Item 5. Other Events and Regulation FD Disclosure

On April 18, 2001, Occidental Petroleum Corporation announced record earnings before special items for the first quarter 2001 of \$510 million (\$1.38 per share), an increase of more than 90 percent, compared with \$264 million (\$0.72 per share) for the first quarter 2000.

Net income for the first quarter 2001 was \$484 million (\$1.31 per share), compared with \$271 million (\$0.74 per share) for the first quarter 2000. The first quarter 2001 results included special items that are discussed below. Sales increased to \$4.5 billion for the first quarter 2001, an increase of over 70 percent, compared with \$2.6 billion for the first quarter 2000.

In announcing the results, Dr. Ray R. Irani, chairman and chief executive officer, said, "This year's first quarter results represent the highest quarterly earnings before special items in the history of the company. The increase in oil and gas production of more than 35 percent, from 352,000 barrels of oil equivalent in the first quarter of 2000 to 478,000 barrels in the first

Edgar Filing: OCCIDENTAL PETROLEUM CORP /DE/ - Form 8-K

quarter this year, was the key factor in our outstanding first quarter performance. In addition, premium pricing for natural gas sales from our Elk Hills operation in California was another important contributor to our results. Premium pricing for California gas compared to gas production from the Gulf of Mexico should not be viewed as a temporary phenomenon because California's current supply -- demand imbalance that is driving in-state prices is expected to continue for the next two to three years. Partially offsetting the positive factors in the first quarter were the reduced chemical results due to a decline in product demand and higher energy and feedstock costs."

Oil and Gas

The oil and gas segment earned \$946 million for the first quarter 2001, compared with \$394 million for the same period of 2000. The improvement is primarily the result of higher domestic natural gas prices and higher domestic oil production volumes, partially offset by lower worldwide crude oil price realizations and higher exploration expense. The California gas market price premium, which began to increase in the fall of 2000 and continued through the first quarter 2001, resulted in a significantly higher realized price for domestic natural gas. Oil production was also higher in the first quarter this year compared to last year due primarily to the Altura and THUMS acquisitions which occurred in the second quarter 2000.

Chemicals

The chemicals segment reported a net loss before special items of \$53 million for the first quarter 2001, compared with income of \$143 million for the first quarter 2000. The decline in results before special items reflects higher energy and feedstock costs; lower sales prices and volumes for PVC, VCM, EDC and chlorine; and lower results from equity investments.

Chemical results after special items were a loss of \$79 million for the first quarter 2001. The 2001 first quarter included \$26 million pre-tax expense for employee severance, plant write-down costs and plant shut-down costs.

1

Other

Special items reduced earnings by \$26 million after tax, or 7 cents per share. The special items included charges for severance and plant write-downs in the chemicals segment totaling \$26 million and an increase in environmental reserves. These two items were largely offset by the settlement of a long-standing tax issue and an insurance dividend. An additional after-tax charge of \$24 million for a change in accounting standards for derivatives also was recorded.

Forward-looking statements and estimates regarding exploration and production activities, oil, gas and commodity chemical prices and their related earnings effects, and cost reductions in this release are based on assumptions concerning market, competitive, regulatory, environmental, operational and other conditions. Actual results could differ materially as a result of factors discussed in Occidental's Annual Report on Form 10-K.

2

See footnotes on following page.

3

- (a) The first quarter 2001 includes \$33 million interest income on notes receivable from Occidental Permian partners.
- (b) Includes an offset for credits in lieu of U.S. federal income taxes allocated to the divisions. Divisional earnings have benefited from credits allocated by \$1 million and \$4 million at oil and gas and chemical, respectively, in the first quarters of 2001 and 2000.
- (c) The first quarter 2001 includes \$34 million for preferred distributions to the Occidental Permian partners. This is essentially offset by the interest income discussed in (a) above.
- (d) During the first quarter 2001, Occidental placed into an escrow account, with a third party, sufficient funds to retire the outstanding \$20.5 million Calcasieu pollution control revenue bonds due 2005. As a result of the defeasance, Occidental recognized an after-tax loss of \$3 million.
- (e) Effective January 1, 2001, Occidental implemented SFAS No. 133 - "Accounting for Derivative Instruments and Hedging," as amended by SFAS No. 137 - "Accounting for Derivative Instruments and Hedging Activities-Deferral of the Effective Date of FASB Statement No. 133," and SFAS No. 138 - "Accounting for Certain Derivative Instruments and Certain Hedging Activities." Adoption of these new accounting standards resulted in a cumulative after-tax reduction in net income of \$24 million and other comprehensive income of approximately \$27 million.

Text of Speech by Stephen I. Chazen, Chief Financial Officer and

Executive Vice President - Corporate Development

Occidental Petroleum Corporation

STEPHEN CHAZEN
Chief Financial Officer and
Executive Vice President - Corporate Development

- Conference Call -
First Quarter 2001 Earnings Announcement

April 18, 2001
Los Angeles, California

Good morning, and thanks for joining us.

Most, if not all, of you have already received a copy of the press release announcing our first quarter earnings along with the Investor Relations Supplemental Schedules. If you haven't received them, you can find them on our website, oxy.com, or on the SEC's EDGAR site.

Edgar Filing: OCCIDENTAL PETROLEUM CORP /DE/ - Form 8-K

Reported income for our first quarter this year was \$484 million, or \$1.31 per share, compared to last year's first quarter of \$271 million, or \$0.74 per share.

Income before special items was \$510 million, or \$1.38 per share. That represents a 93-percent increase above the \$264 million, or \$0.72 per share, we earned in the first quarter of 2000. The change was due to the following factors:

- o Production increased from 352,000 barrels of oil equivalent per day to 478,000 barrels - for an increase of 36-percent.
- o Our average domestic natural gas price realizations were more than four times higher at \$10.01 per thousand cubic feet compared to \$2.42 in the same quarter last year. Oil price realizations increased slightly from \$23.90 per barrel to \$24.32 per barrel.
- o Exploration expense was \$21 million compared to \$6 million in last year's first quarter and \$30 million in the fourth quarter. Our spending rate is below trend, but in the current quarter we expect to complete the drilling of a number of wells, including two major wells, for a total estimated investment of \$70 million.
- o Chemical earnings before special items were a negative \$53 million compared to a positive \$143 million in last year's first quarter. This year's first quarter results were essentially flat compared with the fourth quarter last year.
- o Special items reduced earnings by \$26 million after-tax, or 7 cents per share. The special items included charges for severance and plant write-downs in the chemicals segment totaling \$26 million and an increase in environmental reserves. These two items were

6

largely offset by the settlement of a long-standing tax issue and an insurance dividend. An additional after-tax charge of \$24 million for a change in accounting standards for derivatives also was recorded.

Oil and gas divisional earnings before special items were \$946 million for the quarter. This is an increase of \$552 million over the same quarter last year and \$183 million over the fourth quarter.

Oil and gas earnings were positively impacted by about \$200 million in premiums we received for our California gas production above NYMEX prices. Most of our California gas sales are based on the Southern California border price at the end of the prior month, with smaller amounts being sold into Northern California markets and spot markets.

Currently, the price of gas sold into Northern California is materially less than the price of gas being sold into Southern California. From Elk Hills, we can ship into either market, but due to pipeline constraints in Southern California we do sell some gas into the Northern California market. The sales price in all of these markets requires some reduction to pay for transportation. The border price is very volatile and daily pricing swings of \$2-3 per million BTUs are not uncommon.

The first quarter included the months of December, January and February that are the heart of the natural gas season. The second quarter includes March, April and May - which historically are the worst months for gas prices. For the

Edgar Filing: OCCIDENTAL PETROLEUM CORP /DE/ - Form 8-K

seven months since last October, when gas shortages began in California, we've received an average of about \$5 above NYMEX prices for our California gas production. Alternatively, compared to the Southern California daily border spot gas price, we've received about \$3 per million BTUs less than the average. We expect our California gas production to continue to average about 300 million cubic feet per day in the second quarter. Because of the tightness of the California gas market we can and do sell our production only to credit worthy buyers.

A \$1.00 per million BTUs swing in gas prices has a \$60 million impact on our quarterly oil and gas earnings. Likewise, a \$1.00 per barrel change in oil prices will impact those quarterly earnings by \$28 million.

With the slowdown in the economy, the chemical sector experienced a sequential worsening of market conditions beginning last July and continuing through January, which was the worst month in the history of this business. This was followed by sequential improvements in February and March, due mainly to lower natural gas prices. Meaningful improvement in the profitability of our chemical business will depend largely on an improved economy.

In the meantime, we're continuing to work on lowering our overhead and other costs. As I noted earlier, we have taken a severance charge at chemicals in the quarter as part of our ongoing effort to cut costs.

During the first quarter we increased shareholder equity by \$368 million and we reduced total debt by \$233 million to \$6.1 billion compared to just under \$6.4 billion at the end of the year. We expect to pay down a similar amount of debt this quarter. Total debt includes preferred securities, the Altura non-recourse debt, Oxy's corporate debt and other obligations. At

7

the end of the quarter our debt to total capitalization ratio was down to 54-percent, compared to 57-percent at year-end.

Capital spending of \$238 million for the quarter was below the estimated run rate of the \$1.1 billion we've budgeted for the year.

Overall, we expect lower debt levels and lower interest rates to result in a further reduction in interest expense in the second quarter.

Now I'd like to turn the conference call over to Dr. Ray Irani, Chairman and CEO.

Text of Speech by Dr. Ray R. Irani, Chairman and Chief Executive Officer

Occidental Petroleum Corporation

DR. RAY R. IRANI
Chairman and Chief Executive Officer

- Conference Call -
First Quarter 2001 Earnings Announcement

April 18, 2001
Los Angeles, California

Thank you, Steve.

Edgar Filing: OCCIDENTAL PETROLEUM CORP /DE/ - Form 8-K

The results Steve just reviewed with you include the highest quarterly earnings in the history of the company. As Steve noted, natural gas sales from our California operations were one of the key factors that helped drive our performance. The price strength for our California gas should not be viewed as a temporary phenomenon that is limited to the first quarter - or even to this year.

Our Elk Hills operation currently accounts for about a third of California's domestic gas production. Because of the structural imbalance in the supply - demand equation for natural gas in the California market, California gas production is receiving premium prices. The size of the premium will fluctuate, but we expect California gas production will continue to sell at a premium until supply and demand come back into balance. Most experts do not see that happening for at least two to three years.

From the beginning, one of the attractions of Elk Hills for us was the earnings potential of Elk Hills' existing gas reserves and the prospects for major deep gas discoveries in the area surrounding Elk Hills. At the same time we've been producing the Elk Hills gas cap, we've assembled the largest holdings of mineral interests in California - approximately 850,000 acres. These properties are concentrated around Elk Hills and extend northward in the San Joaquin Valley to the Lost Hills area where we've been carefully evaluating the technical merits of a number of deep gas plays. We expect to drill a series of test wells over the next several years, with the first deep well scheduled to begin drilling in mid-summer.

8

In the meantime, we've made several key process and operating changes to maintain Elk Hills gas production at historic highs through the first quarter. We expect to maintain production at or near the current level for most of 2001. With success in our exploration program in California we hope to offset the eventual decline.

As a result of the sharp run-up in California natural gas prices, the average returns for Elk Hills have gone from good to superior.

In the 38 months that we've owned our 78-percent interest in Elk Hills, this oil and gas property has generated \$1.75 billion in free cash flow. That equates to a 16-percent return on capital. Clearly, Elk Hills has been an excellent acquisition for us.

Now let's shift the spotlight briefly to the Permian Basin where we're implementing several programs aimed at adding additional reserves to our production stream. Production averaged about 159,000 barrels per day, which is right on target.

We are moving forward with plans for carbon dioxide (CO2) injection in the Cogdell field located in the eastern portion of the Permian Basin. The project will extend the life of the field significantly and produce approximately 10 million barrels of oil that would otherwise be unrecoverable. This project is the first of several planned phases of CO2 flood development for the Cogdell field. When fully implemented, Cogdell production will increase by approximately seven thousand barrels per day. Construction activities for Phase 1 began in March and CO2 injection startup is planned for the third quarter this year.

We also have begun drilling our first gas exploration wells in the Permian Basin. When we purchased Altura last year, we identified a number of gas exploration opportunities that we believed the previous owners had overlooked because their focus was on oil. Now we're in the process of testing some of these exploration concepts.

Edgar Filing: OCCIDENTAL PETROLEUM CORP /DE/ - Form 8-K

In Latin America, our Colombian operations have been in the news, particularly during the last couple of days because of a kidnapping incident involving contractors working at our Cano Limon facility. We're concerned about the fate of the kidnap victims, and we look forward to their safe and speedy return to their families.

For the purpose of this report, let me put our Colombian operations into the financial perspective. Colombia represents less than one-percent of our total corporate assets - so our financial risk is not material. Recent events have had no impact on the drilling of the Gibraltar exploration well in Colombia that is proceeding according to plan. We're currently below the 10,000 foot mark on our way to a total depth of approximately 14,000 feet. We expect to complete this well around mid-year.

In Ecuador, plans for the OCP pipeline are proceeding on schedule. The completion of this pipeline will unlock the development of 112 million barrels of oil reserves we discovered in the Eden-Yuturi field in our Block 15.

In the Middle East, we've submitted proposals for two large gas projects in Saudi Arabia - and we hope to be included in one of them. We hope to hear from the Saudis in a matter of weeks.

9

Apart from Saudi Arabia, we're continuing to pursue new projects in Kuwait and the United Arab Emirates that we expect will be made available to foreign investors in the future. We're also moving ahead with plans to return to Libya once sanctions are lifted.

Thank you - and we're now ready to answer questions.

Portions of this presentation are forward-looking and involve risks and uncertainties that could significantly affect expected results. Factors that could cause results to differ materially include, but are not limited to: global commodity pricing fluctuations for oil, natural gas and chemicals; competitive pricing pressures; higher than expected costs including feedstock; the supply/demand considerations for Occidental's products; any general economic recession domestically or internationally; and not successfully completing any expansion, capital expenditure or acquisition. The United States Securities and Exchange Commission (SEC) permits oil and natural gas companies, in their filings with the SEC, to disclose only proved reserves demonstrated by actual production or conclusive formation tests to be economically producible under existing economic and operating conditions. We use certain terms in this presentation, such as probable, possible and recoverable reserves, that the SEC's guidelines strictly prohibit us from using in filings with the SEC. U.S. investors are urged to consider carefully the disclosure in our form 10-K, available through the following toll-free telephone number, 1-888-OXYPETE (1-888-699-7383) or on the Internet at <http://www.oxy.com>. You also can obtain a copy from the SEC by calling 1-800-SEC-0330.

NATURAL GAS (MMCF)

Pakistan	50	50
	----	----

BARRELS OF OIL EQUIVALENT (MBOE) 478 352

 United States: Liquids production increases in the first quarter 2001 reflect the Altura and THUMS acquisitions which occurred in the second quarter 2000. Natural gas increases in California and in Permian reflect the Altura and THUMS acquisition. The decrease in 2001 natural gas U.S. other reflects the sale of the Gulf of Mexico properties in the third quarter of last year.

Latin America: The decrease in Colombia's oil production is a result of pipeline disruption. The decline in Ecuador's production is a result of a farm out of 40 percent of Occidental's interest to Alberta Energy Company in the fourth quarter of last year.

CHLORINE	OXYCHEM	INDUSTRY (Chlorine Institute)
-----	-----	-----
Operating Rate (U.S.): 1Q-01	85%	88%

OxyChem Commentary

- o The chlorine price weakness continued during the 1st quarter due to overall economic weakness and softness in the vinyls and TiO2 segments and the seasonal slowdown in the bleach and repackaging markets. Operating rates have remained low. However, demand is expected to improve with economic recovery.
- o Demand in the export vinyls (EDC) segment is expected to remain weak.
- o Additional increases over the 4th quarter in power and natural gas costs continue to squeeze margins.

Influencing Factors:

Demand into the vinyls sector will continue to be adversely affected by reduced housing/construction demand and the general economic slowdown. With limited new production capacity, returning demand will drive long-term volume and upward price pressures.

19

Investor Relations Supplemental Schedules

[OXY LOGO]

CAUSTIC

OxyChem Commentary

- o OxyChem's 1st quarter average net domestic prices have improved due to the low operating rates. A shift to "List Prices", effective January 2001, has enabled the implementation of price increases where the opportunity exists.
- o Supply remains low as a result of reduced chlorine operating rates. OxyChem has implemented a 75% allocation program due to low inventories. This allocation is expected to remain in place for the balance of the year as the low operating rates are expected to continue.

Influencing Factors:

Lower operating rates will continue to limit supply and allow prices to remain stable.

EDC

OxyChem Commentary

- o Demand is expected to continue to decline due to the continued softness in the Far East vinyls segment.

Influencing Factors:

Lower demand into the export vinyls market continues to soften pricing from all-time highs in 2000.

PVC/VCM

OXYCHEM

INDUSTRY (CHEM DATA)

Edgar Filing: OCCIDENTAL PETROLEUM CORP /DE/ - Form 8-K

Operating Rates (U.S.): 1Q-01 95% 86%

OxyChem Commentary

- o Domestic PVC prices increased \$.03/lb through the 1st quarter as energy costs remain well above historical levels.
- o Domestic demand improved but was well below 1st quarter 2000 levels as converters remain cautious and are careful not to build inventories for the Spring construction period as overall economic weakness may persist.
- o Export prices to Asia after reaching a high of \$620/MT for March shipments have since dropped to levels near \$580/MT as supply/demand balance has weakened.
- o Domestic demand for VCM was moderate.

Influencing Factors:

Product prices will remain under a great deal of pressure until the construction markets strengthen.

Portions of this presentation are forward-looking and involve risks and uncertainties that could significantly affect expected results. Factors that could cause results to differ materially include, but are not limited to: global commodity pricing fluctuations; competitive pricing pressures; higher than expected costs including feedstock; the supply/demand considerations for Occidental's products; any general economic recession domestically or internationally; and not successfully completing any expansion, capital expenditure or acquisition.
