrently with this transaction, the Company loaned an affiliate of J.P. Morgan Securities Inc. 3.6 million Qimonda ADSs ancillary to the placement of the exchangeable subordinated notes. The affiliate of J.P. Morgan Securities Inc. sold these ADSs as part of the Qimonda ADSs sale on September 25, 2007. On October 25, 2007, 1.3 million Qimonda ADSs that had been borrowed were returned to the Company and the remaining 2.3 million Qimonda ADSs were returned to the Company on January 4, 2008.

On June 5, 2003, the Company (as guarantor), through its subsidiary Infineon Technologies Holding B.V. (as issuer), issued 700 million in convertible subordinated notes due 2010 at par in an underwritten offering to institutional investors in Europe. The notes are convertible, at the option of the holders of the notes, into a maximum of 68.4 million ordinary shares of the Company, at a conversion price of 10.23 per share through maturity. The notes accrue interest at 5.0 percent per year. The notes are unsecured and rank pari passu with all present and future unsecured subordinated obligations of the issuer. The noteholders have a negative pledge relating to future capital market indebtedness, as defined. The noteholders have an early redemption option in the event of a change of control, as defined. A corporate reorganization resulting in a substitution of the guarantor shall not be regarded as a change of control, as defined. The Company may redeem the convertible notes after three years at their principal amount plus interest accrued thereon, if the Company's share price exceeds 125 percent of the conversion price on 15 trading days during a period of 30 consecutive trading days. The convertible notes are listed on the Luxembourg Stock Exchange. On September 29, 2006 the Company (through the issuer) irrevocably waived its option to pay a cash amount in lieu of the delivery of shares upon conversion. During the 2008 fiscal year, the Company repurchased a notional amount of 100 million of its convertible subordinated notes due 2010. The transaction resulted in a net gain of 2 million before tax, which was recognized in interest expense, net. The repurchase was made out of available cash. At September 30, 2008, the outstanding notional amount was 600 million and unamortized debt issuance costs amounted to 3 million.

Concurrently with the issuance of \$248 million in convertible notes due 2013 by Qimonda (as guarantor) through its subsidiary Qimonda Finance LLC (as issuer) on February 12, 2008, Infineon loaned Credit Suisse International 20.7 million Qimonda ADSs ancillary to the placement of the convertible notes, which remained outstanding as of September 30, 2008.

In September 2004, the Company executed a \$400/ 400 million syndicated credit facility with a five-year term, which was subsequently reduced to \$345/ 300 million in August 2006. The facility consists of two tranches. Tranche A is a term loan originally intended to finance the expansion of the Richmond, Virginia, manufacturing facility. In January 2006, the Company drew \$345 million under Tranche A, on the basis of a repayment schedule that foresees equal installments falling due in March and September each year. At September 30, 2008, \$125 million was outstanding under Tranche A. Tranche B, which is a multicurrency revolving facility to be used for general corporate purposes, remained undrawn at September 30, 2008. The facility has customary financial covenants, and drawings bear interest at market-related rates that are linked to financial performance. The lenders of this credit facility have been granted a

negative pledge relating to the future financial indebtedness of the Company with certain permitted encumbrances.

F-36

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

The Company has established independent financing arrangements with several financial institutions, in the form of both short- and long-term credit facilities, which are available for various funding purposes.

Term	Nature of financial Institution Commitment	Purpose/intended use	As of September 30, 2008		
			Aggregate facility	Drawn (in millions)	Available
Short-term	firm commitment	general corporate purposes, working capital, guarantees	504	139	365
Short-term	no firm commitment	working capital, cash management	176		176
Long-term ⁽¹⁾	firm commitment	project finance	307	307	
Total			987	446	541

⁽¹⁾ Including current maturities.

At September 30, 2008, the Company was in compliance with its debt covenants under the relevant facilities.

Interest expense for the years ended September 30, 2006, 2007 and 2008 was 65 million, 77 million and 71 million, respectively.

Aggregate amounts of debt maturing subsequent to September 30, 2008 are as follows:

Fiscal year ending September 30,	Amount (in millions)
2009	207
2010	861
2011	82
2012	68
2013	40
Total	1,258

23. Long-term Accrued Liabilities

Long-term accrued liabilities at September 30, 2007 and 2008 consist of the following:

	2007	2008
	(in millions)	
Asset retirement obligations	13	9
Post-retirement benefits	3	3
Personnel costs	6	7
Other		5
Total	22	24

24. Other Liabilities

Other non-current liabilities at September 30, 2007 and 2008 consist of the following:

	2007	2008
	(in millions)	
Deferred income	30	43
Deferred government grants (note 6)	17	14
Settlement for antitrust related matters (note 34)	37	17
Deferred compensation	13	11
Other	11	15
Total	108	100

25. Minority Interest

ALTIS is a joint venture between the Company and IBM, with each having equal voting representation. In December 2005, the Company further amended its agreements with IBM in respect of the ALTIS joint venture and began to fully consolidate ALTIS, whereby IBM's 50 percent ownership interest is reflected as minority interest (see note 4).

Effective May 1, 2006, the Company contributed substantially all of the operations of its memory products segment, including the assets and liabilities that were used exclusively for these operations, to Qimonda, a stand-alone legal company. On August 9, 2006, Qimonda completed an initial public offering on the New York Stock Exchange through the issuance of 42 million ADSs which are traded under the symbol "QI", for an offering price of \$13 per ADS. In addition, the Company sold 6.3 million Qimonda ADSs upon exercise of the underwriters' over-allotment option. As a result of these transactions, the Company reduced its shareholding in Qimonda to 85.9 percent. During the fourth quarter of the 2007 fiscal year, Infineon sold an additional 28.75 million Qimonda ADSs (including underwriters' over-allotment option), further reducing its ownership interest in Qimonda to 77.5 percent. The minority investors' ownership interest in Qimonda of 22.5 percent as of September 30, 2007 and 2008 is reflected as minority interest (see note 4).

26. Ordinary Share Capital

As of September 30, 2008 the Company had 749,742,085 registered ordinary shares, notional value of 2.00 per share, outstanding. During the years ended September 30, 2007 and 2008 the Company increased its share capital by 4 million and 0 million, respectively, by issuing 2,119,341 and 13,450 ordinary shares, respectively, in connection with the Company's Long-Term Incentive Plans.

Authorized and Conditional Share Capital

In addition to the issued share capital, the Company's Articles of Association authorize the Management Board to increase the ordinary share capital with the Supervisory Board's consent by issuing new shares. As of September 30,

2008, the Management Board may use these authorizations to issue new shares as follows:

Through January 19, 2009, Authorized Share Capital II/2004 in an aggregate nominal amount of up to 30 million to issue shares to employees (in which case the pre-emptive rights of existing shareholders are excluded).

Through February 14, 2012, Authorized Share Capital 2007 in an aggregate nominal amount of up to 224 million to issue shares for cash, where the pre-emptive rights of shareholders may be

F-38

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

partially excluded, or in connection with business combinations (contributions in kind), where the pre-emptive rights of shareholders may be excluded for all shares.

The Company has conditional capital of up to an aggregate nominal amount of 92 million (Conditional Share Capital I), of up to an aggregate nominal amount of 29 million (Conditional Share Capital III) and up to an aggregate nominal amount of 24.5 million (Conditional Share Capital IV/2006) that may be used to issue up to 72.6 million new registered shares in connection with the Company's long-term incentive plans (see note 27). These shares will have dividend rights from the beginning of the fiscal year in which they are issued.

The Company has conditional capital of up to an aggregate nominal amount of 152 million (Conditional Share Capital 2002) that may be used to issue up to 76 million new registered shares upon conversion of debt securities, issued in June 2003 and which may be converted at any time until May 22, 2010 (see note 22). These shares will have dividend rights from the beginning of the fiscal year in which they are issued.

The Company has further conditional capital of up to an aggregate nominal amount of 248 million (Conditional Share Capital 2007) that may be used to issue up to 124 million new registered shares upon conversion of debt securities which may be issued before February 14, 2012. These shares will have dividend rights from the beginning of the fiscal year in which they are issued.

The Company has further conditional capital of up to an aggregate nominal amount of 150 million (Conditional Share Capital 2008) that may be used to issue up to 75 million new registered shares upon conversion of debt securities which may be issued before February 13, 2013. These shares will have dividend rights from the beginning of the fiscal year in which they are issued.

Dividends

Under the German Stock Corporation Act (*Aktiengesetz*), the amount of dividends available for distribution to shareholders is based on the level of earnings (*Bilanzgewinn*) of the ultimate parent, as determined in accordance with the HGB. All dividends must be approved by shareholders.

The ordinary shareholders meeting held in February 2008 did not authorize a dividend for the 2007 fiscal year. No earnings are available for distribution as a dividend for the 2008 fiscal year, since Infineon Technologies AG on a stand-alone basis as the ultimate parent incurred a cumulative loss (*Bilanzverlust*) as of September 30, 2008.

Subject to market conditions, Infineon intends to retain future earnings for investment in the development and expansion of its business.

27. Share-based Compensation

In 1999, the Company's shareholders approved a long-term incentive plan (LTI 1999 Plan), which provided for the granting of non-transferable options to acquire ordinary shares over a future period. Under the terms of the LTI 1999 Plan, the Company could grant up to 48 million options over a five-year period. The exercise price of each option equals 120 percent of the average closing price of the Company's stock during the five trading days prior to the grant date. Granted options vest at the latter of two years from the grant date or the date on which the Company's stock reaches the exercise price for at least one trading day. Options expire seven years from the grant date.

In 2001, the Company's shareholders approved the International Long-Term Incentive Plan (LTI 2001 Plan) which replaced the LTI 1999 Plan. Options previously issued under the LTI 1999 Plan remain unaffected as to terms and conditions; however, no additional options may be issued under the LTI 1999 Plan. Under the terms of the LTI 2001 Plan, the Company could grant up to 51.5 million options over a five-

F-39

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

year period. The exercise price of each option equals 105 percent of the average closing price of the Company's stock during the five trading days prior to the grant date. Granted options have a vesting period of between two and four years, subject to the Company's stock reaching the exercise price on at least one trading day, and expire seven years from the grant date.

Under the LTI 2001 Plan, the Company's Supervisory Board decided annually within 45 days after publication of the financial results how many options to grant to the Management Board. The Management Board, within the same period, decided how many options to grant to eligible employees.

In 2006, the Company's shareholders approved the Stock Option Plan 2006 (SOP 2006) which replaced the LTI 2001 Plan. Under the terms of SOP 2006, the Company can grant up to 13 million options over a three-year period. The exercise price of each option equals 120 percent of the average closing price of the Company's stock during the five trading days prior to the grant date. Granted options are only exercisable if the price of a share exceeds the trend of the comparative index Philadelphia Semiconductor Index (SOX) for at least three consecutive days on at least one occasion during the life of the option. Granted options have a vesting period of three years, subject to the Company's stock reaching the exercise price on at least one trading day, and expire six years from the grant date.

Under the SOP 2006, the Supervisory Board will decide annually within a period of 45 days after publication of the annual results or the results of the first or second quarters of a fiscal year, but no later than two weeks before the end of the quarter, how many options to grant to the Management Board. During that same period the Management Board may grant options to other eligible employees.

At the discretion of the Company, exercised options of the LTI 2001 Plan and SOP 2006 can be satisfied with shares either by issuing shares from the Conditional Share Capital I and Conditional Share Capital III for the LTI 2001 Plan or from the Conditional Share Capital III and Conditional Share Capital IV/2006 for the SOP 2006 or by transferring shares held by the Company.

A summary of the status of the LTI 1999 Plan, the LTI 2001 Plan, and the SOP 2006 as of September 30, 2008, and changes during the fiscal year then ended are presented below (options in millions, exercise price in euro, intrinsic value in millions of euro):

	Number of options	Weighted- average exercise price	Weighted- average remaining life (in years)	Aggregated Intrinsic Value
Outstanding at September 30, 2007	39.4	16.17	2.99	66
Granted				
Exercised				
Forfeited and expired	(6.2)	37.44		
Outstanding at September 30, 2008	33.2	12.30	2.28	

Vested and expected to vest, net of estimated forfeitures at September 30, 2008	30.6	12.32	2.28
Exercisable at September 30, 2008	26.5	12.89	1.83

Options with an aggregate fair value of 51 million, 32 million and 26 million vested during the fiscal years ended September 30, 2006, 2007 and 2008, respectively. Options with a total intrinsic value of 0, 6 million and 0 were exercised during the fiscal years ended September 30, 2006, 2007 and 2008, respectively.

F-40

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Changes in the Company's unvested options for the fiscal year ended September 30, 2008 are summarized as follows (options in millions, fair values in euro, intrinsic value in millions of euro):

	Number of options	Weighted- average grant date fair value	Weighted- average remaining life (in years)	Aggregated Intrinsic Value
Unvested at September 30, 2007	13.6	3.50	4.77	35
Granted				
Vested	(6.5)	4.04		
Forfeited	(0.4)	3.23		
Unvested at September 30, 2008	6.7	2.96	4.05	
Unvested options expected to vest	4.1	3.30	4.03	

The fair value of each option grant issued pursuant to the 1999 and 2001 Long-Term Incentive Plans was estimated on the grant date using the Black-Scholes option-pricing model. Prior to the adoption of SFAS No. 123 (revised 2004), Infineon relied on historical volatility measures when estimating the fair value of stock options granted to employees. Following the implementation of SFAS No. 123 (revised 2004), Infineon uses a combination of implied volatilities from traded options on Infineon's ordinary shares and historical volatility when estimating the fair value of stock options granted to employees, as it believes that this methodology better reflects the expected future volatility of its stock. The expected life of options granted was estimated based on historical experience.

The fair value of each option grant issued pursuant to the Stock Option Plan 2006 was estimated on the grant date using a Monte Carlo simulation model. This model takes into account vesting conditions relating to the performance of the SOX and its impact on stock option fair value. The Company uses a combination of implied volatilities from traded options on Infineon's ordinary shares and historical volatility when estimating the fair value of stock options granted to employees, as it believes that this methodology better reflects the expected future volatility of its stock. The expected life of options granted was estimated using the Monte Carlo simulation model.

Beginning on the date of adoption of SFAS No. 123 (revised 2004), forfeitures are estimated based on historical experience; prior to the date of adoption, forfeitures were recorded as they occurred. The risk-free rate is based on treasury note yields at the time of grant for the estimated life of the option. Infineon has not made any dividend payments during the fiscal year ended September 30, 2008.

The following weighted-average assumptions were used in the fair value calculation during the fiscal years ended September 30, 2006, and 2007:

2006 2007

Weighted-average assumptions:		
Risk-free interest rate	3.08%	3.91%
Expected volatility, underlying shares	43%	40%
Expected volatility, SOX index		36%
Forfeiture rate, per year		3.40%
Dividend yield	0%	0%
Expected life in years	5.07	3.09
Weighted-average fair value per option at grant date in	3.19	2.03

As of September 30, 2008, there was a total of 4 million in unrecognized compensation expense related to unvested stock options of Infineon, which is expected to be recognized over a weighted-average period of less than one year.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Share-Based Compensation Expense

Share-based compensation expense was allocated as follows for the fiscal years ended September 30, 2006, 2007 and 2008:

	2006	2007	2008
	(in millions)		
Compensation expense recognized:			
Cost of goods sold	6	2	1
Selling, general and administrative expenses	11	6	3
Research and development expenses	8	4	1
Total share-based compensation expense	25	12	5
Share-based compensation effect on basic and diluted loss per share in	(0.03)	(0.02)	(0.01)

Cash received from stock option exercises was 19 million and 0 during the fiscal years ended September 30, 2007 and 2008, respectively. The amount of share-based compensation expense which was capitalized and remained in inventories for the fiscal years ended September 30, 2006, 2007 and 2008 was immaterial. Share-based compensation expense does not reflect any income tax benefits, since stock options are granted in tax jurisdictions where the expense is not deductible for tax purposes.

28. Other Comprehensive Loss

The changes in the components of other comprehensive loss for the years ended September 30, 2006, 2007 and 2008 are as follows:

	2006			2007			2008		
	Pretax	Tax effect	Net	Pretax	Tax effect	Net	Pretax	Tax effect	Net
	(in millions)								
Unrealized (losses) gains on securities:

30. Related Parties

The Company has transactions in the normal course of business with Associated and Related Companies (Related Parties). The Company purchases certain of its raw materials, especially chipsets, from, and sells certain of its products to, Related Parties. Purchases and sales to Related Parties are generally based on market prices or manufacturing cost plus a mark-up.

Transactions between the Company and ALTIS subsequent to the consolidation of ALTIS during the first quarter of the 2006 fiscal year are no longer reflected as Related Party transactions (see notes 16 and 25). Also, on April 3, 2006, Siemens disposed of its remaining shareholding in the Company. Transactions between the Company and Siemens subsequent to this date are no longer reflected as Related Party transactions.

Related Party receivables consist primarily of trade, financial, and other receivables from Associated and Related Companies, and totaled 194 million and 80 million as of September 30, 2007 and 2008, respectively. At September 30, 2007, current financial and other receivables from Associated and Related Companies included a revolving term loan of 52 million due from ALTIS.

Related Party payables consist primarily of trade, financial, and other payables from Associated and Related Companies, and totaled 81 million and 21 million as of September 30, 2007 and 2008, respectively.

Related Party receivables and payables as of September 30, 2007 and 2008 have been segregated first between amounts owed by or to companies in which the Company has an ownership interest, and second based on the underlying nature of the transactions. Trade receivables and payables include amounts for the purchase and sale of products and services. Financial and other receivables and payables represent amounts owed relating to loans and advances and accrue interest at interbank rates.

Sales to Related Parties, consisting primarily of sales to Siemens group companies and Associated and Related Companies, totaled 366 million, 57 million, and 1 million in the 2006, 2007 and 2008 fiscal years, respectively. Included therein were sales to Siemens group companies totaling 316 million in the 2006 fiscal year and 0 in the 2007 and 2008 fiscal years.

Purchases from Related Parties, consisting primarily of purchases from Siemens group companies and Associated and Related Companies, totaled 200 million, 47 million, and 148 million in the 2006, 2007 and 2008 fiscal years, respectively. Included therein were purchases from Siemens group companies totaling 74 million in the 2006 fiscal year and 0 in the 2007 and 2008 fiscal years.

31. Pension Plans

Pension benefits provided by the Company are currently organized primarily through defined benefit pension plans which cover a significant portion of the Company's employees. Plan benefits are principally

F-43

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

based upon years of service. Certain pension plans are based on salary earned in the last year or last five years of employment, while others are fixed plans depending on ranking (both salary level and position). The measurement date for the Company's pension plans is June 30.

In February 2007, the Company transferred the majority of its existing domestic (German) pension plans into a new Infineon pension plan with effect from October 1, 2006. Under the new plan, employee benefits are predominantly based on contributions made by the Company, although defined benefit provisions are retained. The plan qualifies as a defined benefit plan and, accordingly, the change from the previous defined benefit plans is treated as a plan amendment pursuant to SFAS No. 87. In comparison to the existing domestic pension obligation, the additional impact on projected benefit obligation consists of unrecognized prior service cost of approximately 4 million (of which less than 1 million related to Infineon and 4 million related to Qimonda) and is reflected as a separate component of accumulated other comprehensive income (see note 28), and will be amortized as part of net periodic pension cost over the expected years of future service.

As a result of the adoption of SFAS No. 158 as of the end of the fiscal year ended September 30, 2007, the Company recognizes the overfunded or underfunded status of a defined benefit postretirement plan as an asset or liability in its consolidated balance sheets and recognized the change in that funded status in the year in which the changes occur through comprehensive income (Recognition Provision). Actuarial gains and losses and unrecognized prior service costs are to be recognized as a component of other comprehensive income, net of tax.

The following table summarizes the incremental effect as of September 30, 2007 resulting from the initial adoption of SFAS No. 158.

	Before adoption of SFAS No. 158	Adjustments to initially apply SFAS No. 158 (in millions)	After adoption of SFAS No. 158
Prepaid pension costs	56	(56)	
Current deferred income taxes		(1)	(1)
Intangible asset	1	(1)	
Non-current pension asset		4	4
Current pension liability			
Pension liabilities	(42)	6	(36)
Accumulated other comprehensive loss, net of tax	(3)	48	45

Net asset (liability) recognized	32	(42)	53	(40)	55	(43)

F-45

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

The amounts recognized in other comprehensive loss as of September 30, 2008, showing separately the amounts arising during the period and reclassification adjustments of other comprehensive income (loss) as a result of being recognized as components of net periodic benefit cost for the period, are as follows:

	Unrecognized actuarial losses (gains)		Unrecognized prior service cost (benefits)		Accumulated other comprehensive income (loss)	
	Domestic plans	Foreign plans	Domestic plans	Foreign plans	Domestic plans	Foreign plans
	(in millions)					
Balance at beginning of year	40	(7)	12		52	(7)
Additions	(11)	6	(1)		(12)	6
Reclassification adjustment			(1)		(1)	
Balance at end of the year	29	(1)	10		39	(1)

The amounts in accumulated other comprehensive loss that are expected to be recognized as components of the net periodic benefit cost in the 2009 fiscal year are actuarial gains in an amount of less than 1 million and prior service cost in an amount of 1 million.

Information for pension plans with projected benefit obligations and accumulated benefit obligations in excess of plan assets are as follows:

	2006		2007		2008	
	Domestic plans	Foreign plans	Domestic plans	Foreign plans	Domestic plans	Foreign plans
	(in millions)					
Projected benefit obligation	390	61	60		78	
Fair value of plan assets	257	24	24		36	
Accumulated benefit obligation	337	51	44		43	
Fair value of plan assets	257	24	17		16	

The weighted-average assumptions used in calculating the actuarial values for the pension plans are as follows:

	2006		2007		2008	
	Domestic plans	Foreign plans	Domestic plans	Foreign plans	Domestic Plans	Foreign plans
Discount rate	4.8%	5.3%	5.5%	5.6%	6.5%	6.1%

Rate of compensation increase	2.5%	1.8%	2.5%	2.3%	2.5%	2.8%
Projected future pension increases	1.8%	2.2%	1.8%	2.7%	2.0%	2.9%
Expected return on plan assets	6.5%	6.9%	6.1%	6.9%	6.5%	7.0%

Discount rates are established based on prevailing market rates for high-quality fixed-income instruments that, if the pension benefit obligation were settled at the measurement date, would provide the necessary future cash flows to pay the benefit obligation when due. The Company believes short-term changes in interest rates should not affect the measurement of the Company's long-term obligation.

Investment Strategies

The investment approach of the Company's pension plans involves employing a sufficient level of flexibility to capture investment opportunities as they occur, while maintaining reasonable parameters to ensure that prudence and care are exercised in the execution of the investment program. The Company's pension plans' assets are invested with several investment managers. The plans employ a mix of active and passive investment management programs. Considering the duration of the underlying liabilities, a

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

portfolio of investments of plan assets in equity securities, debt securities and other assets is targeted to maximize the long-term return on assets for a given level of risk. Investment risk is monitored on an ongoing basis through periodic portfolio reviews, meetings with investment managers and annual liability measurements. Investment policies and strategies are periodically reviewed to ensure the objectives of the plans are met considering any changes in benefit plan design, market conditions or other material items.

Expected Long-term Rate of Return on Plan Assets

Establishing the expected rate of return on pension assets requires judgment. The Company's approach in determining the long-term rate of return for plan assets is based upon historical financial market relationships that have existed over time, the types of investment classes in which pension plan assets are invested, long-term investment strategies, as well as the expected compounded return the Company can reasonably expect the portfolio to earn over appropriate time periods.

The Company reviews the expected long-term rate of return annually and revises it as appropriate. Also, the Company periodically commissions detailed asset/liability studies to be performed by third-party professional investment advisors and actuaries.

Plan Asset Allocation

As of September 30, 2007 and 2008 the percentage of plan assets invested and the targeted allocation in major asset categories are as follows:

	2007		2008		Targeted Allocation	
	Domestic plans	Foreign plans	Domestic plans	Foreign plans	Domestic plans	Foreign plans
Equity securities	37%	60%	34%	47%	36%	47%
Debt securities	34%	22%	36%	16%	31%	17%
Other	29%	18%	30%	37%	33%	36%
Total	100%	100%	100%	100%	100%	100%

The Company's asset allocation targets for its pension plan assets are based on its assessment of business and financial conditions, demographic and actuarial data, funding characteristics, related risk factors, market sensitivity analysis and other relevant factors. The overall allocation is expected to help protect the plans' funded status while generating sufficiently stable real returns (i.e., net of inflation) to meet current and future benefit payment needs. Due to active portfolio management, the asset allocation may differ from the target allocation up to certain limits for different classes. As a matter of policy, the Company's pension plans do not invest in shares of Infineon.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

The components of net periodic pension cost for the years ended September 30, 2006, 2007 and 2008 are as follows:

	2006		2007		2008	
	Domestic plans	Foreign plans	Domestic Plans	Foreign plans	Domestic plans	Foreign plans
	(in millions)					
Service cost	(18)	(4)	(20)	(4)	(16)	(3)
Interest cost	(15)	(4)	(18)	(4)	(18)	(4)
Expected return on plan assets	11	2	15	3	22	3
Amortization of unrecognized prior service (cost) benefits	(1)	2	(1)		(1)	
Amortization of unrecognized actuarial gains (losses)	(6)		(7)	1		
Curtailment gain recognized		2		1		
Net periodic pension cost (note 7)	(29)	(2)	(31)	(3)	(13)	(4)

The prior service costs relating to the pension plans are amortized in equal amounts over the expected years of future service of each active employee who is expected to receive benefits from the pension plans.

Unrecognized gains or losses are included in the net pension cost for the year, if as of the beginning of the year, the unrecognized net gains or losses exceed 10 percent of the greater of the projected benefit obligation or the market value of the plan assets. The amortization is the excess divided by the average remaining service period of active employees expected to receive benefits under the plan.

Actuarial gains (losses) amounted to (3) million, 78 million and 59 million for the fiscal years ended September 30, 2006, 2007 and 2008, respectively. The increase in actuarial gains in the 2007 and 2008 fiscal year was primarily the result of the increase in the discount rate used to determine the benefit obligation.

It is not planned nor anticipated that any plan assets will be returned to any business entity during the next fiscal year.

The effect of employee terminations in connection with the Company's restructuring plans (see note 8), on the Company's pension obligation is reflected as a curtailment in the years ended September 30, 2006, 2007 and 2008 pursuant to the provisions of SFAS No. 88 *Employers Accounting for Settlements and Curtailments of Defined Benefit Pension Plans and for Termination Benefits*.

The future benefit payments, which reflect future service, as appropriate, that are expected to be paid from the Company's pension plan for the next five fiscal years and thereafter are as follows:

Years ending September 30,	Domestic plans	Foreign plans
----------------------------	----------------	---------------

	(in millions)	
2009	24	2
2010	24	2
2011	25	3
2012	20	2
2013	22	2
Thereafter	139	20

32. Financial Instruments

The Company periodically enters into derivative financial instruments, including foreign currency forward and option contracts as well as interest rate swap agreements. The objective of these transactions

F-48

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

is to reduce the impact of interest rate and exchange rate fluctuations on the Company's foreign currency denominated net future cash flows. The Company does not enter into derivatives for trading or speculative purposes.

The euro equivalent notional amounts in millions and fair values of the Company's derivative instruments as of September 30, 2007 and 2008 are as follows:

	2007		2008	
	Notional amount	Fair value	Notional amount	Fair value
	(in millions)			
Forward contracts sold:				
U.S. dollar	260	14	213	(5)
Japanese yen	15		5	
Singapore dollar			10	
Malaysian ringgit	3		3	
Norwegian krone	2			
Forward contracts purchased:				
U.S. dollar	283	(19)	157	(4)
Japanese yen	4		1	
Singapore dollar	19		29	
Great Britain pound	6		9	
Malaysian ringgit	66	(1)	52	
Norwegian krone	7		2	
Other currencies	1			
Currency Options sold:				
U.S. dollar			177	(5)
Currency Options purchased:				
U.S. dollar			163	1
Interest rate swaps	700	(10)	500	(1)
Other	123	9	77	(1)
Fair value, net		(7)		(15)

The Company enters into derivative instruments, primarily foreign exchange forward contracts, to hedge significant anticipated U.S. dollar cash flows from operations. During the fiscal year ended September 30, 2008, the Company designated as cash flow hedges certain foreign exchange forward contracts and foreign exchange options related to highly probable forecasted sales denominated in U.S. dollars. The Company did not record any ineffectiveness for these hedges for the fiscal year ended September 30, 2008. However, it excluded differences between spot and forward rates and the time value from the assessment of hedge effectiveness and included this component of financial instruments' gain or loss as part of cost of goods sold. It is estimated that 4 million of the net losses recognized directly in other comprehensive income as of September 30, 2008 will be reclassified into earnings during the 2009 fiscal year. All foreign exchange derivatives designated as cash flow hedges held as of September 30, 2008 have maturities of six

months or less. Foreign exchange derivatives entered into by the Company to offset exposure to anticipated cash flows that do not meet the requirements for applying hedge accounting are marked to market at each reporting period with unrealized gains and losses recognized in earnings. For the fiscal year ended September 30, 2007 and 2008, no gains or losses were reclassified from accumulated other comprehensive income as a result of the discontinuance of foreign currency cash flow hedges resulting from a determination that it was probable that the original forecasted transaction would not occur.

For the fiscal years ended September 30, 2006, 2007 and 2008, net gains (losses) related to foreign currency derivatives and foreign currency transactions included in determining net income (loss) amounted to (11) million, 3 million and 15 million, respectively.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

Fair values of financial instruments are determined using quoted market prices or discounted cash flows. The fair value of the Company's unsecured term loans and interest-bearing notes payable approximate their carrying values as their interest rates approximate those which could be obtained currently. At September 30, 2008, the subordinated convertible and exchangeable notes, both due 2010, were trading at a 12.07 percent and a 12.34 percent discount to par, respectively, based on quoted market values. The fair values of the Company's cash and cash equivalents, receivables and payables, as well as related-party receivables and payables and other financial instruments approximated their carrying values due to their short-term nature. Marketable securities are recorded at fair value (see note 11).

33. Risks

The financial risks of the Company consist mainly of risks related to raise enough capital, interest rate risks, liquidity risks and currency exchange risks. Financial instruments that expose the Company to credit risk consist primarily of trade receivables, cash equivalents, marketable securities and financial derivatives.

Concentrations of credit risks with respect to trade receivables are limited by the large number of geographically diverse customers that make up the Company's customer base. The Company controls credit risk through credit approvals, credit limits and monitoring procedures, as well as comprehensive credit evaluations for all customers.

The credit risk with respect to cash equivalents, marketable securities and financial derivatives is limited by transactions with a number of large international financial institutions, with pre-established limits. The Company does not believe that there is significant risk of non-performance by these counterparties because the Company monitors their credit risk and limits the financial exposure and the amounts of agreements entered into with any one financial institution.

The Company's currency exchange risk is mainly caused by the U.S. Dollar and the Japanese Yen. Generally the Company's policy with respect to limiting short-term foreign currency exposure is to economically hedge at least 75 percent of its estimated net exposure for the initial two-month period, at least 50 percent of its estimated net exposure for the third month and, depending on the nature of the underlying transactions, a significant portion thereafter. An unfavorable development of the Euro to U.S. dollar rate could negatively affect the operative results of the Company.

In order to remain competitive, the Company must continue to make substantial investments in process technology and research and development. Portions of these investments might not be recoverable if these research and development efforts fail to gain market acceptance or if markets significantly deteriorate.

Due to the high-technology nature of the Company's operations, intellectual property is an integral part of the Company's business. The Company has intellectual property which it has self-developed, purchased or licensed from third parties. The Company is exposed to infringements by others of such intellectual property rights. Conversely, the Company is exposed to assertions by others of infringement by the Company of their intellectual property rights.

Additionally, the Company faces risks in connection with claims relating to alleged defective or faulty products, claims relating to the alleged transgression of environmental rules or regulations and other general liability claims. Regardless of the outcome of these claims, the Company may incur substantial costs in defending itself against these claims. Infineon intends to exert substantial efforts in defending itself vigorously against such claims including the

support of internal and external experts. For more details about current legal issues see note 34.

F-50

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

The quick pace of technological change coupled with the possibility of delays in the introduction of new products in the market could lead to a significant curtailment of our business which could in turn lead to a loss of customer relationships.

High price pressure and associated risks continue to affect the Company's business. As a substantial volume of the Company's products may be purchased by a select number of customers, operational results may also be dependent upon their success in the marketplace. The Company reacts to such developments by constantly seeking to widen its customer base.

The Company, through its use of third-party foundry and joint venture arrangements, uses a significant portion of manufacturing capacity that is outside of its direct control. As a result, the Company is reliant upon such other parties for the timely and uninterrupted supply of products and is to a certain degree exposed to risks relating to price variations.

See also note 4 for additional risks related to Qimonda.

34. Commitments and Contingencies

Litigation and Investigations

In September 2004, the Company entered into a plea agreement with the Antitrust Division of the U.S. Department of Justice (DOJ) in connection with its investigation into alleged antitrust violations in the DRAM industry. Pursuant to this plea agreement, the Company agreed to plead guilty to a single count of conspiring with other unspecified DRAM manufacturers to fix the prices of DRAM products between July 1, 1999 and June 15, 2002, and to pay a fine of \$160 million. The fine plus accrued interest is being paid in equal annual installments through 2009. The Company has a continuing obligation to cooperate with the DOJ in its ongoing investigation of other participants in the DRAM industry. The price-fixing charges related to DRAM sales to six Original Equipment Manufacturer (OEM) customers that manufacture computers and servers. The Company has entered into settlement agreements with five of these OEM customers and is considering the possibility of a settlement with the remaining OEM customer, which purchased only a very small volume of DRAM products from the Company. The Company has secured individual settlements with eight direct customers in addition to those OEM customers.

Subsequent to the commencement of the DOJ investigation, a number of putative class action lawsuits were filed against the Company, its U.S. subsidiary Infineon Technologies North America Corporation (IF North America) and other DRAM suppliers, alleging price-fixing in violation of the Sherman Act and seeking treble damages in unspecified amounts, costs, attorneys' fees, and an injunction against the allegedly unlawful conduct. In September 2002, the Judicial Panel on Multi-District Litigation ordered that these federal cases be transferred to the U.S. District Court for the Northern District of California for coordinated or consolidated pre-trial proceedings as part of a Multi District Litigation (MDL). In September 2005, the Company and IF North America entered into a definitive settlement agreement with counsel for the class of direct U.S. purchasers of DRAM (granting an opportunity for individual class members to opt out of the settlement). In November 2006, the court approved the settlement agreement and entered final judgment and dismissed the claims with prejudice.

In April 2006, Unisys Corporation (Unisys) filed a complaint against the Company and IF North America, among other DRAM suppliers, alleging state and federal claims for price-fixing and seeking recovery as both a direct and indirect purchaser of DRAM. The complaint was filed in the Northern District of California and has been related to the MDL proceeding described above. In October 2007, the court denied a motion of the Company, IF North America, and the other defendants to dismiss the Unisys complaint.

Table of Contents

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

In February and March 2007, four more cases were filed by All American Semiconductor, Inc., Edge Electronics, Inc., Jaco Electronics, Inc., and DRAM Claims Liquidation Trust, by its Trustee, Wells Fargo Bank, N.A. The All American Semiconductor complaint alleges claims for price-fixing under the Sherman Act. The Edge Electronics, Jaco Electronics and DRAM Claims Liquidation Trust complaints allege state and federal claims for price-fixing. All four cases were filed in the Northern District of California and have been related to the MDL described above. All defendants have filed joint motions for summary judgment and to exclude plaintiffs' principal expert in all of these cases, which have been scheduled for hearing on December 17, 2008.

Sixty-four additional cases were filed through October 2005 in numerous federal and state courts throughout the United States. Each of these state and federal cases (except for one relating to foreign purchasers, described below) purports to be on behalf of a class of individuals and entities who indirectly purchased DRAM in the United States during specified time periods commencing in or after 1999 (the Indirect U.S. Purchaser Class). The complaints variously allege violations of the Sherman Act, California's Cartwright Act, various other state laws, unfair competition law, and unjust enrichment and seek treble damages in generally unspecified amounts, restitution, costs, attorneys' fees and injunctions against the allegedly unlawful conduct.

The foreign purchasers case referred to above was dismissed with prejudice and without leave to amend in March 2006; the plaintiffs have appealed to the Ninth Circuit Court of Appeals. On August 14, 2008, the Ninth Circuit issued its decision affirming the dismissal of this action. 23 of the state and federal court cases were subsequently ordered transferred to the U.S. District Court for the Northern District of California for coordinated and consolidated pretrial proceedings as part of the MDL proceeding described above. 19 of the 23 transferred cases are currently pending in the MDL litigation. The pending California state cases were coordinated and transferred to San Francisco County Superior Court for pre-trial proceedings. The plaintiffs in the indirect purchaser cases outside California agreed to stay proceedings in those cases in favor of proceedings on the indirect purchaser cases pending as part of the MDL pre-trial proceedings.

On January 29, 2008, the district court in the MDL proceedings entered an order granting in part and denying in part the defendants' motion for judgment on the pleadings directed at several of the claims. Plaintiffs filed a Third Amended Complaint on February 27, 2008. On March 28, 2008, the court granted plaintiffs leave to immediately appeal its decision to the Court of Appeals for the Ninth Circuit. On June 26, 2008, the Ninth Circuit Court of Appeals issued an order agreeing to hear the appeal and the parties submitted a stipulation and proposed order to that effect. The district court stayed proceedings pending the Court of Appeals' decision whether to accept the appeal and scheduled a hearing for October 30, 2008 to decide whether the stay should remain in place until the appeal is decided.

In July 2006, the New York state attorney general filed an action in the U.S. District Court for the Southern District of New York against the Company, IF North America and several other DRAM manufacturers on behalf of New York governmental entities and New York consumers who purchased products containing DRAM beginning in 1998. The plaintiffs allege violations of state and federal antitrust laws arising out of the same allegations of DRAM price-fixing and artificial price inflation practices discussed above, and seek recovery of actual and treble damages in unspecified amounts, penalties, costs (including attorneys' fees) and injunctive and other equitable relief. In October 2006, this action was made part of the MDL proceeding described above. In July 2006, the attorney generals of Alaska, Arizona, Arkansas, California, Colorado, Delaware, Florida, Hawaii, Idaho, Illinois, Iowa, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Nebraska, Nevada, New Mexico, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia and

Wisconsin filed a lawsuit in the U.S. District Court for the Northern District of California against the Company, Infineon North America and several other DRAM manufacturers on behalf of governmental entities, consumers and businesses in each of those states who purchased products containing DRAM

Notes to the Consolidated Financial Statements

beginning in 1998. In September 2006, the complaint was amended to add claims by the attorneys general of Kentucky, Maine, New Hampshire, North Carolina, the Northern Mariana Islands and Rhode Island. This action is based on state and federal law claims relating to the same alleged anticompetitive practices in the sale of DRAM and plaintiffs seek recovery of actual and treble damages in unspecified amounts, penalties, costs (including attorneys fees) and injunctive and other relief. In October 2006, the Company joined the other defendants in filing motions to dismiss several of the claims alleged in these two actions. In August 2007, the court entered orders granting the motions in part and denying the motions in part. Amended complaints in both actions were filed on October 1, 2007. On April 15, 2008, the court issued two orders in the New York and multistate attorneys general cases on the defendants' motions to dismiss. The order in the New York action denied the defendants' motion to dismiss. The order in the multistate attorney generals case partly dismissed and partly granted the motion. On May 13, 2008, the Company answered the complaint by the State of New York and the multistate complaint. On September 15, 2008, the Company filed an amended answer to the multistate complaint. Between June 25, 2007 and April 28, 2008, the state attorneys general of six states, Alaska, Delaware, Ohio, New Hampshire, Texas and Vermont, filed requests for dismissal of their claims. Plaintiffs California and New Mexico filed a joint motion for class certification seeking to certify classes of all public entities within both states. On September 5, 2008, the Court entered an order denying both states' motions for class certification. On September 15, 2008, the New York State Attorney General filed a motion for judgment on the pleadings regarding certain defendants' affirmative defenses to New York's amended complaint. A hearing for the motion was scheduled for December 17, 2008.

In April 2003, the Company received a request for information from the European Commission (the Commission) to enable the Commission to assess the compatibility with the Commission's rules on competition of certain practices of which the Commission has become aware in the European market for DRAM products. In light of its plea agreement with the DOJ, the Company made an accrual during the 2004 fiscal year for an amount representing the probable minimum fine that may be imposed as a result of the Commission's investigation. Any fine actually imposed by the Commission may be significantly higher than the reserve established, although the Company cannot more accurately estimate the amount of the actual fine. The Company is fully cooperating with the Commission in its investigation.

In May 2004, the Canadian Competition Bureau advised IF North America that it, its affiliates and present and past directors, officers and employees are among the targets of a formal inquiry into an alleged conspiracy to prevent or lessen competition unduly in the production, manufacture, sale or supply of DRAM, contrary to the Canadian Competition Act. No formal steps (such as subpoenas) have been taken by the Competition Bureau to date. The Company is fully cooperating with the Competition Bureau in its inquiry.

Between December 2004 and February 2005, two putative class proceedings were filed in the Canadian province of Quebec, and one was filed in each of Ontario and British Columbia against the Company, IF North America and other DRAM manufacturers on behalf of all direct and indirect purchasers resident in Canada who purchased DRAM or products containing DRAM between July 1999 and June 2002, seeking damages, investigation and administration costs, as well as interest and legal costs. Plaintiffs primarily allege conspiracy to unduly restrain competition and to illegally fix the price of DRAM.

Between September and November 2004, seven securities class action complaints were filed against the Company and current or former officers in U.S. federal district courts, later consolidated in the Northern District of California, on behalf of a putative class of purchasers of the Company's publicly-traded securities who purchased them during the period from March 2000 to July 2004 (the Securities Class Actions). The consolidated amended complaint alleges violations of the U.S. securities laws and asserts that the defendants made materially false and misleading public

statements about the Company's historical and projected financial results and competitive position because they did not disclose the Company's alleged participation in DRAM price-fixing activities and that, by fixing the price of DRAM,

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

defendants manipulated the price of the Company's securities, thereby injuring its shareholders. The plaintiffs seek unspecified compensatory damages, interest, costs and attorneys' fees. In September 2006, the court dismissed the complaint with leave to amend. In October 2006, the plaintiffs filed a second amended complaint. In March 2007, pursuant to a stipulation agreed with the defendants, the plaintiffs withdrew the second amended complaint and were granted a motion for leave to file a third amended complaint. Plaintiffs filed a third amended complaint in July 2007. A hearing was held on November 19, 2007. On January 25, 2008, the court entered into an order granting in part and denying in part the defendants' motions to dismiss the Securities Class Action complaint. The court denied the motion to dismiss with respect to plaintiffs' claims under §§ 10(b) and 20(a) of the U.S. Securities Exchange Act of 1934 and dismissed the claim under § 20A of the act with prejudice. On August 13, 2008 the court denied a motion of the Company for summary judgment based on the statute of limitations. On August 25, 2008, the Company filed a motion for judgment on the pleadings against foreign purchasers, i.e., proposed class members who are neither residents nor citizens of the United States who bought securities of the Company on an exchange outside the United States. On August 25, 2008, the plaintiffs also filed a motion to certify the class. A hearing on both motions is scheduled for December 15, 2008.

The Company's directors and officers' insurance carriers have denied coverage in the Securities Class Actions and the Company filed suit against the carriers in December 2005 and August 2006. The Company's claims against one D&O insurance carrier were finally dismissed in May 2007. The claim against the other insurance carrier is still pending.

In April 2007, Lin Packaging Technologies, Ltd. (Lin) filed a lawsuit against the Company, IF North America and an additional DRAM manufacturer in the U.S. District Court for the Eastern District of Texas, alleging that certain DRAM products infringe two Lin patents. In November 2007, the parties settled and the case was dismissed.

On October 31, 2007, Wi-LAN Inc. filed suit in the U.S. District Court for the Eastern District of Texas against Westell Technologies, Inc. and 16 other defendants, including the Company and IF North America. The complaint alleges infringement of three U.S. patents by certain wireless products compliant with the IEEE 802.11 standards and certain ADSL products compliant with the ITU G.992 standards, in each case supplied by certain of the defendants. On January 25, 2008, the Company and IF North America filed an answer and counterclaim. Wi-LAN's answer to the counterclaim was filed on March 20, 2008. On April 1, 2008, the Court granted the Company's and other non-US defendant's stipulated motion to dismiss without prejudice with respect to such non-US defendants. On July 29, 2008 the court determined the trial date and the date for the Markman-Hearing on the construction of essential terms of the asserted patents. The trial date is January 4, 2011; the Markman-Hearing is scheduled for September 1, 2010.

In October 2007, CIF Licensing LLC, New Jersey, USA (CIF), a member of the General Electric Group, filed suit in the Civil Court of Düsseldorf, Germany against Deutsche Telekom AG (DTAG) alleging infringement of four European patents in Germany by certain CPE-modems and ADSL-systems (the CIF Suit). DTAG has given third-party notice to its suppliers which include customers of Infineon to the effect that a declaratory judgment of patent infringement would be legally binding on the suppliers. Since January 2008, various suppliers also gave their suppliers including Infineon third-party notice. On January 28, 2008, Infineon became a party in the suit on the side of DTAG. CIF then filed suit against Infineon alleging indirect infringement of one of the four European patents. DTAG, most of its suppliers and most of their suppliers have formed a joint defense group. Infineon is contractually obliged to indemnify and/or to pay damages to its customers upon different conditions and to different extents, depending on the terms of the specific contracts. By July 16, 2008, DTAG and all the parties who joined the CIF suit in Düsseldorf had filed their answer to the complaint. At the same time, DTAG, Ericsson AB, Texas Instruments Inc., Nokia Siemens Networks and the Company partly jointly and partly separately filed actions of invalidity before the

Federal Patent Court in Munich with respect to all four patents. Concerning the lawsuit in Düsseldorf, CIF must reply by March 9, 2009 and DTAG and the parties who joined the

F-54

Infineon Technologies AG and Subsidiaries
Notes to the Consolidated Financial Statements

lawsuit on the side of DTAG must respond by September 28, 2009. A court hearing is scheduled for November and December 2009.

On April 12, 2008, Third Dimension Semiconductor Inc. filed suit in the U.S. District Court for the Eastern District of Texas against the Company and IF North America. The complaint alleges infringement of 3 U.S. patents by certain products, including power semiconductor devices sold under the name CoolMOS. On May 20, 2008, Third Dimension Semiconductor Inc. filed an amended complaint adding one more U.S. patent to the lawsuit. On September 19, 2008, the Company and IF North America filed an answer and counterclaim.

On April 18, 2008, LSI filed a complaint with the U.S. International Trade Commission to investigate an alleged infringement by 18 parties of one LSI patent (the ITC Case). On June 6, 2008, LSI filed a motion to amend such complaint to add Qimonda and four other respondents to the investigation. In addition, LSI filed a lawsuit in the Eastern District of Texas on the same patent against all respondents in the ITC Case, including Qimonda (see note 36).

Accruals and the Potential Effect of these Lawsuits

Liabilities related to legal proceedings are recorded when it is probable that a liability has been incurred and the associated amount can be reasonably estimated. Where the estimated amount of loss is within a range of amounts and no amount within the range is a better estimate than any other amount, the minimum amount is accrued. As of September 30, 2008, Infineon Logic had accrued liabilities in the amount of 37 million related to the DOJ and European antitrust investigations and the direct and indirect purchaser litigation and settlements described above, as well as for legal expenses for the DOJ related and securities class action complaints. In addition, as of September 30, 2008, Qimonda had accrued 36 million in connection with these matters. Under the contribution agreement in connection with the carve-out of the Qimonda business, Qimonda is required to indemnify the Company, in whole or in part, for any claim (including any related expenses) arising in connection with the liabilities, contracts, offers, uncompleted transactions, continuing obligations, risks, encumbrances and other liabilities the Company incurs in connection with the antitrust actions and the Securities Class Action described above.

As additional information becomes available, the potential liability related to these matters will be reassessed and the estimates revised, if necessary. These accrued liabilities would be subject to change in the future based on new developments in each matter, or changes in circumstances, which could have a material adverse effect on the Company's financial condition and results of operations.

An adverse final resolution of the investigations or lawsuits described above could result in significant financial liability to, and other adverse effects on, the Company, which would have a material adverse effect on its results of operations, financial condition and cash flows. In each of these matters, the Company is continuously evaluating the merits of the respective claims and defending itself vigorously or seeking to arrive at alternative resolutions in the best interest of the Company, as it deems appropriate. Irrespective of the validity or the successful assertion of the claims described above, the Company could incur significant costs with respect to defending against or settling such claims, which could have a material adverse effect on its results of operations, financial condition and cash flows.

The Company is subject to various other lawsuits, legal actions, claims and proceedings related to products, patents, environmental matters, and other matters incidental to its businesses. The Company has accrued a liability for the estimated costs of adjudication of various asserted and unasserted claims existing as of the balance sheet date. Based upon information presently known to management, the Company does not believe that the ultimate resolution of such

other pending matters will have a material adverse effect on the Company's financial position, although the final resolution of such matters could have a material adverse effect on the Company's results of operations or cash flows in the period of settlement.

Contractual Commitments

The following table summarizes the Company's commitments with respect to external parties as of September 30, 2008⁽¹⁾:

	Total	Less than 1 year	Payments Due by Period				
			1-2 years	2-3 years	3-4 years	4-5 years	After 5 years
(in millions)							
Contractual commitments:							
Operating lease payments	776	75	63	59	58	56	465
Unconditional purchase commitments	634	594	18	11	3	4	4
Total Commitments	1,410	669	81	70	61	60	469

⁽¹⁾ Certain payments of obligations or expirations of commitments that are based on the achievement of milestones or other events that are not date-certain are included for purposes of this table based on estimates of the reasonably likely timing of payments or expirations in the particular case. Actual outcomes could differ from those estimates.

The Company has capacity reservation agreements with certain Associated Companies and external foundry suppliers for the manufacturing and testing of semiconductor products. These agreements generally are greater than one year in duration and are renewable. Under the terms of these agreements, the Company has agreed to purchase a portion of their production output based, in part, on market prices.

Purchases under these agreements are recorded as incurred in the normal course of business. The Company assesses its anticipated purchase requirements on a regular basis to meet customer demand for its products. An assessment of losses under these agreements is made on a regular basis in the event that either budgeted purchase quantities fall below the specified quantities or market prices for these products fall below the specified prices.

Other Contingencies

The following table summarizes the Company's contingencies with respect to external parties, other than those related to litigation, as of September 30, 2008⁽¹⁾:

Total	Less than 1 year	Expirations by Period				
		1-2 years	2-3 years	3-4 years	4-5 years	After 5 years

(in millions)

Maximum potential future payments:							
Guarantees ⁽²⁾	97	11		5	14	3	64
Contingent government grants ⁽³⁾	47	20	12	4	5	6	
Total contingencies	144	31	12	9	19	9	64

- (1) Certain expirations of contingencies that are based on the achievement of milestones or other events that are not date-certain are included for purposes of this table based on estimates of the reasonably likely timing of expirations in the particular case. Actual outcomes could differ from those estimates.
- (2) Guarantees are mainly issued for the payment of import duties, rentals of buildings, and contingent obligations related to government grants received.
- (3) Contingent government grants refer to amounts previously received, related to the construction and financing of certain production facilities, which are not otherwise guaranteed and could be refundable if the total project requirements are not met.

On a group-wide basis the Company has guarantees outstanding to external parties of 199 million as of September 30, 2008 (of which 97 million are guarantees of Infineon Logic and 102 million are guarantees of Qimonda). In addition, the Company, as parent company, has in certain customary
