### Form 10-K

(Mark One)

Annual report pursuant to Section 13 or 15(d) of the Securities þ

Exchange Act of 1934 for the fiscal year ended December 31, 2003. Transition report pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 for the transition period from

Commission File Number 1-13578

# DOWNEY FINANCIAL CORP.

(Exact name of registrant as specified in its charter)

Delaware

(State or other jurisdiction of incorporation or organization)

3501 Jamboree Road, Newport Beach, California (Address of principal executive offices)

92660 (Zip Code)

I.R.S. Employer Identification No.: 33-0633413

Registrant's telephone number, including area code: (949) 854-0300

Securities registered pursuant to Section 12(b) of the Act:

Title of each class Common Stock, \$0.01 par value

Name of each exchange

New York Stock Exchange

Pacific Exchange

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes b No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K."

Indicate by check mark whether the registrant is an accelerated filer (as defined in Exchange Act Rule 12b-2). Yes b No

The aggregate market value of the registrant soutstanding Common Stock held by non-affiliates on June 30, 2003, based upon the closing sale price on that date of \$41.30, as quoted on the New York Stock Exchange, was \$875,744,239.

At February 29, 2004, 27,953,747 shares of the Registrant's Common Stock, \$0.01 par value, were outstanding.

Documents Incorporated by Reference: Portions of the Registrant's Proxy Statement to be filed with the Securities and Exchange Commission in connection with the Annual Meeting of Stockholders to be held April 28, 2004 are incorporated by reference in Part III hereof.

### **PART I**

Certain matters discussed in this Annual Report may constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995 and, as such, may involve risks and uncertainties. These forward-looking statements relate to, among other things, expectations of the business environment in which Downey Financial Corp. ("Downey," "we," "us" and "our") operates, projections of future performance, perceived opportunities in the market and statements regarding our mission and vision. Some forward-looking statements may be identified by use of terms such as "expects," "anticipates," "intends," "plans," "believes," "seeks," "estimates," or words of similar meaning, or future or conditional verbs such as "will," "would," "should," "could" or "may." Our actual results, performance or achievements may differ significantly from the results, performance or achievements expressed or implied in such forward-looking statements. We do not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. For additional information concerning these factors, see Factors That May Affect Future Results Of Operations on page 17.

#### **ITEM 1. BUSINESS**

#### **GENERAL**

We were incorporated in Delaware on October 21, 1994. On January 23, 1995, after we obtained necessary stockholder and regulatory approvals, we acquired 100% of the issued and outstanding capital stock of Downey Savings and Loan Association ("Bank") and the Bank s stockholders became holders of our stock. Downey was thereafter funded by the Bank and presently operates as the Bank s holding company. Our stock is traded on the New York Stock Exchange and Pacific Exchange under the trading symbol "DSL." Corporate governance guidelines, charters for the audit, compensation, and nominating and corporate governance committees of the Board of Directors and code of business conduct and ethics are available (or will be available by April 28, 2004) free of charge from our internet site, www.downeysavings.com by clicking on "Investor Relations" on our home page and proceeding to "Corporate Governance." Annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and all amendments to those reports are posted on our internet site as soon as reasonably practical after we file them with the SEC and available free of charge under "Corporate Filings" on our "Investor Relations" page.

The Bank was formed in 1957 as a California-licensed savings and loan association and converted to a federal charter in 1995. As of December 31, 2003, it conducts its business through 172 retail deposit branches, including 100 full-service, in-store branches. Residential loans are originated or purchased:

- by branch managers and loan officers in our branches;
- by loan officers who solicit loans from realtors and other business sources, including the internet;
- by wholesale loan representatives who obtain loans submitted by mortgage brokers; and
- by purchases of loans from correspondent banking institutions and mortgage bankers.

The Bank is regulated or affected by the following governmental entities and laws:

- As a federally chartered savings association, the Bank s activities and investments are generally governed by the Home Owners Loan Act, as amended, and regulations and policies of the Office of Thrift Supervision ("OTS").
- The Bank and Downey are subject to the primary regulatory and supervisory jurisdiction of the OTS.
- As a federally insured depository institution, the Bank is regulated and supervised by the Federal Deposit Insurance Corporation ("FDIC") with respect to some of its activities and investments.
- The Bank is a member of the Federal Home Loan Bank ("FHLB") of San Francisco, which is one of the 12 regional banks for federally insured depository institutions comprising the FHLB System.
- The Bank's savings deposits are insured through the Savings Association Insurance Fund ("SAIF") of the FDIC, an instrumentality of the United States government.

Page 1	<u>Navigation Links</u>

• The Bank is regulated by the Federal Reserve with respect to reserves the Bank is required to maintain against deposits and other matters.

General economic conditions, the monetary and fiscal policies of the federal government and the regulatory policies of governmental authorities significantly influence our operations. Additionally, interest rates on competing investments and general market interest rates influence our deposit flows and the costs we incur on interest-bearing liabilities, which represents our cost of funds. Similarly, market interest rates and other factors that affect the supply of and demand for housing and the availability of funds affect our loan volume, our yields on loans and mortgage-backed securities as well as the valuation of our mortgage servicing rights associated with the portfolio of loans we service for others.

Our primary business is banking and we are also involved in real estate investments, each of which we discuss further below.

### **BANKING ACTIVITIES**

Our primary business is banking. Our banking activities focus on:

- attracting funds from the general public and institutions and obtaining borrowings; and
- originating and investing in loans, primarily residential real estate mortgage loans, investment securities and mortgage-backed securities.

These mortgage-backed securities include mortgage pass-through securities issued by other entities and securities issued or guaranteed by government-sponsored enterprises like the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation and the Government National Mortgage Association.

Our primary sources of revenue from our banking business are:

- interest we earn on loans, investment securities and mortgage-backed securities;
- fees we earn in connection with loans and deposits;
- gains on sales of our loans, investment securities and mortgage-backed securities; and
- income we earn on loans and mortgage-backed securities we service for investors.

Our principal expenses in connection with our banking business are:

- interest we incur on our interest-bearing liabilities, including deposits and borrowings; and
- general and administrative costs.

Our primary sources of funds from our banking business are:

- deposits;
- principal and interest payments on our loans, investment securities and mortgage-backed securities;
- proceeds from sales of our loans, investment securities and mortgage-backed securities; and
- borrowings.

Scheduled payments we receive on our loans and mortgage-backed securities and certain fees from loans and deposits are a relatively stable source of funds. However, the funds we receive from the prepayment of loans and mortgage-backed securities vary widely. Below is a detailed discussion of our banking activities.

#### **Lending Activities**

Historically, our lending activities have primarily emphasized our origination of first mortgage loans secured by residential properties and retail neighborhood shopping centers. To a lesser extent, our lending activities have emphasized our origination of real estate loans secured by multi-family and commercial properties, including land and other properties with income producing capabilities and consumer loans, primarily home equity loans and

Page 2 <u>Navigation Links</u>

home equity lines of credit. In addition, we have provided construction loan financing for single family and multi-family residential properties and commercial retail neighborhood shopping center projects. These construction loan financings have included loans to joint ventures, which were being engaged in by DSL Service Company, a wholly owned subsidiary of the Bank, with other participants. We also originate loans to businesses.

Our primary focus continues to be our origination of adjustable rate single family mortgage loans for portfolio, including subprime loans which carry higher interest rates. In addition, we will originate for portfolio other loans including:

- · multi-family loans;
- commercial real estate loans;
- construction and land loans to developers;
- loans to individuals for the construction and permanent financing of single family homes; and
- consumer loans.

We will also continue our secondary marketing activities of originating and selling single family mortgage loans to various investors.

For more information, see Secondary Marketing and Loan Servicing Activities on page 5. For additional information on the composition of our loan and mortgage-backed securities portfolio, see Loans and Mortgage-Backed Securities on page 34.

### Loan and Mortgage-Backed Securities Portfolio

We carry loans receivable held for investment at cost. Our net loans receivable are adjusted for unamortized premiums and unearned discounts, which are amortized into interest income using the interest method. Our investments in mortgage-backed securities represent participating interests in pools of first mortgage loans originated and serviced by the issuers of the securities. We carry mortgage-backed securities held to maturity at unpaid principal balances, which are adjusted for unamortized premiums and unearned discounts. We amortize premiums and discounts on mortgage-backed securities by using the interest method over the remaining period to contractual maturity, adjusted for anticipated prepayments.

We identify loans that may be sold before their maturity. In our balance sheets, we classify these as loans held for sale and record them at the lower of cost or fair value. The cost includes a basis adjustment to the loan at funding resulting from the change in the fair value of the associated interest rate lock derivative from the date of commitment to the date of funding. We recognize net unrealized losses on these loans, if any, in a valuation allowance by making charges to our income.

We carry mortgage-backed securities available for sale at fair value. In stockholders equity, we report net unrealized gains or losses on these securities, net of income taxes, as accumulated other comprehensive income until realized, unless the security is deemed other than temporarily impaired. If the security is determined to be other than temporarily impaired, we charge the amount of the impairment to operations.

#### Residential Real Estate Lending

Our primary lending activity is our origination of mortgage loans secured by single family residential properties consisting of one-to-four units located primarily in California. We provide these loans for borrowers to purchase residences or to refinance their existing mortgages and typically have contractual maturities at origination of 15 to 40 years. To limit the interest rate risk associated with these 15- to 40-year maturities, we, among other things, principally originate adjustable rate mortgages for our own loan portfolio. For more information, see Asset/Liability Management on page 8. We also originate residential fixed rate mortgage loans to meet consumer demand, but we sell the majority of these loans in the secondary market, rather than hold them in our portfolio. We may, however, place residential fixed rate loans in our portfolio of loans held for investment if these fixed rate loans are funded with long-term funds to mitigate interest rate risk. In addition, we originate a small volume of fixed rate loans for our own investment if they meet specific yield and other approved guidelines, or to facilitate our sale of real estate acquired in settlement of loans. The average term of these fixed rate mortgage loans we originate for our own portfolio historically has been significantly shorter than their contractual maturity as a result of home sales or refinancings and prepayments. For more information, see Secondary Marketing and Loan Servicing Activities on page 5.

Page 3 Navigation Links

Our adjustable rate mortgages:

- generally either begin with an incentive interest rate, which is an interest rate below the current market rate, that adjusts to the applicable index plus a defined spread, subject to periodic and lifetime caps, after one, three, six or twelve months, or are fixed for a period of three to five years then adjust semi-annually or annually thereafter;
- generally provide that the maximum interest rate cannot exceed the incentive rate by more than six to nine percentage points, depending on the type of loan and the initial rate offered; and
- limit interest rate adjustments, for loans that adjust both the interest rate and payment amount simultaneously, to 1% per adjustment period for those that adjust semi-annually and 2% per adjustment period for those that adjust annually.

Most of our adjustable rate mortgages adjust the interest rate monthly and the payment amount annually. These monthly adjustable rate mortgages:

- have a lifetime interest rate cap, but no specified periodic interest rate adjustment cap;
- have a periodic cap on changes in required monthly payments; and
- allow for negative amortization, which is the addition to loan principal of accrued interest that exceeds the required monthly loan payments.

If a loan incurs significant negative amortization, the loan-to-value ratio could increase which also increases credit risk, as the fair value of the underlying collateral could be insufficient to satisfy fully the outstanding principal and interest. A loan-to-value ratio is the ratio of the principal amount of the loan to the lower of the sales price or appraised value of the property securing the loan at origination. We currently impose a limit on the amount of negative amortization. The principal plus the negative amortization cannot exceed 125% of the original loan amount, except for subprime loans and loans with loan-to-value ratios of greater than 80% where the borrower has obtained private mortgage insurance to reduce the effective loan-to-value ratio to between 67% and 80%. In those two instances, the principal plus negative amortization cannot exceed 110% of the original loan amount. At year-end 2003,

loans with the higher 125% limit on negative amortization represented 28% of our adjustable rate one-to-four unit residential portfolio, while those with the 110% limit represented 45%. We permit adjustable rate mortgages to be assumed by qualified borrowers.

During 2003, approximately 72% of our one-to-four unit residential real estate loans were originated or purchased through outside mortgage brokers. These mortgage brokers do not operate from our offices and are not our employees. Our branch managers and residential loan officers originated approximately 28% of our one-to-four unit residential loans during 2003.

We require that our residential real estate loans be approved at various levels of management, depending upon the amount of the loan. On a single family residential loan we originate for our portfolio, the maximum amount we generally will lend is \$2 million. Our average loan size, however, is much lower. In 2003, our average loan size was \$354,000. We generally make loans with loan-to-value ratios not exceeding 80%. We will make loans with loan-to-value ratios of over 80%, if the borrower obtains private mortgage insurance to reduce the effective loan-to-value ratio to between 67% and 80%, consistent with secondary marketing requirements. In addition, we require that borrowers obtain hazard insurance for all residential real estate loans covering the lower of the loan amount or the replacement value of the residence.

In our approval process for the loans we originate or purchase, we assess both the value of the property securing the loan and the applicant s ability to repay the loan. Qualified appraisers on our staff or approved outside appraisers establish the value of the collateral through appraisals or alternative valuation formats that meet regulatory requirements. Appraisal reports prepared by outside appraisers are selectively reviewed by our staff appraisers or by approved fee appraisers. We generally obtain information about the applicant s income, financial condition, employment and credit history. Typically, we will verify an applicant s credit information for loans originated by our retail loan representatives. For loans submitted from outside mortgage brokers, we require the mortgage broker to obtain, review and verify the applicant s credit information and employment.

We offer one-to-four unit residential loans to borrowers who have or, in the case of purchases, will have equity in their homes but whose credit rating contains exceptions which preclude them from qualifying for lower or better market interest rates and terms. We refer to these lower rated credits, which we characterize as "A-," "B" and "C" loans, as subprime loans in our loan portfolio. Our subprime loans are characterized by lower loan-to-

Page 4 <u>Navigation Links</u>

value ratios and higher average interest rates than higher credit grade prime loans or "A" loans. We believe these lower credit rated borrowers represent an opportunity for us to earn a higher net return for the risks we assume. For further information, see Regulatory Capital Requirements on page 11.

We currently qualify applicants of our adjustable rate mortgages at the higher of the fully-indexed rate or:

- for prime borrowers:
  - 5.25% for owner occupied; or
  - 5.50% for non-owner occupied.
- for subprime borrowers:
  - 6.25% for owner occupied; or
  - 6.50% for non-owner occupied.

#### Secondary Marketing and Loan Servicing Activities

As part of our secondary marketing activities, we originate residential real estate adjustable rate mortgages and fixed rate mortgages that we intend to sell. Accordingly, we classify these loans as held for sale and carry them at the lower of cost or fair value. The cost includes a basis adjustment to the loan at funding resulting from the change in the fair value of the associated interest rate lock derivative from the date of commitment to the date of funding. These loans are primarily secured by first liens on one-to-four unit residential properties and generally have maturities of 30 years or less.

We believe that servicing loans for others can be an important asset/liability management tool because it produces operating results which, in response to changes in market interest rates, tend to move opposite to changes in net interest income. Because yields on adjustable rate mortgages take longer to adjust to market interest rates than their funding sources, net interest income associated with these loans is expected to decline in periods of rising interest rates and increase in periods of falling rates. In contrast, the value of a loan servicing portfolio normally:

• increases as interest rates rise and loan prepayments decrease; and

• declines as interest rates fall and loan prepayments increase.

In addition, increased levels of servicing activities and the opportunity to offer our other financial services in servicing loans for others can provide us with additional income with minimal additional overhead costs.

Depending upon market pricing for servicing, we sell loans either servicing retained or servicing released. When we sell loans servicing retained, we record gains or losses from these loans at the time of sale. We calculate gains or losses from our sale as the difference between the net sales proceeds and the allocated basis of the loans sold. We capitalize mortgage servicing rights we acquire through either our purchase or origination of mortgage loans we have sold with servicing rights retained. We allocate the total cost of the mortgage loans sold to both the mortgage servicing rights and to the mortgage loans without mortgage servicing rights based on their relative fair values. We disclose our mortgage servicing rights in our financial statements and include them as a component of the gain on sale of loans. We recognize impairment losses on the mortgage servicing rights through a valuation allowance and record any associated provision as a component of loan servicing income (loss), net category. For further information, see Note 1 on page 72 and Note 11 on page 88 of Notes to the Consolidated Financial Statements.

Generally, we use hedging programs to manage the interest rate risk of our secondary marketing activities. For further information, see Asset/Liability Management and Market Risk on page 45.

We may exchange loans we originate for sale with government-sponsored agencies for mortgage-backed securities collateralized by these loans. Our cost for the exchange, a monthly guaranty fee, is expressed as a percentage of the unpaid principal balance and is deducted from interest income. The securities we receive can be used to collateralize various types of our borrowings at rates that frequently are more favorable than rates on other types of liabilities and also carry a lower risk-based capital requirement than whole loans. We carry these mortgage-backed securities available for sale at fair value. However, we record no gain or loss on the exchange

Page 5 <u>Navigation Links</u>

in our statement of income until the securities are sold to a third party, usually that same day. Before we sell these securities to third parties, we show all changes in fair value as a separate component of stockholders equity as accumulated other comprehensive income, net of income taxes.

### Multi-Family and Commercial Real Estate Lending

We have provided permanent loans secured by multi-family and retail neighborhood shopping center properties. Our major loan officers conduct our multi-family and commercial real estate lending activities.

Multi-family and commercial real estate loans generally entail additional risks as compared to single family residential mortgage lending. We subject each loan, including loans to facilitate the sale of real estate we own, to our underwriting standards, which generally include:

- our evaluation of the creditworthiness and reputation of the borrower; and
- the amount of the borrower s equity in the project as determined on the basis of appraisal, sales and leasing information on the property and cash flow projections.

To protect the value of the security for our loan, we require borrowers to maintain casualty insurance for the loan amount or replacement cost. In addition, for non-residential loans in excess of \$500,000, we require the borrower to obtain comprehensive general liability insurance. All commercial real estate loans we originate must be approved by at least two of our officers, one of whom must be the originating loan account officer and the other a designated officer with appropriate loan approval authority.

#### **Construction Lending**

We have provided construction loan financing for single family and multi-family residential properties and commercial real estate projects, like retail neighborhood shopping centers. Our major loan officers principally originate these loans. We generally make construction loans at floating interest rates based upon the prime or reference rate of a major commercial bank. Generally, we require a loan-to-value ratio of 75% or less on construction lending and we subject each loan to our underwriting standards.

Construction loans involve risks different from completed project lending because we advance loan funds based upon the security of the completed project under construction. If the borrower defaults on the loan, then we may have to advance additional funds to finance the project s completion before the project can be sold. Moreover, construction projects are affected by

uncertainties inherent in estimating:

- construction costs;
- potential delays in construction time;
- market demand; and
- the accuracy of the value on the completed project.

When providing construction loans, we require the general contractor to, among other things, carry contractor s liability insurance equal to specific prescribed minimum amounts, carry builder s risk insurance and have a blanket bond against employee misappropriation.

#### Commercial Lending

We maintain traditional private banking credit products and services for our existing high net worth, relationship based customers. Our portfolio emphasis is toward secured, floating rate credit facilities. We also provide commercial deposit account products and services to meet the needs of business relationships maintained at the Bank.

#### Consumer Lending

The Bank originates home equity loans and home equity lines of credit, and other consumer loan products. Before we make a consumer loan, we assess the applicant sability to repay the loan and, if applicable, the value of the collateral securing the loan. The risk involved with home equity loans and home equity lines of credit is similar to the risk involved with residential real estate loans. We offer customers a credit card through a third party, who extends the credit and services the loans made to our customers.

Page 6 <u>Navigation Links</u>

#### **Investment Activities**

As a federally chartered savings association, the Bank s ability to make securities investments is prescribed under the OTS regulations and the Home Owners Loan Act. The Bank s authorized officers make investment decisions within guidelines established by the Bank s Board of Directors. The Bank manages these investments in an effort to produce the highest yield, while at the same time maintaining safety of principal, minimizing interest rate risk and complying with applicable regulations.

We carry securities held to maturity at amortized cost. We adjust these costs for amortization of premiums and accretion of discounts, which we recognize in interest income using the interest method. We carry securities available for sale at fair value. We exclude unrealized holding gains and losses, or valuation allowances established for net unrealized losses, from our earnings and report them as a separate component of our stockholders—equity as accumulated other comprehensive income, net of income taxes, unless the security is deemed other than temporarily impaired. If the security is determined to be other than temporarily impaired, we charge the amount of the impairment to operations. For further information on the composition of our investment portfolio, see Investment Securities on page 39.

#### **Deposit Activities**

We prefer to use deposits raised through our retail branch system as our principal source of funds for supporting our lending activities, because the cost of these funds generally is less than that of borrowings or other funding sources with comparable maturities. We traditionally have obtained our deposits primarily from areas surrounding the Bank s branch offices. However, we occasionally raise some retail deposits from institutions through Wall Street activities.

General economic conditions affect deposit flows. Funds may flow from depository institutions such as savings associations into direct vehicles like government and corporate securities or other financial intermediaries. Our ability to attract and retain deposits will continue to be affected by money market conditions, prevailing interest rates and available competing investment vehicles. Generally, state or federal regulation does not restrict interest rates we pay on deposits.

For further information, see Deposits on page 42.

#### **Borrowing Activities**

Besides deposits, we have utilized other sources to fund our loan origination and other business activities. We have at times relied upon our borrowings from the FHLB of San Francisco or the issuance of corporate debt as an additional source of funds. The FHLB of San Francisco makes advances to us through several different credit programs it offers.

From time to time, we obtain additional sources of funds by selling some of our securities and mortgage loans under agreements to repurchase. These reverse repurchase agreements are generally short-term and are collateralized by our mortgage-backed and investment securities or our mortgage loans. We only deal with investment banking firms that are recognized as primary dealers in U.S. government securities or major commercial banks in connection with these reverse repurchase agreements. In addition, we limit the amounts of our borrowings from any single institution.

Another source of funds has come from the issuance of junior subordinated debentures to Downey Financial Capital Trust I ("Trust"), a wholly owned, special purpose entity, whose sole purpose was to raise money through the sale of capital securities.

For further information, see Borrowings on page 43.

#### **Earnings Spread**

Our primary source of earnings comes from our net interest income. We determine our net interest income or the interest rate spread by calculating the difference between:

• the yield we earn on our interest-earning assets like loans, mortgage-backed securities and investment securities; and

Page 7 <u>Navigation Links</u>

• the cost we pay on our interest-bearing liabilities like deposits and borrowings.

Our net interest income is also determined by the relative dollar amounts of our interest-earning assets and interest-bearing liabilities.

Our effective interest rate spread, which reflects the relative level of our interest-earning assets to our interest-bearing liabilities, equals:

- the difference between interest income on our interest-earning assets and interest expense on our interest-bearing liabilities, divided by
- our average interest-earning assets for the period.

For information regarding our net income and the components thereof and for management s analysis of our financial condition and results of operations, see Management s Discussion and Analysis of Financial Condition and Results of Operations beginning on page 23. For information regarding the return on our assets and other selected financial data, see Selected Financial Data on page 21.

### **Asset/Liability Management**

Savings institutions are affected by interest rate risks to the degree that their interest-bearing liabilities, consisting principally of customer deposits, FHLB advances and other borrowings, mature or reprice on a different basis than their interest-earning assets, which consist predominantly of intermediate or long-term real estate loans. While having liabilities that on average mature or reprice more frequently than assets may be beneficial in times of declining interest rates, this asset/liability structure may result in declining net earnings during periods of rising interest rates. Our principal objectives are to actively monitor and manage the effects of adverse changes in interest rates on our net interest income while maintaining our asset quality. To improve the rate sensitivity and maturity balance of our interest-earning assets and liabilities, we have emphasized the origination of loans with adjustable interest rates or relatively short maturities. Loans with adjustable interest rates have the beneficial effect of allowing the yield on our assets to increase during periods of rising interest rates, although these loans have contractual limitations on the frequency and extent of interest rate adjustments.

For further information, see Lending Activities on page 2 and Asset/Liability Management and Market Risk on page 45.

#### **Insurance Agency Activities**

Downey Affiliated Insurance Agency was incorporated on January 25, 1995, as Downey s wholly owned subsidiary. We capitalized Downey Affiliated Insurance Agency on February 24, 1995 with \$400,000. In the 1995 second quarter, Downey Affiliated Insurance Agency commenced operations at which time representatives of Downey Affiliated Insurance Agency were available in our branches to offer annuity products. During 1996, Downey Affiliated Insurance Agency began offering forced-placed casualty insurance policies on mortgage loans and stopped offering annuity products. The offering of forced-placed casualty insurance policies ceased in April 1999.

#### **REAL ESTATE INVESTMENT ACTIVITIES**

In addition to our primary business of banking, which has been described above, we are also involved in real estate investment activities, which are conducted primarily through DSL Service Company, a wholly owned subsidiary of the Bank. DSL Service Company is a diversified real estate development company which was established in 1966 as a neighborhood shopping center and residential tract developer. Today its capabilities include development, construction and property management activities relating to its portfolio of projects primarily within California, but also in Arizona. In addition, DSL Service Company associates with other qualified developers to engage in joint ventures. The primary revenue sources of our real estate investment activities net rental income and gains from the sale of real estate investments. The primary expenses of our real estate investment activities are interest expense and general and administrative expense.

Due to federal law, the Bank is prohibited from making new investments in real estate development and joint venture operations and is required to deduct the full amount of its investment in DSL Service Company in calculating its applicable ratios under the core, tangible and risk-based capital standards. Savings associations generally may invest in service corporation subsidiaries, like DSL Service Company, to the extent of 2% of the

Page 8 <u>Navigation Links</u>

association s assets, plus up to an additional 1% of assets for investments which serve primarily community, inner-city or community development purposes. In addition, "conforming loans" by the Bank to DSL Service Company joint venture partnerships are limited to 50% of the Bank s risk-based capital. "Conforming loans" are those generally limited to 80% of appraised value, bear a market rate of interest and require payments sufficient to amortize the principal balance of the loan. We are in compliance with each of these investment limitations.

To the extent Downey or a subsidiary of Downey, other than the Bank or its subsidiaries, makes real estate investments, the above-mentioned capital deductions and limitations do not apply, as they only pertain to the specific investments by savings associations or their subsidiaries.

For further information, see Investments in Real Estate and Joint Ventures on page 40.

#### COMPETITION

We face competition both in attracting deposits and in making loans. Our most direct competition for deposits has historically come from other savings institutions and from commercial banks located in our principal market areas, including many large financial institutions based in other parts of the country or their subsidiaries. In addition, we face additional significant competition for investors funds from short-term money market securities and other corporate and government securities. Our ability to attract and retain savings deposits depends, generally, on our ability to provide a rate of return, liquidity and risk comparable to that offered by competing investment opportunities and the appropriate level of customer service.

We experience competition for real estate loans principally from other savings institutions, commercial banks, mortgage banking companies and insurance companies. We compete for loans principally through our interest rates and loan fees we charge and our efficiency and quality of services we provide borrowers and real estate brokers.

#### **EMPLOYEES**

At December 31, 2003, we had 2,355 full-time employees and 649 part-time employees. We provide our employees with health and welfare benefits and a retirement and savings plan. Additionally, we offer qualifying employees participation in our stock purchase plan. Our employees are not represented by any union or collective bargaining group, and we consider our employee relations to be good.

#### **REGULATION**

#### General

Federal and state law extensively regulate savings and loan holding companies and savings associations. This regulation is intended primarily to protect our depositors and the SAIF and is not for the benefit of our stockholders. Below we describe some of the regulations applicable to us and the Bank. We do not claim this discussion is complete and qualify our discussion by reference to applicable statutory or regulatory provisions.

### **Regulation of Downey**

#### General

We are a savings and loan holding company and are subject to regulatory oversight by the OTS. We are required to register and file reports with the OTS and are regulated and examined by the OTS. The OTS has enforcement authority over us, which also permits the OTS to restrict or prohibit our activities that it determines to be a serious risk to the Bank.

#### **Activities Restrictions**

As a savings and loan holding company with only one savings and loan association subsidiary, we generally are not limited by OTS activity restrictions, provided the Bank satisfies the qualified thrift lender test or meets the definition of a domestic building and loan association in the Internal Revenue Code. If we acquire control of another savings association as a separate subsidiary of Downey, we would become a multiple savings and loan holding company. As a multiple savings and loan holding company, our activities, other than the activities of the Bank or any other SAIF-insured savings association, would become subject to restrictions applicable to bank holding companies unless these other savings associations were acquired in a supervisory acquisition and each also satisfies the qualified thrift lender test or meets the definition of a domestic building and

Page 9 Navigation Links

loan association. Furthermore, if in the future we sold control of the Bank to any other company, such company would not succeed to our grandfathered status as a unitary thrift holding company and would be subject to the same business activity restrictions as a bank holding company. For more information, see Qualified Thrift Lender Test on page 13.

#### Restrictions on Acquisitions

We must obtain approval from the appropriate bank regulatory agencies before acquiring control of any insured depository institution. The OTS generally prohibits these types of acquisitions if they result in a multiple savings and loan holding company controlling savings associations in more than one state. However, the OTS permits interstate acquisitions if the acquisition is authorized by specific state authorization or a supervisory acquisition of a failing savings association.

Federal law generally provides that no "person," acting directly or indirectly or through or in concert with one or more other persons, may acquire "control" of a federally insured savings association unless the person gives at least 60 days written notice to the OTS. The OTS then has the opportunity to disapprove the proposed acquisition. In addition, no company may acquire control of this type of an institution without prior OTS approval. These provisions also prohibit, among other things, any director or officer of a savings and loan holding company, or any individual who owns or controls more than 25% of the voting shares of a savings and loan holding company, from acquiring control of any savings association not a subsidiary of the savings and loan holding company, unless the acquisition is approved by the OTS.

#### The Sarbanes-Oxlev Act of 2002

On July 30, 2002, the Sarbanes-Oxley Act was signed into law. This new legislation and subsequent regulations address accounting oversight and corporate governance matters, including:

- the creation of a five-member oversight board appointed by the Securities and Exchange Commission ("SEC") that will set standards for accountants and have investigative and disciplinary powers;
- the prohibition of accounting firms from providing various types of consulting services to public clients and requiring accounting firms to rotate partners among public client assignments every five years;
- increased penalties for financial crimes;
- expanded disclosure of corporate operations and internal controls and certification of financial statements;
- increased requirements for board audit committees and their members;
- enhanced controls on and reporting of insider trading; and

• statutory separations between investment bankers and analysts.

The new legislation and its implementing regulations will result in increased costs of compliance, including certain outside professional costs.

#### Regulation of the Bank

#### **General**

The OTS and the FDIC extensively regulate the Bank because the Bank is a federally chartered, SAIF-insured savings association. The Bank must ensure that its lending activities and its other investments comply with various statutory and regulatory requirements. The Bank is also regulated by the Federal Reserve.

The OTS, in conjunction with the FDIC, regularly examines the Bank and prepares reports for the Bank s Board of Directors to consider with respect to any deficiencies the OTS or the FDIC finds in the Bank s operations. Federal and state laws also regulate the relationship between the Bank and its depositors and borrowers, especially in matters regarding the ownership of savings accounts and the documents used by the Bank.

The Bank must file reports with the OTS and the FDIC concerning its activities and financial condition. In addition, the Bank must obtain regulatory approvals before entering into some transactions like mergers with or acquisitions of other financial institutions. This regulation and supervision establishes a comprehensive framework of activities in which an institution may engage and is intended primarily to protect the SAIF and our depositors. The regulatory structure also gives the regulatory authorities extensive discretion in connection with their supervisory and enforcement activities and examination policies, including policies regarding the classification of assets and adequate loan loss reserves for regulatory purposes. Any change in regulations,

Page 10 <u>Navigation Links</u>

whether by the OTS, the FDIC, the Federal Reserve or the Congress, could have a material adverse impact on us, the Bank and our operations.

#### Insurance of Deposit Accounts

The SAIF, as administered by the FDIC, insures the Bank s deposit accounts up to the maximum amount permitted by law. The FDIC may terminate insurance of deposits upon a finding that the institution:

- has engaged in unsafe or unsound practices;
- is in an unsafe or unsound condition to continue operations; or
- has violated any applicable law, regulation, rule, order or condition imposed by the FDIC or the OTS.

The FDIC charges an annual assessment for the insurance of deposits based on the risk a particular institution poses to its deposit insurance fund. Under this system during 2003, SAIF members paid within a range of 0% to 0.27% of insured domestic deposits, depending upon the institution s risk classification. This risk classification is based on an institution s capital group and supervisory subgroup assignment.

The Bank also pays, in addition to its normal deposit insurance premium as a member of the SAIF, assessments towards the retirement of the Financing Corporation Bonds (known as FICO Bonds) issued in the 1980s to assist in the recovery of the savings and loan industry. These assessments will continue until the FICO Bonds mature in 2017. For the fourth quarter of 2003, this assessment was equal to 0.0154% of insured deposits.

#### Regulatory Capital Requirements

The Bank must meet regulatory capital standards to be deemed in compliance with OTS capital requirements. OTS capital regulations require savings associations to meet the following three capital standards:

- tangible capital equal to 1.5% of total adjusted assets;
- leverage capital, or "core capital," equal to 3% of total adjusted assets for institutions such as the Bank; and
- risk-based capital equal to 8.0% of total risk-based assets.

The OTS views its capital regulation requirements as minimum standards, and it expects most institutions to maintain capital levels well above the minimum. In addition, the OTS regulations provide that the OTS may establish minimum capital levels higher than those provided in the regulations for individual savings associations, upon a determination that the savings association s capital is or may become inadequate in view of its circumstances. The OTS regulations provide that higher individual minimum regulatory capital requirements may be appropriate in circumstances where, among others, a savings association:

- has a high degree of exposure to interest rate risk, prepayment risk, credit risk, concentration of credit risk, other risks arising from nontraditional activities, or similar risks or a high proportion of off-balance sheet risk;
- is growing, either internally or through acquisitions, at a rate that presents supervisory issues; or
- may be adversely affected by activities or the condition of its holding company, affiliates, subsidiaries or other persons, or savings associations with which it has significant business relationships.

The Bank is not required to meet any individual minimum regulatory capital requirement. At December 31, 2003, the Bank is regulatory capital exceeded all minimum regulatory capital requirements.

As a result of a number of federally insured financial institutions extending their lending risk selection standards to attract lower credit quality borrowers due to their loans having higher interest rates and fees, the federal banking regulatory agencies jointly issued Interagency Guidelines on Subprime Lending. Subprime lending involves extending credit to individuals with less than perfect credit histories.

The guidelines consider subprime lending a high-risk activity that is unsafe and unsound if the risks associated with subprime lending are not properly controlled. Specifically, the 2002 guidelines direct examiners to

Page 11 <u>Navigation Links</u>

expect regulatory capital one and one-half to three times higher than that typically set aside for prime assets for institutions that:

- have subprime assets equal to 25% or higher of Tier 1 capital, or
- have subprime portfolios experiencing rapid growth or adverse performance trends, are administered by inexperienced management, or have inadequate or weak controls.

Our subprime portfolio, pursuant to our definition, represented 107% of Tier 1 capital as of year-end 2003. The OTS notified us that as of March 31, 2003, we were required to risk weight our subprime residential loans at 75% versus their current 50% risk weighting. This change increased the required regulatory capital associated with our subprime loans by one and one-half times that of prime residential loans.

The Home Owners Loan Act permits savings associations not in compliance with the OTS capital standards to seek an exemption from penalties or sanctions for noncompliance. The OTS will grant an exemption only if the savings association meets strict requirements. In addition, the OTS must deny the exemption in some circumstances. If the OTS does grant an exemption, the savings association still may be exposed to enforcement actions for other violations of law or unsafe or unsound practices or conditions.

### Prompt Corrective Action

The OTS is prompt corrective action regulation requires the OTS to take mandatory actions and authorizes the OTS to take discretionary actions against a savings association that falls within undercapitalized capital categories specified in the regulation.

The regulation establishes five categories of capital classification:

- "well capitalized;"
- "adequately capitalized;"
- "undercapitalized:"
- "significantly undercapitalized;" and
- "critically undercapitalized."

The regulation uses an institution s risk-based capital, leverage capital and tangible capital ratios to determine the institution s capital classification. At December 31, 2003, the Bank exceeded the capital requirements of a well capitalized institution under applicable OTS regulations.

#### Predatory Lending

The term "predatory lending," much like the terms "safety and soundness" and "unfair and deceptive practices," is far-reaching and covers a potentially broad range of behavior. As such, it does not lend itself to a concise or a comprehensive definition. But typically predatory lending involves at least one, and perhaps all three, of the following elements:

- making unaffordable loans based on the assets of the borrower rather than on the borrower s ability to repay an obligation ("asset-based lending");
- inducing a borrower to refinance a loan repeatedly in order to charge high points and fees each time the loan is refinanced ("loan flipping"); and/or
- engaging in fraud or deception to conceal the true nature of the loan obligation from an unsuspecting or unsophisticated borrower.

Federal Reserve Bank regulations aimed at curbing such lending significantly widen the pool of high-cost home-secured loans covered by the Home Ownership and Equity Protection Act of 1994, a federal law that requires extra disclosures and consumer protections to borrowers. The following triggers coverage under the act:

• interest rates for first lien mortgage loans in excess of 8 percentage points above comparable Treasury securities;

Page 12 <u>Navigation Links</u>

- subordinate-lien loans of 10 percentage points above Treasury securities; and
- fees such as optional insurance and similar debt protection costs paid in connection with the credit transaction, when combined with points and fees if deemed excessive.

In addition, the act bars loan flipping by the same lender or loan servicer within a year. Lenders also will be presumed to have violated the law which says loans shouldn t be made to people unable to repay them unless they document that the borrower has the ability to repay. Lenders that violate the rules face cancellation of loans and penalties equal to the finance charges paid.

We do not expect these rules and potential state action in this area to have a material impact on our financial condition or results of operation. State action in this area, however, could impact our operations.

#### Loans-to-One-Borrower

Savings associations generally are subject to the lending limits applicable to national banks. With limited exceptions, the maximum amount that a savings association or a national bank may lend to any borrower, including some related entities of the borrower, at one time may not exceed:

- 15% of the unimpaired capital and surplus of the institution, plus
- an additional 10% of unimpaired capital and surplus if the loans are fully secured by readily marketable collateral.

Savings associations are additionally authorized to make loans to one borrower, for any purpose:

- in an amount not to exceed \$500,000; or
- by order of the Director of OTS, in an amount not to exceed the lesser of \$30 million or 30% of unimpaired capital and surplus to develop residential housing, provided:
  - the purchase price of each single-family dwelling in the development does not exceed \$500,000;
  - the savings association is in compliance with its capital requirements:
  - the loans comply with applicable loan-to-value requirements; and
  - the aggregate amount of loans made under this authority does not exceed 15% of unimpaired capital and surplus.

At December 31, 2003, the Bank's loans-to-one-borrower limit was \$147 million based upon the 15% of unimpaired capital and surplus measurement, or \$245 million for loans secured by readily marketable collateral. The Bank's largest lending relationship consisted of nine loans to one of the Bank's directors totaling a commitment of \$20 million, of which \$19 million had been disbursed as of December 31, 2003. All such loans are performing in accordance with their loan terms, which are substantially the same terms, including interest rates and collateral, as those prevailing at the time for comparable transactions with

other non-related parties.

### Qualified Thrift Lender Test

The OTS requires savings associations to meet a qualified thrift lender test. The test may be met either by maintaining a specified level of assets in qualified thrift investments as specified in the Home Owners Loan Act or by meeting the definition of a "domestic building and loan association." Qualified thrift investments are primarily residential mortgages and related investments, including some mortgage-related securities. The required percentage of investments under the Home Owners Loan Act is 65% of assets while the Internal Revenue Code requires investments of 60% of assets. An association must be in compliance with the qualified thrift lender test or the definition of domestic building and loan association on a monthly basis in nine out of every twelve months. Associations failing to meet the qualified thrift lender test are generally allowed only to engage in activities permitted for both national banks and savings associations.

The FHLB also relies on the qualified thrift lender test. A savings association will only enjoy full borrowing privileges from an FHLB if the savings association is a qualified thrift lender. As of December 31, 2003, the Bank was in compliance with its qualified thrift lender test requirement and met the definition of a domestic building and loan association.

Page 13 Navigation Links

#### Affiliate Transactions

The Bank is subject to certain restrictions imposed by federal law on any extensions of credit to, or the issuance of a guarantee or letter of credit on behalf of, any affiliates, the purchase of, or investments in, stock or other securities thereof, the taking of such securities as collateral for loans, and the purchase of assets of any affiliates. Such restrictions prevent any affiliates from borrowing from us unless the loans are secured by marketable obligations of designated amounts. Further, such secured loans and investments by us to or in any affiliate are limited, individually, to 10% of the Bank s capital and surplus (as defined by federal regulations), and such secured loans and investments are limited, in the aggregate, to 20% of the Bank s capital and surplus. Some entities included in the definition of an affiliate are parent companies, sister banks, sponsored and advised companies, investment companies whereby the bank its affiliate serves as investment advisor, and financial subsidiaries of the Bank. Additional restrictions on transactions with affiliates may be imposed on us under the prompt corrective action provisions of federal law. See Prompt Corrective Action on page 12.

#### Capital Distribution Limitations

A savings association that is a subsidiary of a savings and loan holding company, such as the Bank, must file an application or a notice with the OTS at least 30 days before making a capital distribution. Savings associations are not required to file an application for permission to make a capital distribution and need only file a notice if the following conditions are met:

- they are eligible for expedited treatment under OTS regulations;
- they would remain adequately capitalized after the distribution;
- the annual amount of capital distribution does not exceed net income for that year to date added to retained net income for the two preceding years; and
- the capital distribution would not violate any agreements between the OTS and the savings association or any OTS regulations.

Any other situation would require an application to the OTS. The OTS may disapprove an application or notice if the proposed capital distribution would:

- $\bullet \ \ \text{make the savings association under capitalized}, \ \text{significantly under capitalized} \ \ \text{or critically under capitalized}; \\$
- raise safety or soundness concerns; or
- violate a statute, regulation or agreement with the OTS (or with the FDIC), or a condition imposed in an OTS approved application or notice.

#### **Privacy**

Federal banking regulations limit the ability of banks and other financial institutions to disclose non-public information about consumers to nonaffiliated third parties. Pursuant to those rules, financial institutions must provide:

- initial notices to customers about their privacy policies, describing the conditions under which they may disclose nonpublic personal information to nonaffiliated third parties and affiliates;
- annual notices of their privacy policies to current customers; and
- a reasonable method for customers to "opt out" of disclosures to nonaffiliated third parties.

These privacy provisions affect how consumer information is transmitted through diversified financial companies and conveyed to outside vendors.

#### Interagency Guidance on Response Programs to Protect Against Identity Theft

On August 12, 2003, the Federal bank and thrift regulatory agencies requested public comment on proposed guidance that would require financial institutions to develop programs to respond to incidents of unauthorized access to customer information, including procedures for notifying customers under certain circumstances. The proposed guidance:

• interprets previously issued interagency customer information security guidelines that require financial institutions to implement information security programs designed to protect their customers information; and

describes the components of a response program and sets a standard for providing notice to customers affected by
unauthorized access to or use of customer information that could result in substantial harm or inconvenience to those
customers, thereby reducing the risk of losses due to fraud or identity theft.

#### USA Patriot Act of 2001

The USA Patriot Act and its implementing regulations significantly expanded anti-money laundering and financial transparency laws, including:

- due diligence requirements for financial institutions that administer, maintain, or manage private bank accounts or correspondent accounts for non-US persons;
- standards for verifying customer identification at account opening and maintaining expanded records;
- rules to promote cooperation among financial institutions, regulators, and law enforcement entities in identifying parties that may be involved in terrorism or money laundering:
- the filing of reports by non-financial businesses filed with the Treasury Department s Financial Crimes Enforcement Network for cash transactions exceeding \$10,000; and
- the filing of suspicious activities reports by securities brokers and dealers if they believe a customer may be violating U.S. laws and regulations.

#### Activities of Subsidiaries

A savings association seeking to establish a new subsidiary, acquire control of an existing company or conduct a new activity through a subsidiary must provide 30 days prior notice to the FDIC and the OTS and conduct any activities of the subsidiary in compliance with regulations and orders of the OTS. The OTS may require a savings association to divest any subsidiary or terminate any activity conducted by a subsidiary that the OTS determines to pose a serious threat to the financial safety, soundness or stability of the savings association or to be otherwise inconsistent with sound banking practices.

### Community Reinvestment Act and the Fair Lending Laws

Savings associations have a responsibility under the Community Reinvestment Act and related OTS regulations to help meet the credit needs of their communities, including low- and moderate-income neighborhoods. In addition, the Equal Credit Opportunity Act and the Fair Housing Act prohibit lenders from discriminating in their lending practices on the basis of characteristics specified in those statutes. An institution s failure to comply with the provisions of the Community Reinvestment Act could, at a minimum, result in regulatory restrictions on its activities and the denial of applications. In addition, an institution s failure to comply with the Equal Credit Opportunity Act and the Fair Housing Act could result in the OTS, other federal regulatory agencies as well as the Department of Justice taking enforcement actions.

#### Federal Home Loan Bank System

The Bank is a member of the FHLB system. Among other benefits, each FHLB serves as a reserve or central bank for its members within its assigned region. Each FHLB is financed primarily from the sale of consolidated obligations of the FHLB system. Each FHLB makes available loans or advances to its members in compliance with the policies and procedures established by the Board of Directors of the individual FHLB.

As an FHLB member, the Bank is required to own capital stock in an FHLB in an amount equal to the greater of:

- 1% of its aggregate outstanding principal amount of its residential mortgage loans, home purchase contracts and similar obligations at the beginning of each calendar year; or
- 5% of its FHLB advances or borrowings.

At December 31, 2003, the Bank had \$123 million of FHLB stock, an amount in excess of our required investment of \$106 million.

A new capital plan of the FHLB of San Francisco was approved by the Federal Housing Finance Board and will be implemented on April 1, 2004. The new capital plan incorporates a single class of stock with a par value of \$100 per share, and may be issued, exchanged, redeemed, and repurchased only at par value. Each member is

Page 15 <u>Navigation Links</u>

required to own stock in amount equal to the greater of:

- a membership stock requirement with an initial cap of \$25 million (100% of "membership asset value" as defined), or
- an activity based stock requirement (based on percentage of outstanding advances).

The new capital stock is redeemable on five years written notice, subject to certain conditions.

We do not believe that the initial implementation of the FHLB of San Francisco new capital plan as approved will have a material impact upon our financial condition, cash flows, or results of operations. Based on December 31, 2003 data, the required investment in FHLB stock under the new plan would be \$100 million, which we exceed and we could be required to sell the excess to the FHLB San Francisco at their discretion. In addition, the Bank could be required to purchase as much as 50% additional capital stock or sell as much as 50% of its proposed capital stock requirement at the discretion of the FHLB of San Francisco.

#### Federal Reserve System

The Federal Reserve requires all depository institutions to maintain non-interest-bearing reserves at specified levels against their transaction accounts and non-personal time deposits. These transaction accounts include checking, NOW and Super NOW checking accounts. These reserves may also be used to satisfy the OTS s liquidity requirements. At December 31, 2003, the Bank was in compliance with these requirements.

#### **Proposed Legislation**

From time to time, new laws are proposed that could have an effect on the financial institutions industry. For example, legislation is currently being considered in the U.S. House of Representatives Financial Institutions Subcommittee which would:

- merge the Bank Insurance Fund ("BIF") and the SAIF;
- increase the current deposit insurance coverage limit for insured deposits to \$130,000 and index future coverage limits to inflation:
- increase deposit insurance coverage limits for municipal deposits;
- double deposit insurance coverage limits for individual retirement accounts; and
- smooth out bank deposit insurance premiums to avoid sharp increases during times of recession.

While we cannot predict whether such proposals will eventually become law, they could have an effect on our operations and the way we conduct business.

#### **Regulation of DSL Service Company**

DSL Service Company is licensed as a real estate broker under the California Real Estate Law and as a contractor with the Contractors State License Board. Thus, the real estate investment activities of DSL Service Company, including development, construction and property management activities relating to its portfolio of projects, are governed by a variety of laws and regulations. Changes occur frequently in the laws and regulations or their interpretation by agencies and the courts. DSL Service Company must comply with various federal, state and local laws, ordinances, rules and regulations concerning zoning, building design, construction, hazardous waste and similar matters. Environmental laws and regulations also affect the operations of DSL Service Company, including regulations pertaining to availability of water, municipal sewage treatment capacity, land use, protection of endangered species, population density and preservation of the natural terrain and coastlines. These and other requirements could become more restrictive in the future, resulting in additional time and expense in connection with DSL Service Company s real estate activities.

With regard to environmental matters, the construction products industry is regulated by federal, state and local laws and regulations pertaining to several areas including human health and safety and environmental compliance. The Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986, as well as analogous laws in some states, create joint and several liability for the cost of cleaning up or correcting releases to the environment of designated hazardous substances. Among those who may be held jointly and severally liable are:

• those who generated the waste;

- those who arranged for disposal;
- those who owned or operated the disposal site or facility at the time of disposal; and
- current owners.

In general, this liability is imposed in a series of governmental proceedings initiated by the government s identification of a site for initial listing as a "Superfund site" on the National Priorities List or a similar state list and the government s identification of potentially responsible parties who may be liable for cleanup costs. None of the DSL Service Company s project sites is listed as a "Superfund site."

In addition, California courts have imposed warranty-like responsibility upon developers of new housing for defects in structure and the housing site, including soil conditions. This responsibility is not necessarily dependent upon a finding that the developer was negligent.

As a licensed entity, DSL Service Company is also examined and supervised by the California Department of Real Estate and the Contractors State License Board.

#### **TAXATION**

#### **Federal**

Savings institutions are taxed like other corporations for federal income tax purposes, and are required to comply with income tax statutes and regulations similar to those applicable to large commercial banks. The Bank s bad debt deduction is determined under the specific charge-off method, which allows the Bank to take an income tax deduction for loans determined to be wholly or partially worthless.

In addition to the regular income tax, corporations are also subject to an alternative minimum tax. This tax is computed at 20% of the corporation s regular taxable income, after taking certain adjustments into account. The alternative minimum tax applies to the extent that it exceeds the regular income tax liability.

A corporation that incurs alternative minimum tax generally is entitled to take this tax as a credit against its regular tax liability in later years to the extent that the regular tax liability in these later years exceeds the alternative minimum tax.

#### **State**

The Bank uses California s financial corporation income tax rate to compute its California franchise tax liability. This rate is higher than the California non-financial corporation income tax rate because the financial corporation rate reflects an amount "in lieu" of local personal property and business license taxes that are paid by non-financial corporations, but not by banks or other financial corporations. The financial corporation income tax rate was 10.84% for both 2003 and 2002.

The Bank files a California franchise tax return on a combined reporting basis. Other income and franchise tax returns are filed on a separate-entity basis in various other states. The Bank anticipates that additional state income and franchise tax returns will be required in future years as its lending business expands nationwide.

The Internal Revenue Service and various state taxing authorities have examined the Bank stax returns for all tax years through 1997. Management believes it has adequately provided for potential exposure to issues that may be raised by tax auditors in the years subsequent to 1997, which remain open to review.

#### **FACTORS THAT MAY AFFECT FUTURE RESULTS OF OPERATIONS**

In addition to the other information contained in this report, the following risks may affect us. If any of these risks occur, our business, financial condition or operating results could be adversely affected.

#### Our California business focus and economic conditions in California could adversely affect our operations.

Downey is headquartered in and its operations are concentrated in California. As a result of this geographic concentration, our results depend largely upon economic and business conditions in this state.

Page 17 <u>Navigation Links</u>

Deterioration of economic conditions in California could have a material adverse impact on the quality of our loan and real estate portfolios and the demand for our products and services.

#### Significant changes in interest rates could adversely affect our performance and results of operations.

If interest rates vary substantially from present levels, our results may differ materially from recent levels. Changes in interest rates will influence the growth of loans, investments, deposits and borrowings and affect the rates received on loans and investment securities and paid on deposits and borrowings. Changes in interest rates also affect the value of our recorded mortgage servicing rights on loans we service for others, generally increasing in value as interest rates rise and declining as interest rates fall. If interest rates were to increase significantly, the economic feasibility of real estate investment activities also could be adversely affected.

We are subject to government regulation and federal monetary policy that could limit or restrict our activities, which could adversely affect our operations.

The financial services industry is subject to extensive federal and state supervision and regulation. Significant new laws or changes in, or repeals of, existing laws may cause our results to differ materially. Further, federal monetary policy, particularly as implemented through the Federal Reserve System, significantly affects credit conditions for Downey, primarily through open market operations in United States government securities, the discount rate for borrowings and reserve requirements. A material change in these conditions would be likely to have a material impact on our results.

#### Competition may adversely affect our performance.

The banking and financial services business in our market areas is highly competitive. The increasingly competitive environment is a result primarily of changes in regulation, changes in technology and product delivery systems, and the expectation of continued consolidation among financial services providers. Increasing levels of competition in the banking and financial services businesses may reduce our market share or cause the prices we charge for our products to decline. Our results may differ in future periods depending on the nature or level of competition.

If a significant number of borrowers, guarantors and related parties fail to perform as required by the terms of their loans, we will sustain losses.

A significant source of risk arises from the possibility that losses will be sustained because borrowers, guarantors and related parties may fail to perform in accordance with the terms of their loans. While we have adopted underwriting and loan quality monitoring systems, procedures and credit policies, including the establishment and review of the allowance for loan losses, such policies and procedures may not prevent unexpected losses that could materially affect our results.

Because Downey operates as a holding company, changes in the ability of the Bank to pay dividends may adversely affect Downey s ability to pay dividends.

Although we have been paying regular quarterly dividends, our ability to pay dividends to our stockholders depends to a large extent upon the dividends we receive from the Bank. Dividends paid by the Bank are subject to restrictions under various federal and state banking laws. In addition, the Bank must maintain certain capital levels, which may restrict the ability of the Bank to pay dividends to us. The Bank s regulators have the authority to prohibit the Bank or us from engaging in unsafe or unsound practices in conducting our business. As a consequence, the Bank regulators could deem the payment of dividends by the Bank to be an unsafe or unsound practice, depending on the Bank s financial condition or otherwise, and prohibit such payments. If the Bank were unable to pay dividends to us, we might cease paying or reduce the rate or frequency at which we pay dividends to stockholders until such time that the Bank could again pay us dividends.

### **ITEM 2. PROPERTIES**

#### **BRANCHES**

The corporate offices of Downey, the Bank and DSL Service Company are owned by the Bank and located at 3501 Jamboree Road, Newport Beach, California 92660. Part of that corporate facility houses a branch office of the Bank. Certain departments (warehousing, record retention, etc.) are located in other owned and leased facilities in Orange County, California. The majority of our administrative operations, however, are located in our corporate headquarters.

At December 31, 2003, we had 172 branches. We owned the building and land occupied by 61 of our branches, we owned one branch building on leased land and we had one branch under construction. We operate branches in 110 locations (including 100 in-store locations) with leases or licenses expiring at various dates through August 2011, with options to extend the term.

The net book value of our owned branches, including the one on leased land, totaled \$81 million at December 31, 2003, and the net book value of our leased branch offices totaled \$3 million at December 31, 2003. The net book value of our furniture and fixtures, including electronic data processing equipment, was \$26 million at December 31, 2003.

For additional information regarding our offices and equipment, see Note 1 on page 72 and Note 8 on page 87 of Notes to Consolidated Financial Statements.

#### **ELECTRONIC DATA PROCESSING**

We utilize a mainframe computer system and use various internally developed and third-party vendors software for retail deposit operations, loan servicing, accounting and loan origination functions, including our operations conducted over the Internet. The net book value of our electronic data processing equipment, including personal computers and software, was \$13 million at December 31, 2003.

#### **ITEM 3. LEGAL PROCEEDINGS**

We have been named as a defendant in legal actions arising in the ordinary course of business, none of which, in the opinion of management, is material.

### ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

No matters were submitted to stockholders during the fourth guarter of 2003.

Page 19	Navigation Links

### **PART II**

### ITEM 5. MARKET FOR REGISTRANT S COMMON EQUITY AND RELATED STOCKHOLDER MATTERS

Our common stock is traded on the New York Stock Exchange ("NYSE") and the Pacific Exchange ("PCX") under the trading symbol "DSL." At February 29, 2004, we had approximately 699 stockholders of record (not including the number of persons or entities holding stock in nominee or street name through various brokerage firms) and 27,953,747 outstanding shares of common stock.

The following table sets forth for the quarters indicated the range of high and low sale prices per share of our common stock as reported on the NYSE Composite Tape.

	2003				2002			
	4th Quarter	3rd Quarter	2nd Quarter	1st Quarter	4th Quarter	3rd Quarter	2nd Quarter	1st Quarter
High	\$50.15	\$48.68	\$45.25	\$41.41	\$41.55	\$49.25	\$55.56	\$48.83
Low	45.50	40.19	40.15	37.59	31.32	33.34	46.70	41.84
End of period	49.30	46.73	41.30	39.41	39.00	34.25	47.30	45.60

During 2003 and 2002, we paid quarterly cash dividends of \$0.09 per share, or \$0.36 per share annually. Total cash dividends were \$10.1 million in both 2003 and 2002. On February 26, 2004, we paid a \$0.10 per share quarterly cash dividend, representing an increase of 11.1% and aggregating \$2.8 million.

We may pay additional dividends out of funds legally available therefor at such times as the Board of Directors determines that dividend payments are appropriate. The Board of Directors policy is to consider the declaration of dividends on a quarterly basis.

The payment of dividends by the Bank to Downey is subject to OTS regulations. For further information regarding these regulations, see Capital Distribution Limitations on page 14.

On July 24, 2002, our Board of Directors authorized a share repurchase program of up to \$50 million of our common stock. To fund this program, the Bank paid a special \$50 million dividend to the holding company. The shares are being repurchased from time-to-time in open market transactions. The timing, volume and price of purchases will be made at our discretion, and will also be contingent upon our overall financial condition, as well as market conditions in general. Since July 25, 2002, 306,300 shares of our common stock have been repurchased at an aggregate cost of \$39.73 per share. No shares were reissued during the year, leaving \$38 million available for future purchases.

There were no shares repurchased during 2003. Common stock repurchases were as follows:

	Number of Shares	Average Price	Available Repurchases	
Authorized a share repurchase program July 24, 2002	-	\$ -	\$ 50,000,000	
August 2002	212,300	41.04	41,287,128	
November 2002	94,000	36.78	37,829,808	
Balance at December 31, 2003	306,300	\$ 39.73	\$ 37,829,808

# ITEM 7. MANAGEMENT S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Certain statements under this caption may constitute "forward-looking statements" under the Private Securities Litigation Reform Act of 1995, which involve risks and uncertainties. Forward-looking statements do not relate strictly to historical information or current facts. Some forward-looking statements may be identified by use of terms such as "expects," "anticipates," "intends," "plans," "believes," "seeks," "estimates," or words of similar meaning, or future or conditional verbs such as "will," "would," "should," "could" or "may." Our actual results may differ significantly from the results discussed in such forward-looking statements. Factors that might cause such a difference include, but are not limited to, economic conditions, competition in the geographic and business areas in which we conduct our operations, fluctuations in interest rates, credit quality and government regulation. We do not undertake to update forward-looking statements to reflect the impact of circumstances or events that arise after the date the forward-looking statements were made. For additional information concerning these factors, see Factors That May Affect Future Results Of Operations on page 17.

#### **OVERVIEW**

Our net income for 2003 totaled \$101.7 million or \$3.64 per share on a diluted basis, down from last year s \$112.3 million or \$3.99 per share.

The decline in our net income between years primarily reflected the following:

- a \$26.4 million decline in net interest income reflecting a decline in the effective interest rate spread;
- a \$21.4 million increase in general and administrative expense due to higher costs associated with the increased number of branch locations and higher loan origination activity; and
- a \$10.4 million loss from trading securities that were sold in July and were intended to enhance net interest income and serve as a partial economic hedge against mortgage servicing rights.

Those unfavorable items were partially offset by the following:

- a \$15.6 million increase in net gains on sales of loans due to both a higher volume of loan sales and a higher gain per dollar of loan sold;
- a \$12.6 million improvement in loan servicing activities due primarily to a smaller addition to the valuation allowance for mortgage servicing rights;
- a \$5.9 million increase in loan and deposit related fees;
- a \$4.7 million improvement in provision for loan losses; and
- a \$2.9 million litigation award.

For 2003, our return on average assets was 0.89% and our return on average equity was 11.65%. These compare to our 2002 returns of 1.00% on average assets and 14.42% on average equity.

Our single family loan originations, including purchases, increased from \$10.7 billion in 2002 to a record \$10.9 billion in 2003, of which \$6.2 billion were originated for sale in the secondary market. Of the 2003 total, \$4.7 billion represented originations of loans for portfolio, of which \$318 million were subprime credits. In addition to single family loans, we originated \$377 million of other loans during the year, including \$100 million of construction and land loans.

Our assets declined \$336 million or 2.8% during 2003 to \$11.6 billion at year end, following a 7.9% increase during 2002. The decline was primarily in loans held for investment, as the low interest rate environment throughout 2003 resulted in our loan repayments exceeding our portfolio originations. Deposits declined \$945 million or 10.2% to a year-end level of \$8.3 billion, following a 7.2% increase during 2002. Since deposits declined more than assets, our borrowings increased \$505 million during 2003 to \$2.3 billion at year end.

Page 23

**Navigation Links** 

Non-performing assets totaled \$49 million at December 31, 2003, down from \$80 million a year ago. The decrease was due primarily to a decline in our residential non-performers. When measured as a percentage of total assets, our non-performing assets dropped to 0.42% at year-end 2003 from 0.67% at year-end 2002.

At December 31, 2003, the Bank exceeded all regulatory capital tests, with capital-to-asset ratios of 7.96% for both tangible and core capital and 15.55% for risk-based capital. These capital levels are significantly above the "well capitalized" standards defined by the federal banking regulators of 5% for core and tangible capital and 10% for risk-based capital. For further information, see Insurance of Deposit Accounts on page 11, Investments in Real Estate and Joint Ventures on page 40 and Regulatory Capital Compliance on page 62.

On October 11, 2003, grocery store workers from Albertsons, Vons, Pavilions and Ralphs went on strike or were locked out by grocery store management. The grocery stores have remained open during the labor dispute. Downey operates 85 full-service, in-store branches with 85 automated teller machines ("ATMs") and 142 stand-alone ATMs in these grocery stores. At December 31, 2003, we had \$1.2 billion in deposits or 15% of total deposits associated with these branches. There has been no material change to deposit volumes and the impact to our financial results has been minimal.

#### **Critical Accounting Policies**

We have established various accounting policies which govern the application of accounting principles generally accepted in the United States of America in the preparation of our financial statements. Our significant accounting policies are described in Note 1 of Notes to the Consolidated Financial Statements beginning on page 72. Certain accounting policies require us to make significant estimates and assumptions which have a material impact on the carrying value of certain assets and liabilities, and we consider these to be critical accounting policies. The estimates and assumptions we use are based on historical experience and other factors, which we believe to be reasonable under the circumstances. Actual results could differ significantly from these estimates and assumptions which could have a material impact on the carrying value of assets and liabilities at the balance sheet dates and our results of operations for the reporting periods. Management has discussed the development and selection of these critical accounting policies with the Audit Committee of our Board of Directors.

We believe the following are critical accounting policies that require the most significant estimates and assumptions, which are particularly susceptible to significant change in the preparation of our financial statements:

- Allowance for mortgage servicing rights ("MSRs") losses. MSRs are reviewed for impairment based on their fair value. The fair value of the MSRs, for the purposes of impairment, is measured using a discounted cash flow analysis based on available market quotes, market-adjusted discount rates and anticipated prepayment speeds. Market sources are used to determine prepayment speeds, the net cost of servicing per loan, inflation rate, and default and interest rates for mortgages. We capitalize and measure MSR impairment on a disaggregated basis based on the following predominant risk characteristics of the underlying mortgage loans: fixed-rate mortgage loans by loan term and coupon rate (less than 7%, 150 basis point increments between 7% and 10%, and greater than 10%), and loan term for adjustable rate mortgages. Impairment losses are recognized through a valuation allowance for each impaired stratum, with any associated provision recorded as a component of loan servicing income (loss). At December 31, 2003, the allowance totaled \$13 million, compared to the prior year-end allowance of \$33 million. For further information, see Note 1 on page 72 and Note 11 on page 88 of Notes to the Consolidated Financial Statements.
- Valuation of expected interest rate lock commitments. We enter into commitments to make loans that we intend to sell to investors whereby the interest rate on the loan is set prior to funding. These interest rate lock commitments are considered to be derivatives and are recorded at fair value. This value is calculated using market sources, adjusted by an anticipated fallout factor for interest rate lock commitments that are not expected to fund. At December 31, 2003, an asset was recorded for interest rate lock derivatives of \$0.1 million, compared to the prior year-end asset balance of \$5.4 million. For further information, see Interest Rate Lock Derivatives on page 63 and Note 1 on page 72 and Note 22 on page 100 of Notes to the Consolidated Financial Statements.
- Allowance for losses on loans and real estate. The allowance for losses on loans and real estate are maintained at an amount management deems adequate to cover inherent losses. We have implemented and use an internal asset review system and loan loss allowance methodology designed to provide for the detection of problem assets and an adequate allowance to cover loan losses. In determining the allowance for loan losses related to specific large loans (loans over \$5 million), we evaluate the allowance on an individual loan basis, including an analysis of the creditworthiness, cash flows and financial status of the borrower, and the condition and the estimated value of the collateral. Generally, we review all loans under \$5 million by analyzing their performance and composition of their collateral as a whole because of the relatively homogeneous nature of the portfolios, unless an individual loan or borrower relationship warrants separate analysis. The allowance is determined by applying factors that take into consideration past loss experience and asset duration for each major asset type to the associated asset balance or loss statistics against current classified asset balances to determine the amount of the allowances. At December 31, 2003, these allowances totaled \$32 million, compared to the prior year-end allowances of \$36 million. For further information, see Allowance for Losses on Loans and Real Estate on page 54 and Note 1 of Notes to the Consolidated Financial Statements on page 72.

#### **RESULTS OF OPERATIONS**

#### **Net Interest Income**

Net interest income is the difference between the interest and dividends earned on loans, mortgage-backed securities and investment securities ("interest-earning assets") and the interest paid on deposits and borrowings ("interest-bearing liabilities"). The spread between the yield on interest-earning assets and the cost of interest-bearing liabilities and the relative dollar amounts of these assets and liabilities principally affects net interest income.

Our net interest income totaled \$288.6 million in 2003, down \$26.4 million or 8.4% from 2002 and \$16.6 million or 5.4% lower than 2001. The decline during 2003 reflected a lower effective interest rate spread, as our average interest-earning assets increased by \$222 million or 2.1% to \$11.1 billion. Our effective interest rate spread averaged 2.61% in 2003, down from 2.91%, the average for both 2002 and 2001. The decline in 2003 was due to our yield on interest-earning assets declining more rapidly than our cost of funds. The more rapid decline primarily reflected our positive interest rate gap (i.e., more interest-earning assets reprice to market interest rates within one year than do interest-bearing liabilities). In addition, the decline in our effective interest rate spread also reflected a higher proportion of lower yielding investment securities, a higher proportion of adjustable rate mortgages tied to the 12-month moving average of annual yields on actively traded U.S. Treasury securities to a constant maturity of one year ("MTA") that currently have lower fully-indexed yields than those tied to the FHLB Eleventh District Cost of Funds Index ("COFI") and a lower percentage of higher yielding subprime loans.

The following table presents for the years indicated the total dollar amount of:

- interest income from average interest-earning assets and the resultant yields; and
- interest expense on average interest-bearing liabilities and the resultant costs, expressed as rates.

The table also sets forth our net interest income, interest rate spread and effective interest rate spread. The effective interest rate spread reflects the relative level of interest-earning assets to interest-bearing liabilities and equals:

- the difference between interest income on interest-earning assets and interest expense on interest-bearing liabilities, divided by
- average interest-earning assets for the year.

The table also sets forth our net interest-earning balance the difference between the average balance of interest-earning assets and the average balance of total deposits and borrowings for the years indicated. We included non-accrual loans in the average interest-earning assets balance. We included interest from non-accrual loans in interest income only to the extent we received payments and to the extent we believe we will recover the remaining principal balance of the loans. We computed average balances for the year using the average of each month is daily average balance during the years indicated.

Page 27 Navigation Links

Changes in our net interest income are a function of changes in both rates and volumes of interest-earning assets and interest-bearing liabilities. The following table sets forth information regarding changes in our interest income and expense for the years indicated. For each category of interest-earning assets and interest-bearing liabilities, we have provided information on changes attributable to:

- changes in volume changes in volume multiplied by comparative period rate;
- changes in rate changes in rate multiplied by comparative period volume; and
- changes in rate/volume changes in rate multiplied by changes in volume.

Interest-earning asset and interest-bearing liability balances used in the calculations represent annual average balances computed using the average of each month s daily average balance during the years indicated.

#### **Provision for Loan Losses**

During 2003, \$3.7 million of provision for loan losses was reversed, compared to an expense of \$0.9 million in 2002 and \$2.6 million in 2001. The current year reversal reflected both an improvement in our credit quality and a decline in our loan portfolio.

For further information, see Allowance for Losses on Loans and Real Estate on page 54.

#### **Other Income**

Our total other income was \$90.9 million in 2003, up from \$67.1 million in 2002 and \$68.9 million in 2001. The \$23.9 million increase from 2002 primarily reflected:

- a \$15.6 million increase from gains on sales of loans;
- a \$12.6 million improvement in loan servicing activities;
- a \$ 5.9 million increase in loan and deposit related fees; and
- a \$2.9 million litigation award, related to an other real estate owned asset that suffered damage from earth movement.

Page 28	Navigation Links
---------	------------------

Those favorable items were partially offset by a \$10.4 million loss from trading securities and a \$1.6 million decline in our other income category.

Total other income declined \$1.9 million during 2002 due primarily to a \$28.3 million higher loss from our loan servicing activities. That unfavorable item was partially offset by increases of \$23.4 million in net gains on sales of loans and mortgage-backed securities and \$6.4 million in income from real estate held for investment.

Below is a further discussion of the major other income categories.

#### Loan and Deposit Related Fees

Loan and deposit related fees totaled \$53.1 million in 2003, up \$5.9 million from 2002 and \$2.6 million higher than 2001. Our deposit related fees increased \$3.9 million during 2003, primarily due to higher fees from our checking accounts, while our loan related fees increased \$2.0 million.

The following table presents a breakdown of loan and deposit related fees during the years indicated.

(In Thousands)	2003	2002	2001	
Loan related fees:				
Prepayment fees	\$ 16,780	\$ 15,999	\$ 23,839	
Other fees	10,479	9,258	8,764	
Deposit related fees:				
Automated teller machine fees	8,925	7,328	6,524	
Other fees	16,892	14,635	11,359	
Total loan and deposit related fees	\$ 53,076	\$ 47,220	\$ 50,486	

### Real Estate and Joint Ventures Held for Investment

Income from our real estate and joint ventures held for investment totaled \$9.8 million in 2003, \$0.4 million below 2002, but \$6.0 million higher than 2001. The current year decline was primarily attributed to a \$1.0 million unfavorable change in provision for losses on real estate and joint ventures and a \$0.9 million decline in net rental operations due to fewer properties owned. Those unfavorable items were partially offset by a \$0.8 million increase in gains from sales to \$7.2 million (a \$2.1 million increase in gains from sales of wholly owned real estate more than offset a \$1.3 million decline in gains related to joint venture projects reported within equity in net income from joint ventures) and a \$0.4 million increase in interest from joint ventures.

The table below sets forth the key components comprising our income from real estate and joint venture operations during the years indicated.

(In Thousands)	2003	2002	2001

Rental operations, net of expenses	\$ 1,213	\$	2,102	\$ 2,245		
Net gains on sales of wholly owned real estate	3,317		1,200	129		
Equity in net income from joint ventures	4,379		5,476	736		
Interest from joint venture advances	1,454		1,024	468		
(Provision for) reduction of losses on real estate and joint ventures	(528)		448	307		
Total income from real estate and joint ventures held for investment, net	\$ 9,835	\$ 1	10,250	\$ 3,885		

For additional information, see Investments in Real Estate and Joint Ventures on page 40, Allowance for Losses on Loans and Real Estate on page 54 and Note 6 of Notes to Consolidated Financial Statements on page 84.

#### Secondary Marketing Activities

A loss of \$27.1 million was recorded in loan servicing from our portfolio of loans serviced for others during 2003, which was \$12.6 million below the 2002 loss but \$15.7 million higher than the loss in 2001. In each of the three years, the fair value of our mortgage servicing rights declined due to the drop in long-term interest rates that resulted in an increase in the actual and projected rate loans we service for others prepay, thereby shortening their expected average life. Those declines in the fair value required us to record a provision for impairment in each year. However, the addition in 2003 of \$11.9 million was \$24.7 million below the addition made in 2002 and was

Page 29	Navigation Links
---------	------------------

primarily responsible for the lower loss from our servicing activities. Also contributing to the improvement in 2003 was a \$4.7 million increase in net cash servicing fees due to the growth in the servicing portfolio. Those positive factors were partially offset by increases of \$10.3 million in the amortization of mortgage servicing rights and \$6.5 million in payoff and curtailment interest cost, both of which were adversely impacted by high prepayments. When a loan we service for others prepays, most of our loan servicing agreements require us to pay interest to the investor up to the date we remit funds to them. That additional interest cost is what we call payoff and curtailment interest cost. However, we benefit from the use of those proceeds from the time of repayment until we are required to remit the funds to the investor. That benefit results in a reduction of our borrowing costs within net interest income.

At December 31, 2003, we serviced \$9.3 billion of loans for others, compared to \$8.3 billion at December 31, 2002 and \$5.8 billion at December 31, 2001.

The following table presents a breakdown of the components of our loan servicing loss for the years indicated.

(In Thousands)	2003	2002	2001	
Net cash servicing fees	\$ 21,215	\$ 16,536	\$ 11,702	
Payoff and curtailment interest cost (a)	(11,611)	(5,117)	(2,674)	
Amortization of MSRs	(24,774)	(14,435)	(9,813)	
Provision for impairment of MSRs	(11,890)	(36,613)	(10,588)	
Total loan servicing loss, net	\$ (27,060)	\$ (39,629)	\$ (11,373)	

<sup>(</sup>a) Represents contractual obligation to pay interest at the investor s rate from the date the loan is repaid until the funds are remitted to the investor. This does not include the benefit of the use of repaid loan funds to reduce borrowings and its associated interest expense, which is reported in net interest income.

Sales of loans and mortgage-backed securities we originated increased in 2003 to a record \$6.6 billion from \$6.0 billion in 2002 and \$4.6 billion in 2001. Net gains associated with these sales totaled \$61.4 million in 2003, up from \$45.8 million in 2002 and \$22.4 million in 2001. Included in the current year was a \$0.9 million loss associated with the SFAS 133 impact of valuing derivatives associated with the sale of loans, compared to \$6.1 million of income in 2002 and a loss of \$6.0 million in 2001. Excluding the SFAS 133 impact, a gain of \$62.4 million or 0.95% of loans sold was realized, up from 0.66% in 2002 and 0.62% in 2001. The higher gain as a percentage of loans sold in 2003 reflected improved pricing in the secondary markets which is unlikely to continue as borrower demand for fixed rate loans declines and competition for the lower volume intensifies. Net gains included capitalized mortgage servicing rights of \$61.1 million in 2003, compared to \$53.2 million in 2002 and \$44.4 million in 2001.

The following table presents a breakdown of the components of our net gains (losses) on sales of loans and mortgage-backed securities for the years indicated.

(In Thousands)	2003	200	2	2001		
Mortgage servicing rights	\$ 61,110	\$ 53,2	36 \$	44,391		
All other components excluding SFAS 133 (a)	1,264	(13,4	•	(15,995)		
SFAS 133	(938)	6,0	98	(5,964)		
Total net gains on sales of loans and mortgage-backed securities	\$ 61,436	\$ 45,8	50 \$	22,432		
Secondary marketing gain excluding SFAS 133 as a percentage of						
associated sales	0.95 %	0.0	66 %	0.62 %		

<sup>(</sup>a) Included a \$0.3 million gain in 2002 associated with the treasury operation s sale of \$1.0 billion of mortgage-backed securities.

For additional information concerning mortgage servicing rights, see Note 11 of Notes to Consolidated Financial Statements on page 88.

#### **Trading Securities**

In May 2003, the Federal Reserve announced a change in their bias towards economic weakness and the potential for further declines in market interest rates. Following that announcement, we purchased trading securities to enhance net interest income and to also serve as a partial economic hedge against further declines in the value of our mortgage servicing rights. The initial purchase of trading securities was approximately \$230

million. When long-term interest rates began to rise in July 2003, the trading securities were sold and we have not made any further purchases. We incurred a loss from the trading securities totaling \$10.4 million. That loss was offset by an increase during the same period in the value of our mortgage servicing rights that resulted in a recapture of previously provided provisions to the associated valuation allowance.

#### **Operating Expense**

Our operating expense totaled \$207.1 million in 2003, up from \$186.7 million in 2002 and \$163.2 million in 2001. The current year increase was due to higher general and administrative expense, which increased by \$21.4 million or 11.4%. That increase was primarily due to higher costs associated with an increased number of branch locations and higher loan origination activity.

The following table presents a breakdown of key components comprising operating expense during the years indicated.

(In Thousands)	2003	2002	2001	
----------------	------	------	------	--

Salaries and related costs	\$ 134,610	\$ 119,514	\$ 99,935	
Premises and equipment costs	32,261	30,694	26,016	
Advertising expense	3,712	4,418	4,410	
SAIF insurance premiums and regulatory assessments	3,205	3,078	3,051	
Professional fees	2,383	1,435	5,452	
Other general and administrative expense	31,828	27,505	23,632	
Total general and administrative expense	207,999	186,644	162,496	
Net operation of real estate acquired in settlement of loans	(929)	11	239	
Amortization of excess cost over fair value of branch acquisitions (a)	-	-	457	
Total operating expense	\$ 207,070	\$ 186,655	\$ 163,192	

<sup>(</sup>a) During the fourth quarter of 2002, Downey adopted SFAS 147, which required us to cease the amortization of goodwill as of January 1, 2002 and to subject this asset to annual impairment testing.

#### **Provision for Income Taxes**

Our effective tax rate was 42.3% for 2003, unchanged from 2002 and 2001. See Note 1 on page 72 and Note 18 on page 94 of Notes to the Consolidated Financial Statements for a further discussion of income taxes and an explanation of the factors which impact our effective tax rate.

#### **Business Segment Reporting**

The previous discussion and analysis of the Results of Operations pertained to our consolidated results. This section discusses and analyzes the results of operations of our two business segments banking and real estate investment. For a description of these business segments and the accounting policies used, see Business on page 1 and Note 1 on page 72 and Note 24 on page 106 of Notes to Consolidated Financial Statements.

The following table presents by business segment our net income for the years indicated.

(In Thousands)	2003	2002	2001	
Banking net income Real estate investment net income	\$ 95,459 6,282	\$ 106,074 6,219	\$ 119,454 727	
Total net income	\$ 101,741	\$ 112,293	\$ 120,181	
		,	,	

Page 31	Navigation Links

### Banking

Net income from our banking operations totaled \$95.5 million in 2003, down from \$106.1 million in 2002 and \$119.5 million in 2001. The current year decline was primarily due to the following:

- a \$26.2 million decline in net interest income reflecting a decline in the effective interest rate spread;
- a \$20.3 million increase in operating expense due to higher costs associated with the increased number of branch locations and higher loan origination activity; and
- a \$10.4 million loss from trading securities that were sold in July and were intended to enhance net interest income and serve as a partial economic hedge against mortgage servicing rights.

Those unfavorable items were partially offset by the following:

- a \$15.6 million increase in net gains on sales of loans due to both a higher volume of sales and a higher gain per dollar of loan sold:
- a \$12.6 million improvement in loan servicing activities due primarily to a smaller addition to the valuation allowance for mortgage servicing rights;
- a \$5.2 million increase in loan and deposit related fees;
- a \$4.7 million improvement in provision for loan losses; and
- a \$2.9 million litigation award.

During 2002, net income from our banking operations declined \$13.4 million. The decrease was primarily due to a \$28.3 million higher loss from loan servicing activities, a \$26.3 million increase in operating expense and a \$7.3 million decline in loan related fees. These unfavorable items were partially offset by a \$23.4 million increase in net gains on sales of loans and mortgage-backed securities, a \$9.8 million increase in net interest income, a \$4.1 million increase in deposit related fees and a \$1.6 million decline in provision for loan losses.

The table below sets forth banking operational results and selected financial data for the years indicated.

#### Real Estate Investment

Net income from our real estate investment operations totaled \$6.3 million in 2003, virtually unchanged from 2002 and up from \$0.7 million in 2001. Higher gains from sales and interest from joint ventures in 2003 were essentially offset by an unfavorable change in provision for losses on real estate and joint ventures and lower net rental income.

During 2002, net income from our real estate investment operations increased \$5.5 million primarily due to higher gains from sales and lower operating expenses, as 2001 included expense pertaining to litigation matters associated with certain joint venture partners.

The table below sets forth real estate investment operational results and selected financial data for the years indicated.

### **FINANCIAL CONDITION**

#### Loans and Mortgage-Backed Securities

Total loans and mortgage-backed securities, including those we hold for sale, declined \$580 million or 5.3% from year-end 2002 to a total of \$10.4 billion or 89.3% of assets at December 31, 2003. The decline occurred in both loans held for sale and loans held for investment. Loans held for sale declined \$372 million as the volume of new single family fixed rate applications fell due to the rise in mortgage interest rates beginning in the third quarter of 2003, while loans held for investment declined \$206 million as

repayments exceeded originations. Our prepayment speed during 2003 was 51%, compared to 39% during 2002 and 37% during 2001.

Our loan originations, including loans purchased, totaled a record \$11.3 billion in 2003, up from \$10.9 billion in 2002 and \$8.2 billion in 2001. This current year increase primarily reflects record originations of one-to-four unit residential loans of \$10.9 billion, of which approximately \$4.7 billion or 43% were for portfolio, with the balance for sale in the secondary market. Our origination of subprime loans totaled \$318 million in 2003, down from \$520 million in 2002. Refinancing activities related to residential one-to-four unit loans, including new loans to refinance existing loans which we or other lenders originated, constituted 83% of originations during 2003 compared to 78% during 2002 and 75% during 2001. Refinancing activities increased from \$8.3 billion in 2002 to \$9.1 billion in 2003, as a lower interest rate environment existed throughout most of the year.

We originate one-to-four unit residential adjustable rate mortgages both with and without loan origination fees. In adjustable rate mortgage transactions for which we charge no origination fees, we receive a larger interest margin over the rate index to which the loan pricing is tied than in those for which we charge fees. In addition, a prepayment fee on these loans is generally required if prepaid within the first three years. This trend towards loans with no origination fees has generally resulted in deferrable loan origination costs exceeding loan origination fees.

The table below presents information regarding interest rates and loan origination costs, net of fees collected on loans originated during the years indicated.

(Dollars in Thousands)	2003	2002	2001	2000	1999	
Average interest rate on new loans	4.43 %	5.43 %	6.18 %	6.10 %	5.92 %	
Total loan origination costs (net of fees) and premiums						
(net of discounts) deferred during the year <sup>(a)</sup>	\$ 96,115	\$ 75,420	\$ 36,497	\$ 34,797	\$ 53,181	

<sup>(</sup>a) The change in the amount of net deferred loan costs in each year primarily reflects changes in the volume of new loan originations.

Originations of adjustable rate residential one-to-four unit loans for portfolio, including loans purchased, totaled \$4.6 billion in 2003, up from \$4.4 billion in 2002 and \$3.2 billion in 2001. Of the 2003 total:

- 62% were monthly adjustable loans tied to either the COFI or MTA index and provide for negative amortization. During 2003, there was greater borrower preference for monthly adjustable loans tied to MTA, as those loans had a lower fully-indexed rate than did those tied to COFI. MTA-related monthly adjustable loans represented 63% of monthly adjustable originations, compared to only 29% in 2002.
- 29% were adjustable rate loans where the initial rate is fixed for the first three or five years. At the conclusion of the initial fixed rate period, those loans then adjust to the change in either the weekly average on one-year U.S. Treasury securities adjusted to a constant maturity ("CMT"), or the London Inter-Bank Offered Rate ("LIBOR").

<sup>(</sup>a) Primarily fixed rate residential one-to-four unit loans.

At December 31, 2003, \$7.0 billion of our one-to-four unit adjustable rate mortgages were subject to negative amortization, of which \$48 million represented the amount of negative amortization included in the loan balance. The amount of negative amortization declined \$64 million during 2003 as loans were repaid or as borrowers repaid previously capitalized interest due to loans becoming fully amortizing. For further information, see Residential Real Estate Lending on page 3.

The following table sets forth our investment portfolio of residential one-to-four unit adjustable rate loans by index, excluding our adjustable fixed for 3-5 year loans which are still in their initial fixed rate period, at the dates indicated.

(a) Excludes residential one-to-four unit adjustable fixed for 3-5 year loans still in their initial fixed rate period.

Origination of loans secured by multi-family properties, including loans purchased, totaled \$85 million in 2003, up from \$3 million in 2002 and less than \$1 million in 2001. Our origination of commercial real estate loans, including loans purchased, totaled \$4 million in 2003, compared to \$1 million in 2002 and \$7 million in 2001.

During 2003, we originated \$80 million of construction loans, principally for entry level and first time move-up residential tracts. This compares to \$124 million in 2002 and \$102 million in 2001. Our origination of land development loans totaled \$20 million in 2003, compared to \$56 million in 2002 and \$16 million in 2001.

Origination of non-mortgage commercial loans totaled \$3 million in 2003, down from \$14 million in 2002 and \$18 million in 2001. A substantial majority of these originations represented secured loans.

Origination of automobile loans totaled less than \$1 million in 2003, the same as in 2002 but below the \$5 million in 2001.

During 2002, we purchased \$1.0 billion of 30-year fixed rate mortgage-backed securities due to a net interest spread of over 3% given the steepness in the yield curve. These securities were sold in the fourth quarter

> Page 35 **Navigation Links**

of 2002 due to interest rate volatility and the potential adverse impact market interest rate changes could have on the carrying value of the investment. Approximately \$1.0 million was earned on the securities while owned.

At December 31, 2003, our unfunded loan application pipeline totaled \$1.7 billion. Within that pipeline, we had commitments to borrowers for short-term interest rate locks, not including expected fallout, of \$740 million, of which \$211 million were related to residential one-to-four unit loans being originated for sale in the secondary market. Furthermore, we had commitments for undrawn lines of credit of \$185 million and loans in process of \$55 million. We believe our current sources of funds will enable us to meet these obligations.

We carry loans for sale at the lower of cost or fair value. At December 31, 2003, no valuation allowance was required as the fair value exceeded book value on an aggregate basis.

At December 31, 2003, our residential one-to-four units subprime portfolio consisted of approximately 91% "A-" credit, 8% "B" credit and 1% "C" credit loans. The average loan-to-value ratio at origination for these loans was approximately 73%.

Page 38 <u>Navigation Links</u>

We carry mortgage-backed securities available for sale at fair value which, at December 31, 2003, reflected an unrealized gain of \$7,000. The 2003 year-end unrealized gain, less the associated tax effect, is reflected as a separate component in stockholders equity as accumulated other comprehensive income (loss) until realized.

The table below sets forth the scheduled contractual maturities, including principal amortization, of our loan and mortgage-backed securities portfolio at December 31, 2003.

<sup>(</sup>a) Included home equity loans, which are interest only, with balances due at the end of the term. All or part of the outstanding balances may be paid off at any time during the term without penalty.

At December 31, 2003, the maximum amount the Bank could have loaned to any one borrower, and related entities, under regulatory limits was \$147 million, or \$245 million for loans secured by readily marketable collateral, compared to \$135 million or \$225 million for loans secured by readily marketable collateral at year-end 2002. We do not expect that these regulatory limitations will adversely impact our proposed lending activities during 2004.

#### **Investment Securities**

#### Investments in Real Estate and Joint Ventures

DSL Service Company participates as an owner of, or a partner in, a variety of real estate development projects, principally retail neighborhood shopping centers and residential developments, most of which are located in California. For additional information regarding these real estate investments, see Note 6 of Notes to the Consolidated Financial Statements on page 84. We have substantially completed and leased most of the neighborhood shopping center projects with a weighted average occupancy rate of 84% at December 31, 2003. At December 31, 2003, the Bank had no loan commitments to the joint ventures.

DSL Service Company is entitled to interest on its equity invested in its joint venture projects on a priority basis after third-party debt and shares profits and losses with the developer partner, generally on an equal basis. DSL Service Company has obtained guarantees from the principals of the developer partners. Partnership equity or deficit accounts are affected by current period results of operations, additional partner advances, partnership distributions and partnership liquidations. We have analyzed our variable interests in these joint venture projects and we have determined based on the dispersal of risks among the parties involved that we are not the primary beneficiary of any of these variable interest entities. Therefore, the joint venture projects are not consolidated into our financial results, but rather are accounted for under the equity method.

As of December 31, 2003, DSL Service Company was involved with one joint venture partner. This partner was the operator of two residential housing development projects. DSL Service Company had five wholly owned retail neighborhood shopping centers located in California and Arizona.

Our investment in real estate and joint ventures amounted to \$36 million at December 31, 2003, compared to \$34 million at December 31, 2002 and \$38 million at December 31, 2001. The increase during 2003 was primarily attributed to a \$6 million investment in existing shopping centers, a \$5 million investment in a new joint venture and our share of joint venture profits of \$3 million. Those increases were partially offset by a \$7 million return of capital from one of our existing joint ventures and the sale of wholly owned projects with a carrying value of \$5 million. During 2002, we sold wholly owned projects with a carrying value of \$22 million. That decline was partially offset by a \$17 million investment in a residential joint venture and a \$1 million investment in a shopping center development.

Page 40 <u>Navigation Links</u>

The following table sets forth the condensed balance sheet of DSL Service Company s residential joint ventures at December 31, 2003, on a historical cost basis.

(Dollars in Thousands)

Net investment in real estate projects	\$ 1,012	\$ 16,284	\$ 188	\$ 17,484	
Number of projects	4	5	3	12	

<sup>(</sup>b) The aggregate other partners equity of \$5 million represents their equity interest in the accumulated retained earnings of the respective joint ventures. Those results include the net profit on sales and the operating results of the real estate assets, net of depreciation and funding costs. Except for any secured financing which has been obtained, DSL Service Company has provided all other financing. As part of our internal asset review process, we compare the fair value of the joint venture real estate assets to the secured notes payable to the Bank and DSL Service Company s equity investment. To the extent the fair value of the real estate assets is less than the aggregate of those amounts, we make a provision to create a valuation allowance. No valuation allowance was required at December 31, 2003.

(a) Included five free-standing stores that are part of neighborhood shopping centers totaling less than \$1 million, which we counted as one project.

Real estate investments entail risks similar to those our construction and commercial lending activities present. In addition, California courts have imposed warranty-like responsibility upon developers of new housing for defects in structure and the housing site, including soil conditions. This responsibility is not necessarily dependent upon a finding that the developer was negligent. Owners of real property also may incur liabilities with respect to environmental matters, including financial responsibility for clean-up of hazardous waste or other conditions, under various federal and state laws.

Page 41 <u>Navigation Links</u>

### **Deposits**

Our deposits declined \$945 million or 10.2% in 2003 and totaled \$8.3 billion at December 31, 2003. Compared to the year-ago period, our certificates of deposit declined \$1.4 billion or 31.0%, which was partially offset by an increase of \$501 million or 11.0% in our lower-rate transaction accounts i.e., checking, money market and regular passbook. Depositors continued to be more interested in liquidity given the relatively low level of interest rates, and moved monies from certificates of deposit to transaction accounts, primarily regular passbook accounts. When interest rates rise, we would expect the reverse to occur. At December 31, 2003, the average deposit size of our 72 traditional branches was \$97 million, while the average deposit size of our 100 in-store branches was \$13 million.

The following table sets forth information concerning our deposits and weighted average rates paid at the dates indicated.

### **Borrowings**

At December 31, 2003, borrowings totaled \$2.3 billion, up from \$1.7 billion at year-end 2002 and \$1.6 billion at year-end 2001. The increase during 2003 occurred primarily in advances from the FHLB.

The following table sets forth information concerning our FHLB advances and other borrowings at the dates indicated.

December 31,

(Dollars in Thousands)	2003	2002	2001	2000	1999

<sup>(</sup>a) Includes Junior subordinated debentures of \$124 million that may be redeemed, in whole or in part, beginning in July of 2004 and real estate notes of \$4 million.

Our junior subordinated debentures with a principal amount of \$124 million are payable by Downey Financial Corp. to Downey Financial Capital Trust I ("Trust"), a wholly owned special purpose entity. The debentures carry an interest rate of 10.00% and are due September 15, 2029. We may redeem, in whole or in part, the junior subordinated debentures before their maturity at a redemption price of 100% of their principal

Page 43	Navigation Links

amount plus accrued and unpaid interest on or after July 23, 2004. For further information regarding the junior subordinated debentures and the associated capital securities (formerly consolidated), see Note 17 of Notes to the Consolidated Financial Statements on page 93.

### **Off-Balance Sheet Arrangements**

We consolidate majority-owned subsidiaries that we control. We account for other affiliates, including joint ventures, in which we do not exhibit significant control or have majority ownership, by the equity method of accounting. For those relationships in which we own less than 20%, we generally carry them at cost. In the course of our business, we participate in real estate joint ventures through our wholly-owned subsidiary, DSL Service Company. Our real estate joint ventures do not require consolidation as a result of applying the provisions of the recently issued Financial Accounting Standards Board Interpretation 46 (revised December 2003). For further information regarding this interpretation, see Newly Adopted Accounting Principles on page 62. For further information regarding our real estate joint venture partnerships, see Note 6 of Notes to the Consolidated Financial Statements on page 84.

We enter into derivative financial instruments as part of our interest rate risk management process, primarily related to our sale of loans in the secondary market. The associated fair value changes to the notional amount of the derivative instrument are recorded on-balance sheet. For further information regarding our derivative instruments, see Asset/Liability Management and Market Risk on page 45, Contractual Obligations and Other Commitments on page 60 and Note 22 of Notes to the Consolidated Financial Statements on page 100.

We also utilize financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of our customers. These financial instruments include commitments to originate fixed and variable rate mortgage loans held for investment, undisbursed loan funds, lines of credit and letters of credit, and commitments to purchase loans and mortgage-backed securities for our portfolio. The contract or notional amounts of these instruments reflect the extent of involvement we have in particular classes of financial instruments. For further information regarding these commitments, see Asset/Liability Management and Market Risk on page 45, Contractual Obligations and Other Commitments on page 60 and Note 22 of Notes to the Consolidated Financial Statements on page 100.

We use the same credit policies in making commitments to originate or purchase loans, lines of credit and letters of credit as we do for on-balance sheet instruments. For commitments to originate loans held for investment, the contract amounts represent exposure to loss from market fluctuations as well as credit loss. In regard to these commitments, adverse changes from market fluctuations are generally not hedged. We control the credit risk of our commitments to originate loans held for investment through credit approvals, limits and monitoring procedures.

We do not dispose of troubled loans or problem assets by means of unconsolidated special purpose entities.

### **Transactions with Related Parties**

There are no related party transactions required to be disclosed in accordance with FASB Statement No. 57, Related Party Disclosures. Loans to our executive officers and directors were made in the ordinary course of business and were made on substantially the same terms as comparable transactions.

	Page 44	<u>Navigation Links</u>
- Asset/Liability Management and Market Risk		

Market risk is the risk of loss from adverse changes in market prices and interest rates. Our market risk arises primarily from interest rate risk in our lending and deposit taking activities. This interest rate risk primarily occurs to the degree that our interest-bearing liabilities reprice or mature on a different basis generally more rapidly than our interest-earning assets. Since our earnings depend primarily on our net interest income, which is the difference between the interest and dividends earned on interest-earning assets and the interest paid on interest-bearing liabilities, our principal objectives are to actively monitor and manage the effects of adverse changes in interest rates on net interest income while maintaining asset quality. Our primary strategy to manage interest rate risk is to emphasize the origination of adjustable rate mortgages or loans with relatively short maturities. Interest rates on adjustable rate mortgages are primarily tied to COFI, MTA, LIBOR and CMT.

In addition to the interest rate risk associated with our lending and deposit taking activities, we also have market risk associated with our secondary marketing activities. Changes in mortgage interest rates, primarily fixed rate mortgages, impact the fair value of loans held for sale as well as our interest rate lock commitment derivatives, where we have committed to an interest rate with a potential borrower for a loan we intend to sell. Our objective is to hedge against fluctuations in interest rates through use of forward sale and purchase contracts with government-sponsored enterprises and whole loan sale contracts with various parties. These contracts are typically obtained at the time the interest rate lock commitments are made. Therefore, as interest rates fluctuate, the changes in the fair value of our interest rate lock commitments and loans held for sale tend to be offset by changes in the fair value of the hedge contracts. The method used for assessing the effectiveness of a hedging derivative, as well as the measurement approach for determining the ineffective aspects of the hedge, is established at the inception of the hedge. Although we continue to hedge as previously done, SFAS 133, as applied to our risk management strategies, may increase or decrease reported net income and stockholders—equity, depending on levels of interest rates and other variables affecting the fair values of derivative instruments and hedged items, but will have no effect on the overall economics of the transactions. We generally do not enter into hedging contracts for speculative purposes.

Changes in mortgage interest rates also impact the value of our mortgage servicing rights. Rising interest rates typically result in slower prepayment speeds on the loans being serviced for others which increase the value of mortgage servicing rights. Declining interest rates typically result in faster prepayment speeds which decrease the value of mortgage servicing rights. Generally, we have not hedged our mortgage servicing rights. However, in light of the Federal Reserve s change in bias towards weakness and the potential for further declines in market interest rates, we purchased during the second quarter of 2003 10-year U.S. Treasury securities as a partial economic hedge against the value of our mortgage servicing rights. These securities were classified in a trading account and were carried at fair value, with any changes in fair value reflected in earnings. This partial economic hedge was closed in July of 2003 as interest rates began to rise.

Our Asset/Liability Management Committee is responsible for implementing the interest rate risk management policy which sets forth limits established by the Board of Directors of acceptable changes in net interest income and net portfolio value from specified changes in interest rates. The OTS defines net portfolio value as the present value of expected net cash flows from existing assets minus the present value of expected net cash flows from existing liabilities plus the present value of expected cash flows from existing off-balance sheet contracts. Our Asset/Liability Management Committee reviews, among other items, economic conditions, the interest rate outlook, the demand for loans, the availability of deposits and borrowings, and our current operating results, liquidity, capital and interest rate exposure. In addition, our Asset/Liability Management Committee monitors asset and liability maturities and repricing characteristics on a regular basis and performs various simulations and other analyses to determine the potential impact of various business strategies in controlling interest rate risk and the potential impact of those strategies upon future earnings under various interest rate scenarios. Based on these reviews, our Asset/Liability Management Committee formulates a strategy that is intended to implement the objectives set forth in our business plan without exceeding the net interest income and net portfolio value limits set forth in our interest rate risk policy.

Page 45	Navigation Links
i ago io	<u></u>

One measure of our exposure to differential changes in interest rates between assets and liabilities is shown in the following table which sets forth the repricing frequency of our major asset and liability categories as of December 31, 2003, as well as other information regarding the repricing and maturity differences between our interest-earning assets and total deposits and borrowings in future periods. We refer to these differences as "gap." We have determined the repricing frequencies by reference to projected

maturities, based upon contractual maturities as adjusted for scheduled repayments and "repricing mechanisms" provisions for changes in the interest and dividend rates of assets and liabilities. We assume prepayment rates on substantially all of our loan portfolio based upon our historical loan prepayment experience and anticipated future prepayments. Repricing mechanisms on a number of our assets are subject to limitations, such as caps on the amount that interest rates and payments on our loans may adjust, and accordingly, these assets do not normally respond to changes in market interest rates as completely or rapidly as our liabilities. The interest rate sensitivity of our assets and liabilities illustrated in the following table would vary substantially if we used different assumptions or if actual experience differed from the assumptions set forth.

<sup>(</sup>d) Subject to immediate repricing.

<sup>(</sup>e) Based upon contractual maturity and repricing date.

Page 46 Navigation Links

Our six-month gap at December 31, 2003 was a positive 14.95%. This means that more interest-earning assets mature or reprice within six months than total deposits and borrowings. This compares to a positive six-month gap of 16.80% at December 31, 2002 and 12.01% at December 31, 2001. We originated and purchased for investment approximately \$5.0 billion during 2003, \$4.7 billion during 2002 and \$3.4 billion during 2001 of loans and mortgage-backed securities with adjustable interest rates or maturities of five years or less. These loans represented approximately 99% during 2003, 2002 and 2001 of all loans and mortgage-backed securities originated and purchased for investment during these periods.

At December 31, 2003 and 2002, essentially all of our interest-earning assets mature, reprice or are estimated to prepay within five years, compared to 99% at December 31, 2001. At December 31, 2003, \$10.0 billion or 99% of our loans held for investment and mortgage-backed securities portfolios consisted of adjustable rate loans and loans with a due date of five years or less, compared to \$10.1 billion or 98% at December 31, 2002 and \$9.3 billion or 96% at December 31, 2001. During 2004, we will continue to offer residential fixed rate loan products to our customers to meet customer demand. We primarily originate fixed rate loans for sale in the secondary market and price them accordingly to create loan servicing income and to increase opportunities for originating adjustable rate mortgages. However, we may originate fixed rate loans for investment when funded with long-term funds to mitigate interest rate risk and small volumes to facilitate the sale of real estate acquired through foreclosure or that meet required yield and other approved guidelines. For further information, see Secondary Marketing and Loan Servicing Activities on page 5.

We are better protected against rising interest rates with a positive six-month gap. However, we remain subject to possible interest rate spread compression, which would adversely impact our net interest income if interest rates rise. This is primarily due to the lag in repricing of the indices to which our adjustable rate loans and mortgage-backed securities are tied, as well as the repricing frequencies and periodic interest rate caps on these adjustable rate loans and mortgage-backed securities. The amount of such interest rate spread compression would depend upon the frequency and severity of such interest rate fluctuations.

In addition to measuring interest rate risk via a gap analysis, we establish limits on, and measure the sensitivity of, our net interest income and net portfolio value to changes in interest rates. Changes in interest rates are defined as instantaneous and sustained movements in interest rates in 100 basis point increments. We utilize an internally maintained asset/liability management simulation model to make the calculations which, for net portfolio value, are calculated on a discounted cash flow basis. First, we estimate our net interest income for the next twelve months and the current net portfolio value assuming no change in interest rates from those at period end. Once the base case has been estimated, we make calculations for each of the defined changes in interest rates, to include any associated differences in the anticipated prepayment speed of loans. We then compare those results against the base case to determine the estimated change to net interest income and net portfolio value due to the changes in interest rates. The following are the estimated impacts to net interest income and net portfolio value from various instantaneous, parallel shifts in interest rates based upon our asset and liability structure as of year-ends 2003 and 2002. Since we base these estimates upon numerous assumptions, like the expected maturities of our interest-bearing assets and liabilities and the shape of the period-end interest rate yield curve, our actual sensitivity to interest rate changes could vary significantly if actual experience differs from those assumptions used in making the calculations.

The following table shows our financial instruments that are sensitive to changes in interest rates, categorized by expected maturity, and the instruments fair values at December 31, 2003. This data differs from that in the gap table as it does not incorporate the repricing characteristics of assets and liabilities. Rather, it only reflects contractual maturities adjusted for anticipated prepayments. Market risk sensitive instruments are generally defined as on and off balance sheet derivatives and other financial instruments. Our assets and liabilities that do not have a stated maturity date, such as certain deposits, are considered to be long term in nature and are reported in the "thereafter" column. We do not consider these financial instruments to be materially sensitive to interest rate fluctuations, and historically, the balances have remained fairly constant over various economic conditions. The weighted average interest rates for the various fixed-rate and variable-rate assets and liabilities presented are based on the actual rates that existed at December 31, 2003. The fair value of our financial instruments is determined as follows:

- Fed funds and FHLB Stock equal their book values due to their short-term repricing characteristics.
- Investment securities and mortgage-backed securities are based on the closing market price quotations from financial market monitoring firms.
- Loans held for sale are based on bid quotations from financial market monitoring firms.
- Loans held for investment takes into consideration discounted cash flows through the estimated maturity or repricing dates using estimated market discount rates.
- Demand deposits, money market and savings accounts are equal to their book values.
- Time deposits and borrowings are based on the discounted value of contractual cash flows, which is estimated using wholesale borrowing rates offered for similar terms.
- Junior subordinated debentures are based upon the closing stock price of the associated capital securities published in financial information services or newspapers and may be called at our option beginning in July of 2004.

The degree of market risk inherent in loans with prepayment features may not be completely reflected in the disclosures. Although we have taken into consideration our historical prepayment trends adjusted for current market conditions to determine expected maturity categories, prepayment features are triggered by changes in the market rates of interest. Unexpected changes may increase the rate of prepayments above those anticipated. As such, the potential loss from such market rate changes may be significantly larger.

<sup>(</sup>a) Expected maturities are contractual maturities adjusted for prepayments of principal. We use a number of assumptions to estimate fair values and expected maturities. For assets, we base expected maturities upon contractual maturity, projected repayments and prepayments of principal. The prepayment experience reflected herein is based on our historical experience adjusted for current market conditions. Our average projected constant prepayment rate ("CPR") is 49.5% on our fixed-rate and 27.9% on our adjustable rate mortgage portfolio for interest-earning assets, excluding investment securities which are not subject to prepayment except for call provisions, if any. For deposits, in accordance with standard industry practice and our own historical experience, we have applied "decay factors," used to estimate deposit runoff, of 20.0% per year. The actual maturities of these instruments could vary substantially if future prepayments differ from our historical experience.

<sup>(</sup>b) Included FHLB stock and Investment in Downey Financial Capital Trust I.

<sup>(</sup>c) Included capitalized basis adjustment reflecting the change in fair value of the rate lock derivative from the date of commitment to the date of funding.

<sup>(</sup>d) At December 31, 2003, the carrying value reflected the change in fair value of the rate lock derivative from the date of commitment to the date of funding. The estimated fair value also includes the initial value at rate lock of \$0.6 million and the value of mortgage servicing rights of \$1.6 million not to be recognized in the financial statements until the expected loans are sold.

<sup>(</sup>e) The estimated fair value included mortgage servicing rights acquired prior to January 1, 1996 when we began capitalizing the asset.

<sup>(</sup>f) Included amounts swept into money market deposit accounts.

<sup>(</sup>a) Excludes adjustments for non-accrual loans, and amortization of net deferred costs to originate loans, premiums and discounts.

The weighted average yield on our loan portfolio declined to 4.61% at December 31, 2003, from 5.83% at December 31, 2002. The weighted average rate on new loans originated during 2003 was 4.43%, compared to 5.43% during 2002 and 6.18% during 2001. At December 31, 2003, our adjustable rate mortgage portfolio of single family residential loans, including mortgage-backed securities, totaled \$9.8 billion with a weighted average rate of 4.55%, compared to \$9.9 billion with a weighted average rate of 5.75% at December 31, 2002 and \$9.0 billion with a weighted average rate of 7.11% at December 31, 2001.

#### **Problem Loans and Real Estate**

### Non-Performing Assets

Non-performing assets consist of loans on which we have ceased accruing interest (which we refer to as non-accrual loans), loans restructured at a below market rate, real estate acquired in settlement of loans and repossessed automobiles. Our non-performing assets totaled \$49 million at December 31, 2003, down from \$80 million at December 31, 2002 and \$93 million at December 31, 2001. The decrease in our non-performing assets during 2003 was primarily attributed to declines in our residential one-to-four unit subprime category of \$17 million and prime category of \$14 million. Of the total, real estate acquired in settlement of loans represented \$6 million at December 31, 2003, down from \$12 million at December 31, 2002 and \$15 million at December 31, 2001. Our non-performing assets as a percentage of total assets was 0.42% at year-end 2003, down from 0.67% at year-end 2002 and 0.83% at year-end 2001.

Page 50

<sup>(</sup>a) Represented one residential one-to-four unit loan.

It is our policy to take appropriate, timely and aggressive action when necessary to resolve non-performing assets. When resolving problem loans, it is our policy to determine collectibility under various circumstances which are intended to result in our maximum financial benefit. We accomplish this by either working with the borrower to bring the loan current or by foreclosing and selling the asset. We perform ongoing reviews of loans that display weaknesses and maintain adequate loss allowances on the loans. For a discussion on our internal asset review policy, refer to Allowance for Losses on Loans and Real Estate on page 54.

At December 31, 2003, \$13 million of our non-performing assets were located outside of California, compared to \$23 million outside of California a year ago.

We evaluate the need for appraisals of non-performing assets on a periodic basis. We will generally obtain a new appraisal when we believe that there may have been an adverse change in the property operations or in the economic conditions of the geographic market of the property securing our loans. Our policy is to obtain new appraisals at least annually for all real estate acquired in settlement of loans.

#### Non-Accrual Loans

It is our general policy to account for a loan as non-accrual when the loan becomes 90 days delinquent or when collection of interest appears doubtful. In a number of cases, loans may remain on accrual status past 90 days when we determine that continued accrual is warranted because the loan is well-secured and in process of collection. As of December 31, 2003, we had no loans 90 days or more delinquent which remained on accrual status. We reverse and charge against interest income any interest previously accrued with respect to non-accrual loans. We recognize interest income on non-accrual loans to the extent that we receive payments and to the extent that we believe we will recover the remaining principal balance of the loan. We restore these loans to an accrual status only if all past due payments are made by the borrower and the borrower has demonstrated the ability to make future payments of principal and interest. At December 31, 2003, non-accrual loans aggregating \$13 million were less than 90 days delinquent relative to their contractual terms.

### Troubled Debt Restructurings

We consider a restructuring of a debt a troubled debt restructuring when we, for economic or legal reasons related to the borrower s financial difficulties, grant a concession to the borrower that we would not otherwise grant. Troubled debt restructurings may include changing repayment terms, reducing the stated interest rate or reducing the amounts of principal and/or interest due or extending the maturity date. The restructuring of a loan is intended to recover as much of our investment as possible and to achieve the highest yield possible. At December 31, 2003, we had no troubled debt restructurings.

### Real Estate Acquired in Settlement of Loans

Real estate acquired in settlement of loans consists of real estate acquired through foreclosure or deeds in lieu of foreclosure and totaled \$6 million at December 31, 2003.

Page 51	Navigation Links

When a borrower fails to make required payments on a loan and does not cure the delinquency within 60 days, we normally record a notice of default to commence foreclosure proceedings, so long as we have given any required prior notice to the borrower. If the loan is not reinstated within the time permitted by law for reinstatement, which is normally five business days prior to the date set for the non-judicial trustee s sale, we may then sell the property at a foreclosure sale. In general, if we have elected to pursue a non-judicial foreclosure, we are not permitted under applicable law to obtain a deficiency judgment against the borrower, even if the security property is insufficient to cover the balance owed. At these foreclosure sales, we generally acquire title to the property.

At December 31, 2003, loans delinquent 30 days or more as a percentage of total loans was 0.59%, down from 0.86% at year-end 2002 and 1.10% at year-end 2001. The decrease from the prior year occurred in all of our delinquent categories, most notably within our residential one-to-four unit categories. As a percentage of its loan category, residential one-to-four units decreased from 0.59% at year-end 2002 to 0.48% at year-end 2003, while subprime residential one-to-four units decreased from 2.80% at year-end 2002 to 1.84% at year-end 2003. A higher incidence of delinquency is expected on subprime loans as these borrowers have a history of delinquencies for which we charge higher interest rates to compensate for that risk. In addition, the loan-to-value ratio on these loans is generally lower thereby providing more equity protection against loss.

#### Allowance for Losses on Loans and Real Estate

We maintain a valuation allowance for losses on loans and real estate to provide for losses inherent in those portfolios. Management evaluates the adequacy of the allowance quarterly to maintain the allowance at levels sufficient to provide for inherent losses. A key component to our evaluation is our internal asset review process.

Our Internal Asset Review Department conducts independent reviews to evaluate the risk and quality of all our assets. Our Internal Asset Review Committee is responsible for the review and classification of assets. The Internal Asset Review Committee members include the Chief Internal Asset Review Officer, President and Chief Executive Officer, Chief Financial Officer, Chief Administrative Officer, Chief Lending Officer, General Counsel and Director of Compliance/Risk Management. The Internal Asset Review Committee meets quarterly to review and to determine asset classifications and to recommend any changes to asset valuation allowances. With the exception of payoffs or asset sales, the classification of an asset, once established, can be removed or upgraded only upon approval of the Internal Asset Review Committee or the Chief Internal Asset Review Officer as delegated by the Committee. The Chief Internal Asset Review Officer reports quarterly to the Audit Committee of the Board of Directors regarding overall asset quality, the adequacy of valuation allowances on classified assets and our adherence to policies and procedures regarding asset classification and valuation.

We use an internal asset review system and loss allowance methodology designed to provide for timely recognition of problem assets and adequate general valuation allowances to cover asset losses. Our current asset monitoring process includes the use of asset classifications to segregate the assets, largely loans and real estate, into various risk categories. We use the various asset classifications as a means of measuring risk for determining the valuation allowance at a point in time. We currently use a six grade system to classify our assets. The current grades are:

- pass:
- watch;
- special mention;
- substandard;
- doubtful; and
- loss.

We consider substandard, doubtful and loss assets "classified assets" for regulatory purposes. A brief description of these classifications follows:

- The pass classification represents a level of credit quality which contains no well-defined deficiency or weakness.
- The watch classification identifies an asset that currently contains no well-defined deficiency or weakness, but warrants close monitoring e.g., loans to facilitate the sale of real estate acquired in settlement of loans. This category may also be used for assets upgraded from lower classifications where continuing monitoring is deemed appropriate.
- A special mention asset does not currently expose us to a sufficient degree of risk to warrant an adverse classification, but does possess a correctable deficiency or potential weakness deserving management s close attention.
- Substandard assets have a well-defined weakness or weaknesses. They are characterized by the distinct possibility that we will sustain some loss if the deficiencies are not corrected.
- An asset classified doubtful has all the weaknesses inherent in those classified substandard with the added characteristic
  that the weaknesses make collection or liquidation in full highly questionable and improbable on the basis of currently
  existing facts, conditions and values. We consider doubtful to be a temporary classification until resolution of pending
  weakness issues enables us to more clearly define the potential for loss.

Page 54

**Navigation Links** 

• That portion of an asset classified as loss is considered uncollectible and of so little value that its continuance as an asset, without establishment of a specific valuation allowance, is not warranted. A loss classification does not mean that an asset has absolutely no recovery or salvage value, but rather it is not reasonable to defer writing off or providing for all or a portion of the asset even though partial recovery may occur. We will generally classify as loss the balance of the asset that is greater than the net fair value of the asset unless we can expect payment from another source. Therefore, the amount of an asset classified as loss reflects the total of specific valuation allowances established for the particular asset. Specific valuation allowances are not includable in determining the Bank's total regulatory capital.

The OTS has the authority to require us to change our asset classifications. If the change results in an asset being classified in whole or in part as loss, a specific allowance must be established against the amount so classified or that amount must be charged off. OTS guidelines set forth quantitative benchmarks as a starting point for the determination of appropriate levels of general valuation allowances. The OTS directs its examiners to rely on management s estimates of adequate general valuation allowances if the Bank s process for determining adequate allowances is deemed to be sound.

The allowances for losses on loans and real estate are maintained at an amount management deems adequate to cover inherent losses. We have implemented and use an internal asset review system and loan loss allowance methodology designed to provide for the detection of problem assets and an adequate allowance to cover loan losses. In determining the allowance for loan losses related to specific large loans (loans over \$5 million), we evaluate the allowance on an individual loan basis, including an analysis of the creditworthiness, cash flows and financial status of the borrower, and the condition and the estimated value of the collateral. Generally, we review all loans under \$5 million by analyzing their performance and composition of their collateral as a whole because of the relatively homogeneous nature of the portfolios, unless an individual loan or borrower relationship warrants separate analysis. Given the above evaluations, the amount of the allowance is based upon the total of general valuation allowances, allocated allowances and an unallocated allowance.

We utilize the asset classifications from our internal asset review process in the following manner to determine the amount of our allowances:

- General valuation allowances: This element relates to assets with no well-defined deficiency or weakness (i.e., assets classified pass or watch) and takes into consideration loss that is imbedded within the portfolio but has not yet been realized. Generally, we believe that borrowers are impacted by events well in advance of a lender s knowledge that may ultimately result in loan default and eventual loss. Examples of such loss-causing events would be job loss, divorce or medical crisis in the case of single family residential and consumer loans, or loss of a major tenant in the case of commercial real estate loans. We determine general valuation allowances by applying factors that take into consideration past loss experience and asset duration for each major asset type to the associated asset balance.
- Allocated allowances: This element relates to assets with well-defined deficiencies or weaknesses (i.e., assets classified special mention, substandard, doubtful or loss). We calculate losses on an ongoing basis by credit classification for each major asset type. Factors based upon those loss statistics are applied against current classified asset balances to determine the amount of allocated allowances. Included in these allowances are those amounts associated with assets where it is probable that the value of the asset has been impaired and the loss can be reasonably estimated. If we determine our carrying value of the asset exceeds the net fair value and no alternative payment source exists, then we record a specific allowance for the amount of that difference.
- Unallocated allowance: This element is more subjective and is reviewed quarterly to take into consideration estimation
  errors and economic trends that are not necessarily captured in determining the general valuation and allocated
  allowances.

Page 55

**Navigation Links** 

During 2003, we reversed \$3.7 million of provision for loan losses, compared to an expense of \$0.9 million in 2002. The current year reversal reflected both an improvement in our credit quality and a decline in our loan portfolio. Our net loan charge-offs and the reversal of provision for loan losses resulted in a decline of \$4.7 million in our allowance for loan losses to \$30.3 million at December 31, 2003. The decline in our allowance primarily reflected a decline of \$3.2 million in general valuation allowances to \$23.6 million. Allocated allowances declined by \$1.5 million, primarily in our single-family portfolio. There was no change in our unallocated allowance of \$2.8 million.

During 2002, our provision for loan losses was \$0.9 million, down \$1.6 million from 2001. Our net loan charge-offs exceeded the provision for loan losses by \$1.1 million resulting in a decline in our allowance for loan losses to \$35.0 million at December 31,

2002. The decline in our allowance reflected a decline of \$1.1 million in general valuation allowances to \$26.7 million. Allocated allowances increased by \$0.1 million in our single-family portfolio and \$0.1 million in our commercial non-mortgage portfolio, which was partially offset by a \$0.2 million decline in our commercial real estate mortgage portfolio. There was no change in our unallocated allowance of \$2.8 million.

The following table summarizes the activity in our allowance for loan losses for the years indicated.

(In Thousands)	2003	2002	2001	2000	1999	
Balance at beginning of year	\$ 34,999	\$ 36,120	\$ 34,452	\$ 38,342	\$ 31,517	
Provision (reduction)	(3,718)	939	2,564	3,251	11,270	
Charge-offs	(1,139)	(2,231)	(1,348)	(1,749)	(5,535)	
Recoveries	188	171	452	419	1,090	
Transfers (a)	-	-	-	(5,811)	-	
Balance at end of year	\$ 30,330	\$ 34,999	\$ 36,120	\$ 34,452	\$ 38,342	

<sup>(</sup>a) Reduction in 2000 was due to the sale of subsidiary.

Net loan charge-offs were \$1.0 million in 2003, down from \$2.1 million in 2002, but up slightly from \$0.9 million in 2001. The decline from a year ago primarily reflected a \$1.2 million charge-off in 2002 of a commercial real estate loan for which a short-pay was accepted in full consideration of the loan.

was accepted in full considera	ation of the loan.

#### Impaired Loans

We consider a loan to be impaired when, based upon current information and events, we believe it is probable that we will be unable to collect all amounts due according to the contractual terms of the loan agreement. We carry impaired loans at either the present value of expected future cash flows discounted at the loan's effective interest rate or at the loan's observable market price or the net fair value of the collateral securing the loan. Impaired loans exclude large groups of smaller balance homogeneous loans that we collectively evaluate for impairment. Generally, loans we collectively review for impairment include all single family loans and performing multi-family and non-residential loans having principal balances of less than \$5 million, unless an individual loan or borrower relationship warrants separate analysis.

In determining impairment, we consider large non-homogeneous loans with the following characteristics: non-accrual loans, debt restructurings and performing loans which exhibit, among other characteristics, high loan-to-value ratios or delinquent taxes. We base the measurement of collateral dependent impaired loans on the fair value of the loan's collateral. We value non-collateral dependent loans based on a present value calculation of expected future cash flows, discounted at the loan's effective rate. We generally use cash receipts on impaired loans not performing according to contractual terms to reduce the carrying value of the loan, unless we believe we will recover the remaining principal balance of the loan. We include impairment losses in the allowance for loan losses through a charge to provision for loan losses. We include adjustments to impairment losses due to changes in the fair value of the collateral of impaired loans in provision for loan losses. Upon disposition of an impaired loan, we record loss of principal through a charge-off to the allowance for loan losses. At December 31, 2003, the recorded investment in loans for which we have recognized impairment totaled \$12 million, down

Page 58	Navigation Links
---------	------------------

from \$13 million at December 31, 2002. The total allowance for losses related to these loans was \$1 million for both December 31, 2003 and 2002. During 2003, the total interest recognized on the impaired portfolio was \$1.4 million, compared to \$1.3 million in 2002. For further information regarding impaired loans, see Note 5 of the Notes to Consolidated Financial Statements on page 82.

The following table summarizes the activity in our allowance for loan losses associated with impaired loans for the years indicated.

(In Thousands)	2003	2002	2001	2000	1999	
Balance at beginning of year Provision (reduction)	\$ 725 (16)	\$ 759 1,154	\$ 800 (41)	\$ 797 3	\$ 810 (13)	
Charge-offs	-	(1,188)	-	-	-	
Recoveries	-	-	-	-	-	
Balance at end of year	\$ 709	\$ 725	\$ 759	\$ 800	\$ 797	

The provision of \$1.2 million during 2002 and resultant \$1.2 million charge-off related to a commercial real estate loan for which a short-pay was accepted in full consideration.

In addition to losses charged against the allowance for loan losses, we have maintained a valuation allowance for losses on real estate and joint ventures held for investment. The provision in 2003 is related to one property under construction. The provision reductions in the previous two years were, in general, due to a continuing improvement in the real estate market which favorably impacted the valuation of certain neighborhood shopping center investments and to a reduction in the investment in certain joint venture investments.

The following table summarizes the activity in our allowance for real estate and joint ventures held for investment during the years indicated.

(In Thousands)	2003	2002	2001	2000	1999	
Balance at beginning of year	\$ 908	\$ 2,690	\$ 2,997	\$ 2,131	\$ 7,717	
Provision (reduction)	528	(448)	(307)	866	(3,666)	
Charge-offs	-	(1,334)	-	-	(1,920)	
Recoveries	-	-	-	-	-	
Balance at end of year	\$ 1,436	\$ 908	\$ 2,690	\$ 2,997	\$ 2,131	

We do not maintain an allowance for real estate acquired in settlement of loans as we record the related individual assets at the lower of cost or fair value and any losses are recorded as a direct write-off to net operations.

### **Capital Resources and Liquidity**

Our sources of funds include deposits, advances from the FHLB and other borrowings; proceeds from the sale of loans, mortgage-backed securities and real estate; payments from loans and mortgage-backed securities and sales of loan servicing; and income from other investments. Interest rates, real estate sales activity and general economic conditions significantly affect repayments on loans and mortgage-backed securities and deposit inflows and outflows.

Our primary sources of funds generated during 2003 were from:

- principal repayments of \$4.8 billion including prepayments, but excluding our refinances of our existing loans on loans and mortgage-backed securities:
- sales and maturities of \$672 million in U.S. Treasury securities, agency obligations and other investment securities available for sale:
- a net increase of \$505 million in FHLB advances and other borrowings; and
- a net decrease of \$372 million in our loans held for sale.

Page 59 <u>Navigation Links</u>

We used these funds for the following purposes:

- to originate and purchase \$4.6 billion of loans held for investment, excluding refinances of our existing loans;
- to fund a \$945 million decline in deposits; and
- to purchase \$900 million of U.S. Treasury securities, agency obligations and other investment securities available for sale.

Our principal source of liquidity is our ability to utilize borrowings, as needed. Our primary source of borrowings is the FHLB. At December 31, 2003, our FHLB borrowings totaled \$2.1 billion, representing 18.2% of total assets. We currently are approved by the FHLB to borrow up to 40% of total assets to the extent we provide qualifying collateral and hold sufficient FHLB stock. That approved limit would have permitted us, as of year end, to borrow an additional \$2.5 billion. To the extent 2004 deposit growth falls short of satisfying ongoing commitments to fund maturing and withdrawable deposits, repay maturing borrowings, fund existing and future loans, make investments, and continue branch improvement programs, we may utilize our FHLB borrowing arrangement or other sources. As of December 31, 2003, we had commitments to borrowers for short-term rate locks, not including expected fallout, of \$740 million, undisbursed loan funds and unused lines of credit of \$240 million, operating leases of \$17 million and commitments to invest in affordable housing funds of \$3 million. We believe our current sources of funds, including repayments of existing loans, enable us to meet our obligations while maintaining liquidity at appropriate levels.

The holding company currently has adequate liquid assets to meet its obligations and can obtain further funds by means of dividends from subsidiaries, subject to certain limitations, or issuance of further debt or equity. At December 31, 2003, the holding company s liquid assets, including due from Bank interest bearing balances, totaled \$70 million.

On July 24, 2002, our Board of Directors authorized a share repurchase program of up to \$50 million of our common stock. To fund this program, the Bank paid a special \$50 million dividend during 2002 to the holding company. The shares are being repurchased from time-to-time in open market transactions. The timing, volume and price of purchases will be made at our discretion, and will also be contingent upon our overall financial condition, as well as market conditions in general. To-date, a total of 306,300 shares have been repurchased at an average price of \$39.73. There have been no shares repurchased since the fourth quarter of 2002 and, at December 31, 2003, \$38 million of the original authorization remains available for future purchases.

Stockholders equity totaled \$917 million at December 31, 2003, up from \$823 million at December 31, 2002 and \$734 million at December 31, 2001.

#### Contractual Obligations and Other Commitments

Through the normal course of operations, we have entered into certain contractual obligations and other commitments. Our obligations generally relate to funding of our operations through deposits and borrowings as well as leases for premises and equipment, and our commitments generally relate to our lending operations.

We have obligations under long-term operating leases, principally for building space and land. Lease terms generally cover a five-year period, with options to extend, and are non-cancelable. Currently, we have no significant vendor contractual obligations.

Our commitments to originate fixed and variable rate mortgage loans are agreements to lend to a customer as long as there is no violation of any condition established in the commitment. Undisbursed loan funds and unused lines of credit include funds not disbursed, but committed to construction projects and home equity and commercial lines of credit. Letters of credit are conditional commitments issued by us to guarantee the performance of a customer to a third party.

Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Since some commitments expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements. The credit risk involved in issuing lines and letters of credit requires the same creditworthiness evaluation as that involved in extending loan facilities to customers. We evaluate each customer s creditworthiness.

We receive collateral to support commitments for which collateral is deemed necessary. The most

Page 60 <u>Navigation Links</u>

significant categories of collateral include real estate properties underlying mortgage loans, liens on personal property and cash on deposit with us.

We enter into derivative financial instruments as part of our interest rate risk management process, primarily related to our sale of loans in the secondary market. For further information regarding our derivative instruments, see Asset/Liability Management and Market Risk on page 45 and Note 22 of Notes to the Consolidated Financial Statements on page 100.

We sell all loans without recourse. When a loan sold to an investor without recourse fails to perform according to the contractual terms, the investor will typically review the loan file to determine whether defects in the origination process occurred and whether such defects give rise to a violation of a representation or warranty made to the investor in connection with the sale. If such a defect is identified, we may be required to either repurchase the loan or indemnify the investor for losses sustained. If there are no such defects, we have no commitment to repurchase the loan. There were no repurchases or indemnification losses related to such defects in 2003 and there were \$1.8 million of loans repurchased and \$0.1 million of indemnification losses in 2002. These sale contracts may also contain provisions to refund purchase price premiums to the investor if the loans prepay during a period not to exceed 120 days from the sale s date. We reserved less than \$1 million at both December 31, 2003 and 2002 to cover the estimated loss exposure related to early payoffs. See Note 22 of Notes to the Consolidated Financial Statements on page 100.

At December 31, 2003, scheduled maturities of certificates of deposit, FHLB advances and junior subordinated debentures, secondary marketing activities, loans held for investment, future operating minimum lease commitments and other contractual obligations were as follows:

	Within	1 3	4 5	Over	Total	
(In Thousands)	1 Year	Years	Years	5 Years	Balance

#### **Regulatory Capital Compliance**

Our core and tangible capital ratios were both 7.96% and our risk-based capital ratio was 15.55% at December 31, 2003. These levels are up from ratios of 6.92% for both core and tangible capital and 14.08% for risk-based capital at December 31, 2002, and continue to exceed the "well capitalized" standards of 5.00% for core capital and 10.00% for risk-based capital, as defined by regulation.

The following table is a reconciliation of the Bank s stockholder s equity to federal regulatory capital as of December 31, 2003.

	Tangible (	Capital	Core Capital		Risk-Based	Capital		
(Dollars in Thousands)	Amount	Ratio	Amount	Ratio	Amount	Ratio

<sup>(</sup>a) Limited to 1.25% of risk-weighted assets.

#### **Newly Adopted Accounting Principles**

#### Statement of Financial Accounting Standards No. 146

Statement of Financial Accounting Standards No. 146, "Accounting for Costs Associated with Exit or Disposal Activities" ("SFAS 146"), requires us to recognize costs associated with exit or disposal activities when they are incurred rather than at the date of a commitment to an exit or disposal plan. SFAS 146 replaces Emerging Issues Task Force ("EITF") Issue No. 94-3, "Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs

<sup>(</sup>b) Represents the minimum requirement for tangible capital, as no "well capitalized" requirement has been established for this category.

<sup>(</sup>c) A third requirement is Tier 1 capital to risk-weighted assets of 6.00%, which the Bank met and exceeded with a ratio of 15.06%.

Incurred in a Restructuring)." The provisions of SFAS 146 are to be applied prospectively to exit or disposal activities initiated after December 31, 2002.

#### Statement of Financial Accounting Standards No. 148

Statement of Financial Accounting Standards No. 148, "Accounting for Stock-Based Compensation Transition and Disclosure" ("SFAS 148"), amends Statement of Financial Accounting Standards No. 123, "Accounting for Stock-Based Compensation" ("SFAS 123"), to provide alternative methods of transition for an entity that voluntarily changes to the fair value method of accounting for stock-based employee compensation. SFAS 148 also amends the disclosure provisions of SFAS 123 to require prominent disclosure about the effects on reported net income of our accounting policy decisions with respect to stock-based employee compensation. Finally, SFAS 148 amends APB Opinion No. 28, "Interim Financial Reporting", to require disclosure about those effects in interim financial information. Presently, we do not intend to adopt the fair value method. For further in formation regarding our accounting for stock options, see Note 1 on page 72 and Note 19 on page 96 of Notes to the Consolidated Financial Statements.

### Statement of Financial Accounting Standards No. 149

Statement of Financial Accounting Standards No. 149, "Amendment of Statement 133 on Derivative Instruments and Hedging Activities" ("SFAS 149"), clarifies and amends financial accounting and reporting for derivative instruments, including certain derivative instruments embedded in other contracts and for hedging activities under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" ("SFAS 133"). In general, SFAS 149 is effective for contracts entered into or modified after

Page 62	Navigation Links
---------	------------------

June 30, 2003, and for hedging relationships designated after June 30, 2003. The financial impact of SFAS 149 did not have a material effect on us.

#### Statement of Financial Accounting Standards No. 150

Statement of Financial Accounting Standards No. 150, "Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity" ("SFAS 150"), establishes standards for how an issuer classifies and measures certain financial instruments with characteristics of both liabilities and equity that have been presented either entirely as equity or between the liabilities section and the equity section of the statement of financial position. SFAS 150 is effective for financial instruments entered into or modified after May 31, 2003, and otherwise is effective at the beginning of the first interim period beginning after June 15, 2003. SFAS 150 has not had a material financial impact on us.

### Financial Accounting Standards Board Interpretation 46

Financial Accounting Standards Board ("FASB") Interpretation 46 (revised December 2003), "Consolidation of Variable Interest Entities" ("FIN 46R"), requires a variable interest entity to be consolidated by a company if that company is subject to a majority of the risk of loss from the variable interest entity in its consolidated for receive a majority of the entity is residual returns or both. Prior to FIN 46R, a company included another entity in its consolidated financial statements only if it controlled the entity through voting interests. FIN 46R also requires disclosures about variable interest entities that the company is not required to consolidate but in which it has a significant variable interest. The consolidated requirements of FIN 46R apply to all Special Purpose Entities ("SPEs") by the end of the first reporting period that ends after December 15, 2003. The provisions of FIN 46R for interests held by public entities in variable interest entities that are not SPEs are required to be applied by the first reporting period that ends after March 15, 2004. We have no business interests that require consolidation as a result of applying the provisions of FIN 46R. For further information regarding our real estate joint venture partnerships, see Note 6 on page 84.

#### Capital Securities (Formerly Consolidated)

Downey Financial Capital Trust I ("Trust"), an entity established by Downey Financial Corp. for the purpose of issuing capital securities, was previously reported on a consolidated basis, with the capital securities issued by the Trust shown on the balance sheet consistent with generally accepted accounting principles. As of December 31, 2003, in accordance with FIN 46R (revised December 2003), the Trust is no longer reported on a consolidated basis. Therefore, the capital securities of \$120 million no longer appear on the balance sheet. Instead, the junior subordinated debentures of \$124 million payable by Downey Financial Corp. to the Trust and the investment in the Trust s common stock of \$4 million are separately reported. This change primarily impacted the balance sheet and had no effect on reported net income. Additionally, as permitted by generally accepted accounting principles,

prior period data has been restated to conform to the new basis of presentation.

#### **Current Accounting Issues**

#### Interest Rate Lock Derivatives

In accordance with SFAS 149, expected interest rate lock commitments on mortgage loans that will be held for sale must be accounted for as derivatives and marked to market in accordance with SFAS 133. All other interest rate lock commitments are excluded from SFAS 133, pursuant to SFAS 149. In October 2003, the FASB decided to add a project to its agenda that would clarify how fair value should be measured for interest rate lock derivatives. The FASB will determine if it is appropriate to recognize an asset component when measuring the value of the interest rate lock derivative. No timetable has been established yet for the completion of this project.

In the meantime, in a speech given by a Securities and Exchange Commission ("SEC") staff member in December 2003, it was expressed that the SEC staff is view for valuing interest rate lock derivatives is that they are written options in which a liability should be recognized initially, with the offsetting debit (to the extent that consideration is not received) recorded as SFAS 133 losses in net gains on sales of loans and mortgage-backed securities. Subsequent to initial measurement, the commitments would be valued like other written options. That is, the amount would always be reported as a liability until expiration or termination of the commitment. The speech directed compliance with this accounting policy guidance by the first reporting period beginning after March 15, 2004.

Currently, we do not recognize an asset on the initial day of an interest rate lock derivative, but we do recognize an asset component when market interest rates drop below the committed interest rate. If generally accepted accounting principles are changed to reflect the SEC s views, the timing of the gain recognition inherent within our interest rate lock derivatives would be delayed until the anticipated loans are sold. Generally, loans held

Page 63 <u>Navigation Links</u>

for sale are sold within 60 to 90 days after the initial recognition of the interest rate lock derivative. The provisions for the SEC s accounting policy guidance are to be applied prospectively.

At December 31, 2003, we had assets recorded for interest rate lock derivatives of \$0.1 million and capitalized basis adjustment to loans held for sale of \$0.3 million, which reflects the change in fair value of the interest rate lock derivative from the date of commitment to the date of funding. At December 31, 2002, assets were recorded for interest rate lock derivatives of \$5.4 million and capitalized basis adjustment to loans held for sale of \$2.1 million. The offsetting credit to these assets was recorded as SFAS 133 gains in net gains on sales of loans and mortgage-backed securities.

### ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Downey Financial Corp. And Subsidiaries

#### **Notes to Consolidated Financial Statements**

For the Years Ended December 31, 2003, 2002 and 2001

### (1) Summary of Significant Accounting Policies

### **Principles of Consolidation**

The consolidated financial statements of Downey Financial Corp. and subsidiaries ("Downey") include all accounts of Downey Financial Corp. and the consolidated accounts of all subsidiaries, including Downey Savings and Loan Association, F.A. ("Bank"). All significant intercompany balances and transactions have been eliminated.

#### **Business**

Downey provides a full range of financial services to individual and corporate customers. Downey is subject to competition from other financial institutions. Downey is subject to the regulations of certain governmental agencies and undergoes periodic examinations by those regulatory authorities.

#### Basis of Financial Statement Presentation

The accompanying consolidated financial statements have been prepared in conformity with generally accepted accounting principles accepted in the United States of America. In preparing the consolidated financial statements,

management is required to make estimates and assumptions that affect the reported amounts of assets and liabilities as of the dates of the balance sheets and the results of operations for the reporting periods. Actual results could differ significantly from those estimates.

Material estimates that are particularly susceptible to significant change in the near term relate to the determination of the allowances for losses on loans, real estate and mortgage servicing rights ("MSRs") and the valuation of expected rate lock commitments. Management believes that the allowances established for losses on loans, real estate and MSRs are adequate and that the valuation of expected rate lock commitments are reasonable. While management uses available information to recognize losses on loans, real estate and MSRs and to value expected rate lock commitments, future changes to the allowances or valuations may be necessary based on changes in economic conditions. In addition, various regulatory agencies, as an integral part of their examination process, periodically review Downey s allowances for losses on loans, real estate and MSRs and valuation of expected rate lock commitments. Such agencies may require Downey to recognize changes to the allowances or valuations based on their judgments about information available to them at the time of their examination.

Downey is required to carry its loans held for sale portfolio, mortgage-backed and investment securities available for sale portfolios, real estate acquired in settlement of loans, real estate held for investment or under development, derivatives and MSRs at the lower of cost or fair value or in certain cases, at fair value. Fair value estimates are made at a specific point in time based upon relevant market information and other information about the asset or liability. Such estimates related to loans held for sale is estimated based upon market prices obtained from readily available market quote systems. Fair value for the mortgage-backed and investment securities portfolios and derivatives include published bid prices or bid quotations received from securities dealers. Fair value estimates for real estate acquired in settlement of loans and real estate held for investment or under development is determined by current appraisals and, where no active market exists for a particular property, discounting a forecast of expected cash flows at a rate commensurate with the risk involved. Fair value for MSRs is determined by computing the present value of the expected net servicing income from the portfolio.

#### **Newly Adopted Accounting Principles**

Statement of Financial Accounting Standards No. 146

Statement of Financial Accounting Standards No. 146, "Accounting for Costs Associated with Exit or Disposal Activities" ("SFAS 146"), requires Downey to recognize costs associated with exit or disposal activities when they are incurred rather than at the date of a commitment to an exit or disposal plan. SFAS 146 replaces Emerging Issues Task Force ("EITF") Issue No. 94-3, "Liability Recognition for Certain

Page 72 <u>Navigation Links</u>

Downey Financial Corp. And Subsidiaries

### **Notes to Consolidated Financial Statements---(Continued)**

Employee Termination Benefits and Other Costs to Exit an Activity (including Certain Costs Incurred in a Restructuring)." The provisions of SFAS 146 are to be applied prospectively to exit or disposal activities initiated after December 31, 2002. Statement of Financial Accounting Standards No. 148

Statement of Financial Accounting Standards No. 148, "Accounting for Stock-Based Compensation Transition and Disclosure" ("SFAS 148"), amends Statement of Financial Accounting Standards No. 123, "Accounting for Stock-Based Compensation" ("SFAS 123"), to provide alternative methods of transition for an entity that voluntarily changes to the fair value method of accounting for stock-based employee compensation. SFAS 148 also amends the disclosure provisions of SFAS 123 to require prominent disclosure about the effects on reported net income of Downey s accounting policy decisions with respect to stock-based employee compensation. Finally, SFAS 148 amends APB Opinion No. 28, "Interim Financial Reporting", to require disclosure about those effects in interim financial information. Presently, Downey does not intend to adopt the fair value method. For further information regarding our accounting for stock options, see Note 19.

Statement of Financial Accounting Standards No. 149

Statement of Financial Accounting Standards No. 149, "Amendment of Statement 133 on Derivative Instruments and Hedging Activities" ("SFAS 149"), clarifies and amends financial accounting and reporting for derivative instruments, including certain derivative instruments embedded in other contracts and for hedging activities under Statement of Financial Accounting Standards No. 133, "Accounting for Derivative Instruments and Hedging Activities" ("SFAS 133"). In general, SFAS 149 is effective for contracts entered into or modified after June 30, 2003 and for hedging relationships designated after June 30, 2003. The financial impact of SFAS 149 did not have a material effect on Downey.

Statement of Financial Accounting Standards No. 150

Statement of Financial Accounting Standards No. 150, "Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity" ("SFAS 150"), establishes standards for how an issuer classifies and measures certain financial instruments with characteristics of both liabilities and equity that have been presented either entirely as equity or between the liabilities section and the equity section of the statement of financial position. SFAS 150 is effective for financial instruments entered into or modified after May 31, 2003, and otherwise is effective at the beginning of the first interim period beginning after June 15, 2003. SFAS 150 has not had a material financial impact on Downey.

Financial Accounting Standards Board Interpretation 46

Financial Accounting Standards Board ("FASB") Interpretation 46 (revised December 2003), "Consolidation of Variable Interest Entities" ("FIN 46R"), requires a variable interest entity to be consolidated by a company if that company is subject to a majority of the risk of loss from the variable interest entity s activities or is entitled to receive a majority of the entity s residual returns or both. Prior to FIN 46R, a company included another entity in its consolidated financial statements only if it controlled the entity through voting interests. FIN 46R also requires disclosures about variable interest entities that the company is not required to consolidate but in which it has a significant variable interest. The consolidated requirements of FIN 46R apply to all Special Purpose Entities ("SPEs") by the end of the first reporting period that ends after December 15, 2003. The provisions of FIN 46R for interests held by public entities in variable interest entities that are not SPEs are required to be applied by the first reporting period that ends after March 15, 2004. Downey has no business interests that require consolidation as a result of applying the provisions of FIN 46R. For further information regarding Downey s real estate joint venture partnerships, see Note 6.

#### Capital Securities (Formerly Consolidated)

Downey Financial Capital Trust I ("Trust"), an entity established by Downey Financial Corp. for the purpose of issuing capital securities, was previously reported on a consolidated basis, with the capital securities issued by the Trust shown on the balance sheet consistent with generally accepted accounting principles.

Page 73 <u>Navigation Links</u>

Downey Financial Corp. And Subsidiaries

### Notes to Consolidated Financial Statements---(Continued)

As of December 31, 2003, in accordance with FIN 46R, the Trust is no longer reported on a consolidated basis. Therefore, the capital securities of \$120 million no longer appear on the balance sheet. Instead, the junior subordinated debentures of \$124 million payable by Downey Financial Corp. to the Trust and the investment in the Trust s common stock of \$4 million are separately reported. This change primarily impacted the balance sheet and had no effect on reported net income. Additionally, as permitted by generally accepted accounting principles, prior period data has been restated to conform to the new basis of presentation.

#### Cash and Cash Equivalents

For purposes of the statements of cash flows, cash and cash equivalents include cash on hand, amounts due from banks, certificates of deposit with maturities three months or less and federal funds sold. Generally, federal funds are purchased and sold for one-day periods.

# Mortgage-Backed Securities Purchased Under Resale Agreements, U.S. Treasury Securities and Agency Obligations, Other Investment Securities, Municipal Securities and Mortgage-Backed Securities

Downey has established written guidelines and objectives for its investing activities. At the time of purchase of a mortgage-backed security purchased under resale agreement, U.S. Treasury security and agency obligation, other investment security, municipal security or a mortgage-backed security, management of Downey designates the security as either held to maturity, available for sale or held for trading based on Downey s investment objectives, operational needs and intent. Downey then monitors its investment activities to ensure that those activities are consistent with the established guidelines and objectives.

#### Held to Maturity

Securities held to maturity are carried at cost, adjusted for amortization of premiums and accretion of discounts which are recognized in interest income using the interest method. Mortgage-backed securities represent participating interests in pools of long-term first mortgage loans originated and serviced by the issuers of the securities. Mortgage-backed securities held to maturity are carried at unpaid principal balances, adjusted for unamortized premiums and unearned discounts. Premiums and discounts on mortgage-backed securities are amortized using the interest method over the remaining period to the call date or contractual maturity, adjusted for anticipated prepayments. It is the positive intent of Downey, and Downey has the ability, to hold these securities until maturity as part of its portfolio of long-term, interest-earning assets. If the cost basis of these securities is determined to be other than temporarily impaired, the amount of the impairment is charged to operations.

#### Available for Sale

Securities available for sale are carried at fair value. Premiums and discounts are amortized using the interest method over the remaining period to the call date or contractual maturity and, in the case of mortgage-backed securities, adjusted for anticipated prepayments. Unrealized holding gains and losses, or valuation allowances established for net unrealized losses, are excluded from earnings and reported as a separate component of stockholders equity as accumulated other comprehensive income, net of income taxes, unless the security is deemed other than temporarily impaired. If the security is determined to be other than temporarily impaired, the amount of the impairment is charged to operations.

Realized gains and losses on the sale of securities available for sale, determined using the specific identification method and recorded on a trade date basis, are reflected in earnings.

#### Held for Trading

Securities held for trading are carried at fair value. Realized and unrealized gains and losses are reflected in earnings.

Page 74

**Navigation Links** 

Downey Financial Corp. And Subsidiaries

### **Notes to Consolidated Financial Statements---(Continued)**

#### **Derivatives and Hedges**

Derivative financial instruments are recorded at fair value and reported as either assets or liabilities on the balance sheet. The accounting for gains and losses associated with changes in the fair value of derivatives are reported in current earnings or other comprehensive income, net of tax, if they qualify for hedge accounting and if the hedge is highly effective in achieving offsetting changes in the cash flows of the asset or liability being hedged. Derivative instruments designated in a hedge relationship to mitigate exposure to the variability in fair values or expected future cash flows are considered fair value hedges or cash flow hedges, respectively. The method used for assessing the effectiveness of a hedging derivative, as well as the measurement approach for determining the ineffective aspects of the hedge, is established at the inception of the hedge.

#### Loans Held for Sale

Downey identifies those loans which foreseeably may be sold prior to maturity. These loans have been classified as held for sale in the Consolidated Balance Sheets and are recorded at the lower of amortized cost or fair value. Effective with the adoption of SFAS 133, the carrying amount includes a basis adjustment to the loan at funding resulting from the change in the fair value of the interest rate lock derivative from the date of commitment to the date of funding. In response to unforeseen events such as changes in regulatory capital requirements, liquidity shortfalls, changes in the availability of sources of funds and excess loan demand by borrowers that could not be controlled immediately by loan price changes, Downey may sell loans which had been held for investment. In such occurrences, the loans are transferred at amortized cost and the lower of cost or fair value method is then applied.

### Gains or Losses on Sales of Loans and Mortgage Servicing Rights ("MSRs")

Gains or losses on sales of loans are recognized at the time of sale and are determined by the difference between the net sales proceeds and the allocated basis of the loans sold. Downey capitalizes MSRs acquired through purchase or when mortgage loans are sold or securitized with servicing rights retained. The total cost of the mortgage loans designated for sale is allocated to the MSRs and the mortgage loans without the MSRs based on their relative fair values. The MSRs are included as a component of gain on sale of loans. The MSRs are amortized in proportion to and over the estimated period of net servicing income. Such amortization is reflected as a component of loan servicing income (loss).

#### Allowance for MSR Losses

The MSRs are periodically reviewed for impairment based on their fair value. The fair value of the MSRs, for the purposes of impairment, is measured using a discounted cash flow analysis based on available market quotes, market-adjusted discount rates and anticipated prepayment speeds. Market sources are used to determine prepayment speeds, the net cost of servicing per loan, inflation rate and default and interest rates for mortgages.

The Company capitalizes and measures MSR impairment on a disaggregated basis based on the following predominant risk characteristics of the underlying mortgage loans: fixed-rate mortgage loans by loan term and coupon rate (less than 7%, 150 basis point increments between 7% and 10%, and greater than 10%), and loan term for adjustable rate mortgages. Impairment losses are recognized through a valuation allowance for each impaired stratum, with any associated provision recorded as a component of loan servicing income (loss).

### Loans Receivable Held for Investment

Loans receivable are recorded at cost, net of discounts and premiums, undisbursed loan proceeds, net deferred fees and costs and the allowance for loan losses.

Interest income on loans is accrued based on the outstanding principal amount of loans using the interest method. Discounts and premiums on loans are amortized to income using the interest method over the remaining period to contractual maturity. The amortization of discounts into income is discontinued on loans that are contractually ninety days past due or when collection of interest appears doubtful.

Page 75

**Navigation Links** 

Downey Financial Corp. And Subsidiaries

#### Notes to Consolidated Financial Statements---(Continued)

Loan origination fees and related incremental direct loan origination costs are deferred and amortized to income using the interest method over the contractual life of the loans, adjusted for actual prepayments. Fees received for a commitment to originate or purchase a loan or group of loans are deferred and, if the commitment is exercised, recognized over the life of the loan as an adjustment of yield or, if the commitment expires unexercised, recognized as income upon expiration of the commitment. The amortization of deferred fees and costs is discontinued on loans that are contractually ninety days past due or when collection of interest appears doubtful.

Accrued interest on loans that are contractually ninety days or more past due or when collection of interest appears doubtful is generally reversed and charged against interest income. Income is subsequently recognized only to the extent cash payments are received and the principal balance is expected to be recovered. Such loans are restored to an accrual

status only if the loan is brought contractually current and the borrower has demonstrated the ability to make future payments of principal and interest.

#### Allowance for Loan Losses

The allowance for loan losses is maintained at an amount management deems adequate to cover inherent losses. Downey has implemented and adheres to an internal asset review system and loan loss allowance methodology designed to provide for the detection of problem assets and an adequate allowance to cover loan losses. In determining the allowance for loan losses related to specific large loans (loans over \$5 million), management evaluates its allowance on an individual loan basis, including an analysis of the creditworthiness, cash flows and financial status of the borrower, and the condition and the estimated value of the collateral. Generally, Downey reviews all loans under \$5 million by analyzing their performance and composition of their collateral as a whole because of the relatively homogeneous nature of the portfolios, unless an individual loan or borrower relationship warrants separate analysis. Given the above evaluations, the amount of the allowance is based upon the summation of general valuation allowances, allocated allowances and an unallocated allowance. General valuation allowances relate to loans with no well-defined deficiency or weakness and are determined by applying against such loans factors for each major loan category that consider past loss experience and loan duration. Allocated allowances relate to loans with well-defined deficiencies or weaknesses and are generally determined by loss factors that consider past loss experience for such loans or are determined by the excess of the recorded investment in the loan over the fair value of the collateral, where appropriate. The unallocated allowance is more subjective and is reviewed quarterly to take into consideration estimation errors and other factors such as prevailing and forecasted economic conditions.

Downey considers a loan to be impaired when, based upon current information and events, it believes it is probable that Downey will be unable to collect all amounts due according to the contractual terms of the loan agreement. In determining impairment, Downey considers large non-homogeneous loans with the following characteristics: non-accrual loans, debt restructurings and performing loans which exhibit, among other characteristics, high loan-to-value ratios or delinquent taxes. Downey bases the measurement of collateral dependent impaired loans on the fair value of the loan s collateral. Non-collateral dependent loans are valued based on a present value calculation of expected future cash flows, discounted at the loan s effective rate. Cash receipts on impaired loans not performing according to contractual terms are generally used to reduce the carrying value of the loan, unless Downey believes it will recover the remaining principal balance of the loan. Impairment losses are included in the allowance for loan losses through a charge to provision for loan losses. Adjustments to impairment losses due to changes in the fair value of collateral of impaired loans are included in provision for loan losses. Upon disposition of an impaired loan, loss of principal, if any, is recorded through a charge-off to the allowance for loan losses.

In the opinion of management, and in accordance with the loan loss allowance methodology, the present allowance is considered adequate to absorb estimable and probable loan losses. Additions and reductions to the allowances are reflected in current operations. Charge-offs to the allowance are made when the loan is considered uncollectible or is transferred to real estate owned and the fair value of the property is less than the loan balance. Recoveries are credited to the allowance.

For regulatory capital purposes, the Bank s general allowance for loan losses is included to a limit of 1.25% of regulatory risk-weighted assets.

Page 76 <u>Navigation Links</u>

Downey Financial Corp. And Subsidiaries

### Notes to Consolidated Financial Statements---(Continued)

#### Loan Servicing

Downey services mortgage loans for investors. Fees earned for servicing loans owned by investors are reported as income when the related mortgage loan payments are collected. Loan servicing costs are charged to expense as incurred.

#### Investment in Real Estate and Joint Ventures

Real estate held for investment or under development is held at the lower of cost (less accumulated depreciation) or fair value. Costs, including interest, of holding real estate in the process of development or improvement are capitalized, whereas costs relating to holding completed property are expensed. An allowance for losses is established by a charge to operations if the carrying value of a property exceeds its fair value, including the consideration of disposition costs.

Downey utilizes the equity method of accounting for investments in joint ventures, as they do not meet consolidation requirements. All intercompany profits are eliminated.

Income from the sale of real estate is recognized principally when title to the property has passed to the buyer, minimum down payment requirements are met and the terms of any notes received by Downey satisfy continuing investment requirements. At the time of sale, costs are relieved from real estate projects on a relative sales value basis and charged to operations.

#### Real Estate Acquired in Settlement of Loans

Real estate acquired through foreclosure is initially recorded at the lower of cost or fair value, net of an allowance for estimated selling costs, on the date of foreclosure and a loan charge-off is recorded, if necessary. After that, the individual assets are recorded at the lower of cost or fair value. All legal fees and direct costs, including foreclosure and other related

costs, are expensed as incurred.

#### Premises and Equipment

Buildings, leasehold improvements and furniture, fixtures and equipment are carried at cost, less accumulated depreciation and amortization. Buildings and furniture, fixtures and equipment are depreciated using the straight-line method over the estimated useful lives of the assets. The cost of leasehold improvements is amortized using the straight-line method over the shorter of the estimated useful life of the asset or the terms of the related leases.

#### Impairment of Long-Lived Assets

Downey reviews long-lived assets and certain identifiable intangibles for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Recoverability of assets to be held and used is measured by a comparison of the carrying amount of an asset to future net cash flows expected to be generated by the asset. If such assets are considered to be impaired, the impairment to be recognized is measured by the amount by which the carrying amount of the assets exceed the fair value of the assets. Assets to be disposed of are reported at the lower of the carrying amount or fair value less costs to sell.

### Securities Sold Under Agreements to Repurchase

Downey enters into sales of securities under agreements to repurchase ("reverse repurchase agreements"). Reverse repurchase agreements are treated as financing arrangements and, accordingly, the obligations to repurchase the securities sold are reflected as liabilities in Downey's consolidated financial statements. The securities collateralizing reverse repurchase agreements are delivered to several major national brokerage firms who arranged the transactions. These securities are reflected as assets in Downey's consolidated financial statements. The brokerage firms may loan such securities to other parties in the normal course of their operations and agree to return the identical securities to Downey at the maturity of the agreements.

Page 77	Navigation Links
---------	------------------

Downey Financial Corp. And Subsidiaries

### **Notes to Consolidated Financial Statements---(Continued)**

#### Income Taxes

Downey applies the asset and liability method of accounting for income taxes. The asset and liability method recognizes deferred income taxes for the tax consequences of "temporary differences" by applying enacted statutory tax rates applicable to future years to differences between the financial statement carrying amounts and the tax bases of existing assets and liabilities. The effect on deferred taxes of a change in tax rates is recognized in income in the period that includes the enactment date.

Deferred tax assets are to be recognized for temporary differences that will result in deductible amounts in future years and for tax carryforwards if, in the opinion of management, it is more likely than not that the deferred tax assets will be realized.

#### Treasury Stock

Downey applies the cost method of accounting for treasury stock. The cost method requires Downey to record the reacquisition cost of treasury stock as a deduction from stockholders equity on the balance sheet. The treasury stock account is increased for the cost of the shares acquired and is reduced upon reissuance at cost on a first-in-first-out basis. If the treasury shares are reissued at a price in excess of the acquisition cost, the excess is added to paid-in capital from treasury stock. If the treasury shares are reissued at less than acquisition cost, the deficiency is treated first as a reduction of any paid-in capital related to previous reissuances or retirements. If the balance in paid-in capital from treasury stock is insufficient to absorb the deficiency, the remainder is recorded as a reduction of retained earnings.

#### Stock Option Plan

(In Thousands, Except Per Share Data)

Downey records compensation expense on the date of grant only if the current market price of the underlying stock exceeded the exercise price rather than recognizing as expense over the vesting period the fair value of all stock-based awards on the date of grant. Had compensation expense for Downey s stock option plan been determined based on the fair value estimated using the Black-Scholes model at the grant date for previous awards, Downey s net income and income per share would have been reduced to the pro forma amounts indicated for the years below:

2002

2001

2003

Net income:				
As reported	\$ 101,741	\$ 112,293	\$ 120,181	
Stock based compensation expense, net of tax	-	(13)	(36)	
Pro forma	101,741	112,280	120,145	
Earnings per share Basic:				

As reported	\$	3.64 \$	3.99 \$	4.26
Pro forma		3.64	3.99	4.26
Earnings per share Dilu	d:			
As reported		3.64	3.99	4.25
Pro forma		3.64	3.99	4.25

As of December 31, 2002, stock-based compensation would have been fully expensed over the vesting period of the stock options granted, if Downey had recorded stock-based compensation expense.

#### Per Share Information

Two earnings per share ("EPS") measures are presented. Basic EPS excludes dilution and is computed by dividing income available to common stockholders by the weighted average number of common shares outstanding for the period, excluding common shares in treasury. Diluted EPS reflects the potential dilution that could occur if securities or other contracts to issue common stock were exercised or converted into common stock or resulted from issuance of common stock that then shared in earnings, excluding common shares in treasury.

### Notes to Consolidated Financial Statements---(Continued)

### **Current Accounting Issues**

Interest Rate Lock Derivatives

In accordance with SFAS 149, expected interest rate lock commitments on mortgage loans that will be held for sale must be accounted for as derivatives and marked to market in accordance with SFAS 133. All other interest rate lock commitments are excluded from SFAS 133, pursuant to SFAS 149. In October 2003, the FASB decided to add a project to its agenda that would clarify how fair value should be measured for interest rate lock derivatives. The FASB will determine if it is appropriate to recognize an asset component when measuring the value of the interest rate lock derivative. No timetable has been established yet for the completion of this project.

In the meantime, in a speech given by a Securities and Exchange Commission ("SEC") staff member in December 2003, it was expressed that the SEC staff s view for valuing interest rate lock derivatives is that they are written options in which a liability should be recognized initially, with the offsetting debit (to the extent that consideration is not received) recorded as SFAS 133 losses in net gains on sales of loans and mortgage-backed securities. Subsequent to initial measurement, the commitments would be valued like other written options. That is, the amount would always be reported as a liability until expiration or termination of the commitment. The speech directed compliance with this accounting policy guidance by the first reporting period beginning after March 15, 2004.

Currently, Downey does not recognize an asset on the initial day of an interest rate lock derivative, but does recognize an asset component when market interest rates drop below the committed interest rate. If generally accepted accounting principles are changed to reflect the SEC s views, the timing of the gain recognition inherent within Downey s interest rate lock derivatives would be delayed until the anticipated loans are sold. Generally, loans held for sale are sold within 60 to 90 days after the initial recognition of the interest rate lock derivative. The provisions for the SEC s accounting policy guidance are to be applied prospectively.

At December 31, 2003, Downey had assets recorded for interest rate lock derivatives of \$0.1 million and capitalized basis adjustment to loans held for sale of \$0.3 million, which reflects the change in fair value of the interest rate lock derivative from the date of commitment to the date of funding. At December 31, 2002, assets were recorded for interest rate lock derivatives of \$5.4 million and capitalized basis adjustment to loans held for sale of \$2.1 million. The offsetting credit to these assets was recorded as SFAS 133 gains in net gains on sales of loans and mortgage-backed securities.

#### (2) U.S. Treasury Securities, Agency Obligations and Other Investment Securities Available for Sale

The amortized cost and estimated fair value of U.S. Treasury securities, agency obligations and other investment securities available for sale are summarized as follows:

		Gross	Gross	Estimated
	Amortized	Unrealized	Unrealized	Fair
(In Thousands)	Cost	Gains	Losses	Value

U.S. Treasury and agency securities	\$ 688,612	\$ 1,839	\$ 170	\$ 690,281	
Other investment securities	66	-	-	66	
December 31, 2003	\$ 688,678	\$ 1,839	\$ 170	\$ 690,347	
U.S. Treasury and agency					
securities	\$ 455,761	\$ 2,036	\$ -	\$ 457,797	
	\$ 455,761 67	\$ 2,036	\$ - -	\$ 457,797 67	
securities		\$ ,	\$		
securities		\$ -	\$		

At December 31, 2003, all of these investment securities contained call provisions ranging from January 7, 2004 until maturity.

The fair value of temporarily impaired securities, the amount of unrealized losses and the length of time these unrealized losses existed as of December 31, 2003 are as follows:

	Less than 12 months or months longer Total
(In Thousands)	Unrealized Unrealized Unrealized Fair Fair Value Losses Valu <b>e</b> ossesFair Value Losses
U.S. Treasury and agency securities Other investment securities	\$ 47,550 \$ 170 \$ - \$ - \$ 47,550 \$ 170 
Total temporarily impaired securities	\$ 47,550 \$ 170 \$ - \$ - \$ 47,550 \$ 170

The amortized cost and estimated fair value of U.S. Treasury securities, agency obligations and other investment securities available for sale at December 31, 2003, by contractual maturity, are shown below.

(In Thousands)	Amortized Cost	Fair Value	
Due in one year or less  Due after one year through five years  Due after five years	\$ - 89,652 599,026	\$ - 89,605 600,742	
Total	\$ 688,678	\$ 690,347	

Proceeds, gross realized gains and losses on the sales of U.S. Treasury securities, agency obligations and other investment securities available for sale are summarized as follows:

(In Thousands)	2003	2002	2001	
Proceeds	\$ 15,275	\$ 65,993	\$ 29,139	

Gross realized gains	\$ 8	\$ 675	\$ 329	
Gross realized losses	\$ -	\$ 456	\$ -	

Net unrealized gains on investment securities available for sale were recognized in stockholders equity as accumulated other comprehensive income in the amount of \$1.7 million, or \$1.0 million net of income taxes, at December 31, 2003, compared to net unrealized gains of \$2.0 million, or \$1.2 million net of income taxes, at December 31, 2002.

Downey Financial Corp. And Subsidiaries

### **Notes to Consolidated Financial Statements---(Continued)**

(3) Loans and Mortgage-Backed Securities Purchased Under Resale Agreements and Other Investment Securities Held to Maturity

#### Loans and Mortgage-Backed Securities Purchased Under Resale Agreements

There were no outstanding loans or mortgage-backed securities purchased under resale agreements at December 31, 2003 or 2002. The average interest rate and balance of such transactions was 1.17% and \$19 million, respectively, during 2003 and 1.80% and \$4 million, respectively, during 2002. The maximum amount outstanding at any month-end during 2003 was \$100 million and \$10 million during 2002.

#### Municipal Securities Held to Maturity

The amortized cost and estimated fair value of municipal securities held to maturity are summarized as follows:

	Amortized	Gross Unrealized	Gross Unrealized	Estimated Fair	
(In Thousands)	Cost	Gains	Losses	Value	
December 31, 2003	\$ -	\$ -	\$ -	\$ -	
December 31, 2002	\$ 6,149	\$ -	\$ 14	\$ 6,135	

All of the investment at December 31, 2002 represented an industrial revenue bond on which the interest income was not subject to federal income taxes. Although the bond had a maturity in 2015, it was repaid during 2003.

### (4) Mortgage-Backed Securities Available for Sale

The amortized cost and estimated fair value of the mortgage-backed securities available for sale are summarized as follows:

(In Thousands)	Aı	nortized Cost	Unre	ross ealized ains	dUnre	oss alizeo sses	'	stimated Fair Value	
December 31, 2003:

Non-agency certificates	\$	2,210	\$	43	\$	-	\$	2,253	
Total	\$	2,210	\$	43	\$	-	\$	2,253	

Net unrealized gains on mortgage-backed securities available for sale were recognized in stockholders equity as accumulated other comprehensive income in the amount of \$7,000, or \$4,000 net of income taxes, at December 31, 2003 and \$43,000, or \$25,000 net of income taxes, at December 31, 2002.

Included in our mortgage-backed securities available for sale results are loans originated for sale that are exchanged with government-sponsored agencies for mortgage-backed securities collateralized by these loans. Gains and losses are not recorded on exchange until the securities are sold to a third party, usually the same day.

	Page 81					<u>Navigation Li</u>

Total loans held for sale, net	\$	279,657	\$	652,052	

<sup>(</sup>a) Reflected the change in fair value of the rate lock derivative from the commitment date to the date of funding. At December 31, 2003, over 95% of the real estate securing Downey s loans was located in California.

The combined weighted average interest yield on loans receivable held for investment and sale was 4.61% and 5.83% at December 31, 2003 and 2002, respectively, and averaged 4.83%, 5.93% and 7.80% during 2003, 2002 and 2001, respectively.

Most of our adjustable rate mortgages adjust the interest rate monthly and the payment amount annually. These monthly adjustable rate mortgages allow for negative amortization, which is the addition to loan principal of accrued interest that exceeds the required monthly loan payments. At December 31, 2003, loans with negative amortization represented 73% of Downey s adjustable rate one-to-four unit residential portfolio, of which \$48 million represented the amount of negative amortization included in the loan balance. This compares to 75% and \$112 million, respectively, at December 31, 2002.

Net charge-offs represented 0.01%, 0.02% and 0.01% of average loans for 2003, 2002 and 2001, respectively. All impaired loans at December 31, 2003, 2002 and 2001 were secured by commercial real estate. The following table presents impaired loans with specific allowances and the amount of such allowances and impaired loans without specific allowances.

(In Thousands)	Carrying Specific Net Value Allowance Balance
December 31, 2003:	
Loans with specific allowances	\$ - \$ - \$ -
Loans without specific allowances	12,485 - 12,485
Total impaired loans	\$ 12,485 \$ - \$ 12,485
December 31, 2002:	
Loans with specific allowances	\$ - \$ - \$ -
Loans without specific allowances	12,714 - 12,714
Total impaired loans	\$ 12,714 \$ - \$ 12,714
December 31, 2001:	
Loans with specific allowances	\$ - \$ - \$ -
Loans without specific allowances	13,201 - 13,201
Total impaired loans	\$ 13,201 \$ - \$ 13,201

The average recorded investment in impaired loans totaled \$13 million in 2003 and \$15 million in 2002. During 2003, total interest recognized on the impaired loan portfolio was \$1.4 million, compared to \$1.3 million in 2002 and \$1.7 million in 2001.

The aggregate amount of non-accrual loans receivable that are contractually past due 90 days or more as to principal or interest, in the foreclosure process, restructured, or upon which interest collection is doubtful were \$43 million and \$67 million at December 31, 2003 and 2002, respectively. At December 31, 2003 and 2002, we had no troubled debt restructurings.

Page 83	]	<u>Navigation</u>	Links
•	-		

Downey Financial Corp. And Subsidiaries

### **Notes to Consolidated Financial Statements---(Continued)**

Interest due on non-accrual loans, but excluded from interest income, was approximately \$1.5 million at December 31, 2003, compared to \$2.6 million at December 31, 2002 and \$3.4 million at December 31, 2001.

Downey has had, and expects in the future to have, transactions in the ordinary course of business with executive officers, directors and their associates on substantially the same terms, including interest rates and collateral, as those prevailing at the time for comparable transactions with other non-related parties. In the opinion of management, those transactions neither involve more than the normal risk of collectibility nor present any unfavorable features. At both December 31, 2003 and 2002, the Bank had extended loans to two of its directors and their associates totaling \$20 million. All such loans are performing in accordance with their loan terms. Presented below is a summary of activity with respect to such loans for the years ending December 31, 2003 and 2002:

(In Thousands)	2003	2002	
Balance at beginning of period	\$ 20,164	\$ 21,479	
Additions	343	445

#### (6) Investments in Real Estate and Joint Ventures

Investments in real estate and joint ventures are summarized as follows:

	Decen	nber 31,	
(In Thousands)	2003	2002	
Gross investments in real estate (a)	\$ 24,383	\$ 23,643	
Accumulated depreciation	(5,463)	(5,673)	
Allowance for losses	(1,436)	(908)	
Investments in real estate	17,484	17,062	
Investments in and interest bearing advances to joint ventures	18,232	16,703	
Note receivable from sale of land	-	125	
Investments in joint ventures	18,232	16,828	_
Total investments in real estate and joint ventures	\$ 35,716	\$ 33,890	
		·	

<sup>(</sup>a) Included \$1.0 million invested in low income housing.

The table set forth below describes the type, location and amount invested in real estate and joint ventures, net of specific valuation allowances of less than \$1 million and general valuation allowances of less than \$1 million, at December 31, 2003:

(In Thousands)	Califorr	nia	Arizona	Total
(III Tribusarius)	Camon	ma	7 11 12 01 1a	iotai

Shopping centers	\$ 8,390	\$ 8,624	\$ 17,014	
Residential (a)	19,244	-	19,244	
Land	188	-	188	
Total real estate before general valuation allowance	\$ 27,822	\$ 8,624	36,446	
General valuation allowance			(730)	
Net investment in real estate and joint ventures			\$ 35,716	

<sup>(</sup>a) Included \$1.0 million invested in low income housing.

### **Notes to Consolidated Financial Statements---(Continued)**

Condensed financial information of joint ventures reported on the equity method is as follows:

Condensed Combined Balance Sheets - Joint Ventures

December 31,

(In Thousands)	2003	2002	
Assets			
Cash	\$ 6,915	\$ 4,071	
Projects under development	37,945	44,170	
Other assets	4,581	574	
	\$ 49,441	\$ 48,815	

### **Liabilities and Equity**

#### Liabilities:

	Notes payable to the Bank	\$ -	\$ 20,742	
	Notes payable to others	22,244	-	
	Other	4,412	9,981	
Equity:				
	DSL Service Company (a)	18,232	16,828	
	Other partners (b)	4,553	1,264	
	Net equity	22,785	18,092	
	- ,	,	,	
		\$ 49,441	\$ 48,815	

<sup>(</sup>a) Included in these amounts are interest-bearing joint venture advances with priority interest payments from joint ventures to DSL Service Company.

### Condensed Combined Statements of Operations - Joint Ventures

(In Thousands)	2003	2002	2001	
Real estate sales:				
Sales	\$ 52,495	\$ 38,520	\$ 1,009	
Cost of sales	(44,519)	(26,758)	(333)	
Net gains on sales	7,976	11,762	676	
Rental operations:				
Rental income	-	182	2,741	
Operating expenses	(84)	(239)	(363)	
Interest, depreciation and other expenses	9	(2,056)	(2,165)	
Net income (loss) on rental operations	(75 )	(2,113)	213	
Net income	7,901	9,649	889	
Less other partners share of net income	3,522	4,173	153	
OSL Service Company s share of net ncome	4,379	5,476	736	
Provision for losses provided by DSL Service Company	-	-	-	

<sup>(</sup>b) The aggregate other partners equity of \$5 million and \$1 million at December 31, 2003 and 2002, respectively, represents their equity interest in the accumulated retained earnings of the respective joint ventures. Those results include the net profit on sales and the operating results of the real estate assets, net of depreciation and funding costs. Except for any secured financing which has been obtained, DSL Service Company has provided all other financing. As part of Downey s internal asset review process, the fair value of the joint venture real estate assets is compared to the secured notes payable to the Bank and others and DSL Service Company s investment. To the extent the fair value of the real estate assets is less than the aggregate of those amounts, a provision is made to create a valuation allowance. No valuation allowances were required at both December 31, 2003 and 2002.

DSL Service Company s share of net income	\$ 4,379	\$ 5,476	\$ 736

### Notes to Consolidated Financial Statements---(Continued)

#### (9) Federal Home Loan Bank Stock

The Bank s required investment in FHLB stock, based on December 31, 2003 financial data, was \$106 million. The investment in FHLB stock amounted to \$123 million and \$118 million at December 31, 2003 and 2002, respectively. A new capital plan of the FHLB was approved by the Federal Housing Finance Board and will be implemented on April 1, 2004. Each member is required to own stock in an amount equal to the greater of 1% of membership asset value or 4.7% of FHLB advances. Based on December 31, 2003 financial data, the required investment in FHLB stock under the new capital plan would be \$100 million, which Downey exceeds and could be required to sell back the excess to the FHLB of San Francisco at their discretion.

### (10) Investment in Downey Financial Capital Trust I

Downey owns all of the issued and outstanding common securities of Downey Financial Capital Trust I ("Trust") totaling \$4 million. The Trust was established by Downey for the purpose of issuing capital securities and using the net proceeds from the sale to make investments in the Bank and for other general corporate purposes. For information regarding the Trust, see Note 17.

### (11) Mortgage Servicing Rights

The following table summarizes the activity in mortgage servicing rights and its related allowance for the years indicated and other related financial data:

(Dollars in Thousands)	2003	2002	2001	
Gross balance at beginning of period	\$ 90,584	\$ 65,630	\$ 46,214	
Additions	61,110	53,236	44,391	
Amortization	(24,774)	(14,435)	(9,813)	
Sales	-	(1,354)	(7,826)	
Impairment write-down	(31,737)	(12,493)	(7,336)	
Gross balance at end of period	95,183	90,584	65,630	
	32,855	8,735	5,483	

Allowance balance at beginning of period				
Provision for impairment	11,890	36,613	10,588	
Impairment write-down	(31,737)	(12,493)	(7,336)	
Allowance balance at end of period	13,008	32,855	8,735	
Total mortgage servicing rights, net	\$ 82,175	\$ 57,729	\$ 56,895	
As a percentage of associated mortgage loans	0.89 %	0.72 %	1.06 %	
Estimated fair value (a)	82,314	57,736	58,047	
Weighted average expected life (in months)	59	43	82	
Custodial account earnings rate	1.65 %	1.61 %	4.36 %	
Weighted average discount rate	8.95	8.35	9.16	
At period end				
Mortgage loans serviced for others:				
Total	\$ 9,313,948	\$ 8,316,236	\$ 5,805,811	
With capitalized mortgage servicing rights: (a)				
Amount	9,268,308	8,036,393	5,379,513	
Weighted average interest rate	5.79 %	6.51 %	6.97 %	
Custodial account balances	\$ 232,562	\$ 378,560	\$ 192,067	

<sup>(</sup>a) The estimated fair value may exceed book value for certain asset strata and excluded loans sold or securitized prior to 1996 and loans temporarily sub-serviced without capitalized mortgage servicing rights.

Page 88 <u>Navigation Links</u>

Downey Financial Corp. And Subsidiaries

#### Notes to Consolidated Financial Statements---(Continued)

Key assumptions, which vary due to changes in market interest rates and are used to determine the fair value of mortgage servicing rights, include: expected prepayment speeds, which impact the average life of the portfolio; the earnings rate on custodial accounts, which impact the value of custodial accounts; and the discount rate used in valuing future cash flows. The following table summarizes the estimated changes in the fair value of mortgage servicing rights for changes in those assumptions individually and in combination associated with an immediate 100 basis point increase or decrease in market rates. Also summarized is the earnings impact associated with provisions for or reductions of the valuation allowance for mortgage servicing rights. Impairment is measured on a disaggregated basis based upon the predominant risk characteristics of the underlying mortgage loans such as term and interest rate. Certain stratum may have impairment, while other stratum may not. Therefore, changes in overall fair value may not equal provisions for or reductions of the valuation allowance.

The sensitivity analysis in the table below is hypothetical and should be used with caution. As the figures indicate, changes in fair value based on a 100 basis point variation in assumptions generally cannot be easily extrapolated because the relationship of the change in the assumptions to the change in fair value may not be linear. Also, in this table, the effect that a change in a particular assumption may have on the fair value is calculated without changing any other

assumptions. In reality, changes in one factor may result in changes in another, which might magnify or counteract the sensitivities.

(Dollars in Thousands)	Expected Prepayment Speeds	Custodial Accounts Rate	Discount Rate	Combination	
Increase rates 100 basis points: (a)					
Increase (decrease) in fair value	\$ 22,917	\$ 4,987	\$ (1,671)	\$ 22,209	
Reduction of (increase in) valuation allowance	12,157	3,359	(2,474)	12,190	
Decrease rates 100 basis points: (b)					
Increase (decrease) in fair value	(42,006)	(4,554)	2,203	(45,919)	
Reduction of (increase in) valuation allowance	(41,867)	(4,415)	2,301	(45,779)	

<sup>(</sup>a) The weighted-average expected life of the mortgage servicing rights portfolio is 82 months.

The following table presents a breakdown of the components of loan servicing income (loss) included in Downey s results of operations for the years indicated:

(In Thousands)	2003	2002	2001		
Net cash servicing fees	\$ 21,215	\$ 16,536	\$ 11,702		
Payoff and curtailment interest cost (a)	(11,611)	(5,117)	(2,674)		
Amortization of MSRs	(24,774)	(14,435)	(9,813)		
Provision for impairment of MSRs	(11,890)	(36,613)	(10,588)		
Total loan servicing loss, net	\$ (27,060)	\$ (39,629)	\$ (11,373)		

<sup>(</sup>a) Represents contractual obligation to pay interest at the investor s rate from the date the loan is repaid until the funds are remitted to the investor. This does not include the benefit of the use of repaid loan funds to reduce borrowings and its associated interest expense, which is reported in net interest income.
