RADVISION and Nortel Team to Demonstrate 3G Video Community Service at CTIA Wireless Exhibition 2006

Wednesday April 5, 8:30 am ET

RADVISION's Interactive Video Platform Completes Incubation with Nortel's CDMA 1xEV-DO Rev A Platform Live Video Community Application Demonstrates Innovative 3G Service FAIR LAWN, N.J.--(BUSINESS WIRE)--April 5, 2006--RADVISION (Nasdaq: RVSN - News), a leading provider of multimedia conferencing and communications platforms, today announced an innovative video community application will be demonstrated at the CTIA Wireless 2006 Show in Las Vegas, based on RADVISION's Interactive Video Platform and Nortel's 1xEV-DO Rev A access platform.

The demonstration shows multiple parties communicating in a video chat environment known as a video community. This innovative application is targeted at 3G operators to be deployed as a revenue generating and customer retention service.

Based on the RADVISION Interactive Video Platform, the video community service is able to combine video streams from any IP source including video from 3G subscribers' PC's and camera phones streaming content network sources, including pre-recorded and live broadcasts. The Interactive Video Platform combines the various video sources and presents them to the subscribers as a unified picture comprised of several video images that are adjusted and positioned clearly on the mobile screen. The Interactive Video Platform includes a flexible software development interface so that the video service to be deployed by the operator may be quickly created, customized and adapted to the exact needs of the subscriber base without the need to change the client device application.

The RADVISION Interactive Video Platform is already deployed in IMS networks around the world supporting a variety of services including 3G video conferencing, PC to Mobile video conferencing, and video-enabled contact centers.

"RADVISION's Interactive Video Platform enables the creation of compelling new video applications for 3G subscribers. In addition to RADVISION's 3G videoconferencing services and video community demonstration application, the Interactive Video Platform is a flexible video service creation platform that can be used to deploy different types of services ranging from surveillance services to video-enabled contact centers. Our commitment to open standards, including MMD/IMS, promises a smooth and highly interoperable migration for operators deploying our products. We are excited about our cooperation with

## Edgar Filing: RADVISION LTD - Form 6-K

Nortel and the fact that we have successfully completed incubation with their 1xEV-DO Rev A access" said Dr. Amnon Gavish, VP of Service Provider Business Development in RADVISION.

Nortel is providing the access and core components for deployment on CDMA EVDO networks. These components will drive the migration from legacy circuit switched architecture to an all IP network that simplifies and standardizes the way that advanced services, including multimedia, are delivered across the network to subscribers.

Nortel will be demonstrating the video community application running on a CDMA 1xEV-DO Rev A along with RADVISION's Interactive Video Platform at the Nortel booth at CTIA Wireless 2006 Exhibition, Las Vegas, Nevada, during April 5-7.

### About RADVISION (RVSN)

RADVISION (Nasdaq: RVSN - News) is the industry's leading provider of high quality, scalable and easy-to-use products and technologies for videoconferencing, video telephony, and the development of converged voice, video and data over IP and 3G networks. Compal Communications and RADVISION Team to Develop Advanced 3G Mobile Video PDA Phone

Thursday April 6, 8:30 am ET

Major ODM Links RADVISION, Microsoft and Intel in Developing 3G Video PDA Phone  
FAIR LAWN, N.J.--(BUSINESS WIRE)--April 6, 2006--RADVISION (Nasdaq:RVSN - News), a leading provider of multimedia conferencing and communications platforms, announces today that Compal Communications Incorporated (CCI) has licensed RADVISION's leading 3G-324M protocol toolkit, along with professional consulting services, for development of an advanced 3G cellular video Windows Mobile(TM) PDA phone.

The CCI 3G PDA phone includes an advanced video application that will allow subscribers to videoconference and participate in video communities and other revenue generating services. The phone is based on Microsoft(R) Windows Mobile 5.0 operating system and the Intel PXA270 applications processor. RADVISION developed the video application for CCI using its 3G-324M Toolkit, in collaboration with both Microsoft and Intel.

Eitan Livne, General Manager of RADVISION's Asia Pacific region, said "We are pleased that CCI selected us to provide the video-enabling technology and to develop the video application residing on the handset. We worked with both Microsoft and Intel on the integration, and are confident that this is a compelling offering for the embedded mobile environment."

CCI is one of the largest ODMs in the world and relies on reputable sources for technology and application development in order to bring leading products to market cost-effectively and with uncompromising performance and quality. The Intel PXA270 processor is specifically designed for the mobile environment, as is Microsoft's Windows Mobile 5.0 Operating System. RADVISION's 3G-324M toolkit, with its standards compliant WNSRP fast setup time support, is especially suited for the embedded environment due to its high performance and low memory footprint.

The Intel PXA270 processor is a high performance and low power device targeted to the mobile market segment. Barry Evans, General Manager of Intel's Application Processor Business Unit commented "Our Intel XScale(R) processors are an outstanding solution for devices in this demanding market segment. The advanced video application that RADVISION has developed underscores how compelling this device is as a platform for mobile multimedia applications."

Based on the solid Windows CE technology, the Microsoft Windows Mobile 5.0 operating system meets the performance, features and strict memory requirements of cutting edge mobile embedded devices. Jason Lim, Regional Director, Asia Pacific & Japan, Mobile and Embedded Devices Division, Microsoft Corp. added, "We have worked closely with RADVISION in the past, and the successful integration of their video application on top of our operating system is another milestone in our productive relationship. We believe that together we are providing Compal with an excellent product that will raise the standard in 3G
