Forward Looking Statements

- o Some of the statements contained in these presentations that are not historical facts are statements of future expectations and other forward-looking statements (within the meaning of Section 27A of the Securities Act of 1933 or Section 21E of the Securities Exchange Act of 1934, each as amended) that are based on management's current views and assumptions, and are conditioned upon and also involve known and unknown risks and uncertainties that could cause actual results, performance or events to differ materially from those in such statements due to, among other factors:
 - o Significant changes in demand in the key application markets and from key customers served by our products make it extremely difficult to accurately forecast and plan our future business activities. In particular, following a period of significant order cancellations, we recently experienced a strong surge in customer demand, which has led to capacity constraints in certain applications;
 - o our ability to utilize and operate our manufacturing facilities at sufficient levels to cover fixed operating costs in periods of reduced customer demand, as well as our ability to ramp up production efficiently and rapidly to respond to increased customer demand, and the financial impact of obsolete or excess inventories if actual demand differs from our expectations;
 - o our ability to successfully integrate the acquisitions we pursue, in particular the successful integration and operation of the ST-Ericsson joint venture;
 - o ST-Ericsson is a new wireless joint venture, representing a significant investment and risk for our business. The joint venture is currently engaged in restructuring initiatives and further declines in the wireless market, as well as the inability of ST-Ericsson to complete its ongoing restructuring plans or to successfully compete, could result in additional significant impairment and restructuring charges;
 - o we currently hold a significant financial investment in Micron Technology Inc ("Micron") as a result of the previously announced sale to Micron of our equity investment in Numonyx in an all-stock transaction. Our shares in Micron are subject to certain resale restrictions and, consequently, there is no guaranty as to when we will be able to sell them and at what price;
 - o our ability to compete in our industry since a high percentage of our costs are fixed and are incurred in currencies other than U.S. dollars, especially in light of the volatility in the foreign exchange markets and, more particularly, in the U.S. dollar exchange rate as compared to the other major currencies we use for our operations;
 - o the outcome of ongoing litigation as well as any new litigation to which we may become a defendant;
 - o changes in our overall tax position as a result of changes in tax laws or the outcome of tax audits, and our ability to accurately estimate

Edgar Filing: STMICROELECTRONICS NV - Form 6-K

tax credits, benefits, deductions and provisions and to realize deferred tax assets;

- o the impact of intellectual property ("IP") claims by our competitors or other third parties, and our ability to obtain required licenses on reasonable terms and conditions;
 - o our ability to execute our restructuring initiatives in accordance with our plans if unforeseen events require adjustments or delays in implementation or require new plans;
 - o our ability in an intensively competitive environment to secure customer acceptance and to achieve our pricing expectations for high volume supplies of new high-products in whose development we have been, or are currently, investing;
 - o changes in the political, social or economic environment, including as a result of military conflict, social unrest and/or terrorist activities, economic turmoil, as well as natural events such as severe weather, health risks, epidemics, earthquakes, volcano eruptions or other acts of nature in, or affecting, the countries in which we, our key customers or our suppliers, operate.
- o Such forward-looking statements are subject to various risks and uncertainties, which may cause actual results and performance of our business to differ materially and adversely from the forward-looking statements. Certain forward-looking statements can be identified by the use of forward-looking terminology, such as "believes," "expects," "may," "are expected to," "should," "would be," "seeks" or "anticipates" or similar expressions or the negative thereof or other variations thereof or comparable terminology, or by discussions of strategy, plans or intentions. Some of these risk factors are set forth and are discussed in more detail in "Item 3. Key Information-- Risk Factors" included in our Annual Report on Form 20-F for the year ended December 31, 2009, as filed with the SEC on March 10, 2010. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in this release as anticipated, believed or expected. We do not intend, and do not assume any obligation, to update any industry information or forward-looking statements set forth in this release to reflect subsequent events or circumstances.
-

Company Strategy & Vision
Carlo Bozotti
President and Chief Executive Officer

ST Business & Operations
Alain Dutheil
Chief Operating Officer

A Year-Ago...The Global Recession

- o Semiconductor bookings dropped rapidly in Q408; demand remained weak in first half of 2009
 - o Impact on industry's revenue evolution greater than initially expected
 - o Industry utilization rates reached unprecedented low levels; capacity cut to react to lack of demand
 - o Inventory levels were substantially reduced
 - o Economic impact varied by geography
 - o China - started to recover
 - o Europe, US and Japan - still difficult conditions
 - o Global market bottomed in mid-2009
-

Managed Well Through the Downturn...

- o ST exited the recession a stronger and leaner company
- o Increased operating leverage
- o Completed ~\$750M of cost savings initiatives in 2009
- o Improved financial strength and stability
- o Over \$2.76B in gross cash and marketable securities exiting March 2010
- o Continued progress in advanced technology R&D partnerships
- o Reshaped manufacturing
- o Committed to the ongoing integration of ST-Ericsson
- o Performance of ST's global team
- o Reacted quickly to align manufacturing, costs and working capital to end markets
- o Stayed focused on customers

2009 Semiconductor Industry Revenue

TAM: -9%

SAM: -13%

ST (ex FMG): -10.8%

Today's Priorities

- o Resuming progress towards long-term financial goals
- o Focused on reaching sustainable levels of sales and net income
- o Organic growth / new product innovation
- o Disciplined portfolio management
- o Leveraging global scale and scope
- o Commitment to shareholder value creation
- o ST-Ericsson
- o Competitive cost structure / completion of announced restructuring programs
- o New portfolio
- o Preparing the company for future, profitable growth

Current Expectations

2010 Semiconductor Industry Revenue

Market Mega-Trends

- o Multimedia convergence is accelerating
 - o Re-rating of industry growth
 - o Semiconductor market is moving East
 - o Cost of fabs and process R&D are soaring
 - o Foundries are getting a significant share of semi business
 - o R&D is shifting across the value chain
 - o Industry is consolidating by application
 - o Pervasion into new high-growth industries
-

Edgar Filing: STMICROELECTRONICS NV - Form 6-K

Micron acquired Numonyx Holdings B.V. in consideration for 140M shares of Micron common stock, including assumed management's stock plan

- o Deal closed on May 7, 2010
- o In connection with the sale of its 48.6% stake in Numonyx, ST has received:
- o 66.88M shares of Micron common stock
- o They will be dealt as a financial investment

Numonyx Deal*

Transaction

Consideration

for ST y

- o At May 6, 2010 Micron's share price of \$ 8.75, the value of the shares is \$585.2M
- o A substantial portion of such shares is hedged
- o In connection a payable of \$77.8M is due by ST to Francisco Partners
- o future full ownership of the Numonyx M6 facility in Catania, Italy,
- o ST has committed to contribute it to the new photovoltaic joint initiative owned 33% by ST; valued 60M (euro)
- o Total consideration, net of the payable, of \$580M
- o Eliminated the risk of \$225M related to the ST's guarantee to a Numonyx loan, which has been repaid in full at closing

Financial

i tt ST

- o Opportunity to accelerate the recovery of \$250M of restricted cash, due to the earlier redemption of the Hynix-Numonyx deposit

* Based on Micron's trading price of \$8.75 per share on May 6, 2010.

8

impact to o \$800M to over \$1B improvement of ST's capital structure

Appendix

- o Net operating cash flow is defined as net cash from operating activities minus net cash used in investing activities, excluding payment for purchases of and proceeds from the sale of marketable securities (both current and non-current), short-term deposits and restricted cash. We believe net operating cash flow provides useful information for investors and management because it measures our capacity to generate cash from our operating and investing activities to sustain our operating activities. Net operating cash flow is a U.S. GAAP measure and does not represent total cash flow since it does not include the cash flows generated by or used in financing activities. In addition, our definition of net operating cash flow may differ from definitions used by other companies.
- o Net financial position: resources (debt), represents the balance between our total financial resources and our total financial debt. Our total financial resources include cash and cash equivalents current and non current marketable securities short-term deposits and restricted cash, and our total financial debt include bank overdrafts, the current portion of long-term debt and long-term debt, as represented in our consolidated balance sheet. We believe our net financial position provides useful information for investors because it gives evidence of our global position either in terms of net indebtedness or net cash by measuring our capital resources based on cash, cash equivalents and marketable securities and the total level of our financial indebtedness. Net financial position is not a U.S. GAAP measure.
- o Adjusted Net Earnings is a non-GAAP measure and is used by the Company's management to help enhance an understanding of ongoing operations and to communicate the impact of the excluded items. Non-GAAP earnings excludes impairment restructuring charges and other related closure costs attributable to Parent Company's shareholders, the impact of purchase accounting (such as in-process R&D costs and inventory setup charges), other-than-temporary impairment charges on financial assets and impairment related to equity investments, net of the relevant tax impact.
- o Financial Model: Presented at May 2009 Analyst Day
- o Key Information on Consolidation / Deconsolidation:
 - o ST completed the deconsolidation of its Flash Memory Group (FMG) segment and took an equity interest in Numonyx on March 30, 2008, which is reported under the equity method of valuation with a one quarter lag in reporting.
 - o ST-NXP Wireless, a joint venture initially owned 80% by ST, began operations on August 2, 2008 and was fully consolidated into ST's operating results. On February 1, 2009 and prior to the closing of the merger of ST-NXP Wireless Ericsson Mobile Platforms to create ST-Ericsson, ST exercised its option to buy out NXP's 20% ownership stake of ST-NXP Wireless.
 - o ST-Ericsson, a joint venture owned 50% by ST, began operations on February 3, 2009 and is consolidated into ST's operating results as of that date. ST-Ericsson is led by a development and marketing company and is consolidated by ST. A separate platform design company providing platform designs mostly to the development and marketing company is accounted for by ST using the equity method.
 - o Wireless Segment: As of February 3, 2009, "Wireless" includes the portion of sales and operating results of the 50/50 ST-Ericsson joint venture as consolidated in the Company's revenues and operating results, as well as other items affecting operating results related to the wireless business.
 - o Sales recorded by ST-Ericsson and consolidated by ST are included in Telecom and Distribution

Sustainable Technology &
Leadership
Jean-Marc Chery
Chief Technology Officer

Introduction

Technology is bringing a competitive advantage to ST in the field of multimedia convergence and power applications

- o R&D leadership & technology segmentation

- o R&D value chain breakdown & management

- o Technology programs status & roadmap

- o Summary

2

Technology R&D Leadership Brings:

- o Fast Time to Market
- o First device tape out
- o Device volume and yield ramp up
- o Innovation
- o Performance, power, area scaling
- o Cost of ownership, design simplicity
- o Supply Chain Multi Sourcing
- o Time to market first source
- o Second / alternative source

o Advanced R&D pre T0

5

Value Chain Management: Innovation

- o Process flow

- o Device architecture

...creates the difference on device ideal balanced performance vs. applications

- o Leverages best-in-class innovation vs.

T t d d t

Distributed, Cooperative R&D

6

- o Targeted products

- o Critical decision factors

- o Technologies

- o Mitigates risk of choice

- o Shares expenses

Value Chain Management: Operations

Concurrent ISDA engineering enables best-in-class and lean development techniques for:

- o Better silicon proven solution and lower cost
- o Manufacturing synchronization for wafer fab

Focused ST cluster on advanced CMOS concentrating activities of industrialization, derivatives/analog development, design platform enables:

- o Fast volume yield learning internal ramp up
- o Multi sourcing enablement
- o Fast learning cycle for time to market
- o Lean capex and opex
- o Technology differentiation
- o Best-in-class technology to design, enablement
- o Efficient design platform

7

Technology Leadership...

o Strengthening core competencies: device architecture, process integration, design enablement

Crolles:

o Low-power device

o RF add-on devices

o Embedded Dram and high performance device

o CMOS imaging sensor

o Photo lithography, TSV and 3D

o Agrate:

o Smart-Power and analog

o Embedded Nvm

o Greater Noida:

o Design enablement

....Enables...

- o Competitive innovation driven by ST's proactive approach and credibility
 - o Global and networked R&D competence centers optimized and managed by ST
 - o ST's commitment to a sustainable innovation expenses-to-sales ratio

The Future is Bright...
Devices architecture (FDSOI, FinFET 3D)
Gate FDSOI=2D FinFET=3D
Photolithography (multiple patterning, extreme UV)
21

3D/Heterogeneous integration: a competitive advantage on the solution cost at same device performance, power leakage and area scaling
Solution cost is driven by process and design complexity
...as Innovation Drives Breakthroughs...

-

- o Communication bandwidth rapidly increasing from few Gb/s to 100Gb/s
- o Copper wire technology not able
- o Optical connections already present in servers/routers rack to rack
- Photonics on Silicon
- 22
- to sustain such data rates
- o Photonics on silicon technology allows die to die and within die optical communication
- CMOS
- wafer
- transistors metal interconnects
- F
- C
- Modulator

....and Aligns ST with Key Trends

Derivatives / Mixed Signal Analog trends:

- o Integration on single chip of digital analog and RF add on devices
- o Flash cell architecture, driving area scaling

Power / Analog trends:

- o Some increase in Logic content but decrease of die area with 160nm/130nm technology nodes
 - o New modules architecture and materials for better power / analog features
-

ST's Technology & Leadership: Summary

- o Enables differentiated / competitive product positioning through:
- o Device integration and device add-on for derivatives / analog
- o Design enablement
- o Specific process modules for best device performance
- o Fast yield learning cycle time techniques
- o Cooperative model allowing leveraged capture of technology innovation and risk mitigation:
- o Leverages: Full multi sourcing supply chain efficiency
- o ST's results and commitment:
- o Demonstrating competitive advantage at 40nm; strengthening it again at 28nm, then offering most advanced platforms for derivatives/analog as well
- o Moving to 20nm and beyond, with increasing complexity and facing the industry's most challenging major architecture, process, and equipment disruptions
- o Continuing to invest in deep knowledge of process, design enablement, manufacturing and their interactions

Trends and Accomplishments in Automotive

Trend:

Innovation driven by social responsibility

- o Emissions, safety, connectivity

Trend: Large emerging markets with

different needs and

requirements

ST Strategy:

Innovate with the leaders ST Strategy:

Fast time to market at

different feature and

cost points

Accomplishments:

- o 32-bit MCU awarded by North

American OEM for a new

global transmission platform

- o Chosen as a supplier of a next

generation powertrain MCU platform

with 55nm embedded flash for a major Tier 1

- o Chosen to provide a full IC portfolio for Asia

airbag platform of major European Tier 1

Accomplishments:

8

- o 1st worldwide Li-Ion battery manager IC in a mass production plug-in hybrid vehicle

- o Selected to develop a new radar baseband IC for adaptive cruise control for a US Tier 1

- o MCU award by the fastest growing Chinese carmaker for all powertrain

- o Steady #1 in China, doubling revenue in auto electronics every year from 2006 to 2011

- o Gained 100% share of car radio tuner for two major Japanese Tier 1s for China

Innovation is Still IMS Key Driver

System Innovation

Complete reference designs
(Hardware & Software) for
medium and small accounts

Our System Approach

- o More than 550 reference
designs available to
support our worldwide
design-in activity

13

- o Innovative new product definition
thanks to feedback from customer
system know-how

System Innovation in Energy

- o Hybrid Electric Traction
- o Motor drivers
- o Power conversion
- o Battery-cell management
- o Fast battery charger
- o Photovoltaic panel converters
- o SmartGrid

14

- o Smart energy metering
 - o Smart appliance plug
 - o Power-line modem
-

System Innovation in Automation

- o Home automation through advanced wired (200 Mbit/s) and wireless connectivity
- o Application Specific Integrated Modules (ASIMs) for robotics and industrial automation
- o Sensor networks for building automation

ASIM

Embedded motor drive module, remotely controlled by ethernet

15

- o Low-power energy harvesting and storage

Flexible rechargeable battery

System Innovation in Healthcare
o Remote patient monitoring
o Blood pressure

TAM 2010: 83M units

CAGR 2010-2013: 11%

Target application:

- o Echographs with color and 3D

Integration

- o Focus on high-margin segments (energy, automation, healthcare)
 - o System approach to deliver complete solutions to the market
 - o Boost high-performance, high-margin analog products leveraging on our IMS Strategy
- strong position in MEMS and power management
- o Pervade the market with microcontrollers and secure access products based on ARM core leveraging on:
 - o Ultra-low-power technologies for portable and healthcare applications
 - o Complete set of analog peripherals including wireless connectivity
 - o Maintain our leadership in power discrete supporting:
 - o High-volume and cash-generating products
 - o New high-margin products utilizing new materials (SiC and GaN)
 - o Improve profitability towards high teens operating margin by the end of 2010 and above 20% in the mid-term
-

North America Economic Environment

US Trade Deficit

- o Deficit growth is validating the evidence of recovery from the worst global recession since World War II
- o US exports grew faster than imports in 2010 despite a stronger \$ vs. (euro) driven by industrial supply, farm products, semiconductors and strong expansion in China

US Imports

- o Impacted by lower crude oil prices

US Unemployment

- o Rose to 9.9% in April from 9.7% in March

ST Americas end-of-quarter BiBA:

doubled from Q1 2009 to Q1 2010

STMicroelectronics Announces 32nm Design Platform for Next-Generation System-on-Chip ICs for Networking Applications

Geneva, May 25, 2010 - STMicroelectronics (NYSE: STM), a world leader in high-performance System-on-Chip (SoC) ICs, today announced full availability of a 32-nanometer (nm) technology platform for the design and development of leading-edge application-specific integrated circuits (ASICs) for networking applications. Central to the new 32nm SoC design platform, which implements ST's 32LPH (Low-Power High-performance) process technology, is the industry's first Serializer-Deserializer (SerDes) IP available in 32nm 'bulk' silicon. Enabling very large ASIC designs, greater than 200mm², ST's new 32nm 32LPH ASIC design platform enables an unprecedented mix of high performance, high complexity, low power consumption and reduced silicon real estate per functional block. The platform is designed to accelerate the development of next-generation ST's Next Generation Platform

generation networking ASICs used in high-performance applications such as enterprise switches, routers and servers as well as optical cross-connect and wireless infrastructure applications.

"With the introduction of the 32LPH platform, ST is enabling the next generation of equipment for communication infrastructure applications, which requires highly integrated ASICs that can satisfy the increasing demand in performance, while also meeting extremely challenging power consumption and silicon integration goals," said Riccardo Ferrari, Group Vice President and General Manager of ST's Network and Storage Division. "We are extremely encouraged by the strong interest that customers are demonstrating for this platform, which has already gained key design wins."

ST's SerDes IP, called S12, is a key piece of intellectual property that has already been successfully demonstrated in labs at selected key customers. The S12 IP is vital for the development of ASICs for networking applications and enables chip-to-chip, chip-to-module and backplane communications in networking equipment designs.

"ST is the first silicon supplier to bring a full design platform in a 32nm bulk-silicon process technology to the communication infrastructure market, including a next-generation predictive ASIC top-down design methodology, together with a full set of proven IP blocks such as a SerDes and embedded DRAM, successfully developed over many years by ST in previous technology nodes," said Philippe Magarshack, Technology & IP R&D Group Vice-President, Central CAD & Design Solutions GM, STMicroelectronics. "ST's Technology R&D center in Crolles, France, has been instrumental in accelerating the completion of the 32LPH platform where low-power technology meets the high-performance requirements of networking applications, while still enjoying all the cost benefits of high-volume manufacturing. In addition, we have partnered with selected EDA vendors to offer networking customers the benefits of a predictable ASIC turnaround time, including fast virtual physical prototyping, and 32nm-class timing, signal and power integrity sign-off."

The first ASIC prototypes implemented in ST's 32LPH process technology are expected early in 2011 production ramp-up in the second half of 2011.

Further Technical Information

ST's 32LPH (Low-Power High-performance) design platform for networking applications supports up to 10 metallization layers to increase routing efficiency. The platform is based on the 32nm High-K Metal Gate process developed within the framework of the ISD alliance, but also incorporates specific IP and devices from ST, such as embedded DRAM with 10-Mbit per square millimeter density and Ternary Content Addressable Memory (TCAM).

STMicroelectronics Expands its SPEAr(R) Microprocessor Family for High-Performance Applications
New advanced symmetrical multiprocessor architecture from ST delivers cost efficiency, computing, and customizability for multiple embedded applications
Geneva, May 27, 2010 - STMicroelectronics (NYSE: STM), a world leader in system-on-chip technology today revealed the new architecture that will be the backbone for the new members of its popular SPEAr(R) (Structured Processor Enhanced Architecture) family of embedded microprocessors, targeting high-performance connectivity and embedded applications.

Leveraging its experience of the production-proven SPEAr300 and SPEAr600 lines, the new SPEAr1300 product line couples powerful dual ARM Cortex-A9 processors with a DDR3 memory interface and is manufactured in ST's low-power 55nm HCMOS (high-speed CMOS) process technology. The dual ARM Cortex-A9 processors support fully symmetrical operation, at speeds up to 600MHz/core for 3000 DMIPS equivalent.

Expansion of SPEAr Family

The SPEAr1300 makes use of ST's innovative Network-on-Chip technology for internal peripheral interconnect, assuring support for multiple different traffic profiles, while maximizing data throughput in the most cost-effective and power-efficient way. Initial sampling has already started to early adopters.

The new architecture offers industry-leading performance in terms of DMIPS/MHz and power consumption/DMIPS ratios, in addition to cost efficiency and customizability advantages. The availability of integrated DDR3 memory controller and a full set of connectivity peripherals like PCIe, SATA, USB and Ethernet, among other features, make the SPEAr1300 the ideal choice for high-performance applications including networking, thin client, videoconferencing, NAS (Network-Attached Storage), computer peripherals, and factory automation.

"This new architecture for the SPEAr family builds upon the unrivalled low power and multiprocessor capabilities of the ARM Cortex-A9 processor core" said Loris Valenti, General Manager of ST's Computer Systems SoC Division. "Upcoming SPEAr embedded microprocessors will deliver an unprecedented combination of processing performance, memory throughput, flexibility and low power for next-generation connectivity appliances."

Key features of the new SPEAr1300 architecture include:

- o Dual ARM Cortex-A9 cores, running at 600MHz for 3000 DMIPS equivalent
- o 64-bit AXI (AMBA3) bus Network-on-Chip technology
- o DRAM and L2 cache with Error Correction Code (ECC)
- o 533MHz 32-bit DDR3 memory controllers with ECC; 16-bit DDR2 also supported
- o Accelerator coherence port
- o Gigabit Ethernet
- o PCIe 2.0 supporting 5 GT/s (Gigatransfers/second)
- o SATA II 3 Gbit/s
- o USB 2.0
- o 256-bit key hardware encryption/decryption
- o 1.3 million gates of configurable logic

Embedded microprocessors from the new SPEAr1300 product line will be announced over the next few months, expanding ST's SPEAr family and providing an extensive choice for leading customers.

Further information on ST's SPEAr family of embedded microprocessor System-on-Chip ICs is available at www.st.com/spear

Key Takeaways

- o CCI product group is delivering solid results
- o Revenues in excess of \$1B
- o Operating margin in the low double-digit range
- o CCI product strategy centered on traditional ASIC, flexible ASIC and eMPU
- o Strategy to grow in Analog
- o Continue to be a market leader in motor controllers for HDD and printers, and in printheads for inkjet printers
- o Now accelerating BiCmos ASICs for both active optical cables and RF interfaces
- o Strategy to grow in Digital
- o Significant design wins in the areas of communication infrastructure and printers
- o Launch of the first 32nm bulk platform for networking applications
- o Expansion of the SPEAr family with the launch of the 1300 series
- o Tactical participation in HDD SOC

o Rapidly increasing service choices accessible by users requires increased security flexibility without compromise on robustness

ST's Strength in CA & Security

- o Long-time partnerships with leading security vendors and more
 - o Mastering security from end-to-end
 - o Security technology developed internally allows for faster adaptation as security evolves
 - o Full support for smartcard and internal CA
 - o Late security customization in manufacturing flow
 - o Delivery flexibility and reduced inventory
- 13
-

Audio & Image Quality Enhancement

- o Leveraging years of excellence
- o Internet-driven content requires extensive video processing to meet customer's quality expectations
- o Sound terminal for high quality low cost speakers

14

ST is Ready for 3DTV

- o Deployable now!
 - o Side-by-side support (SbS)
 - o Top-and-bottom support (TaB) L

16

Summary

- o ST has an established position in the home entertainment market
- o OEM, Ecosystem familiar with ST
- o Proven solutions
- o ST provides complete solutions for a wide range of consumer services:
- o STB, DTV and other CE devices
- o Unmatched user experience, services and energy-efficiency
- o ST deploys new technologies for home entertainment to grow revenue
- o 3D video, 3D graphics, image quality, ...
- o Compelling internet convergence
- o Casual and full gaming ...
- o ST helps build greener products

Router

ST23YR for Contactless Solutions

- o ST23YR designed for advanced security and highspeed contactless solutions

- o ST23YR80:

biometric passport transaction (3 seconds

- o ST23YR18:

EMV Paypass DDA transaction (300ms

24

- o ST23ZR08:

secure transport solution

AuKey Solution for Brand Protection

- o Turnkey solution based on highly secure operating system running on ST23 platform
- o AuKey to authenticate securely:
- o Printer cartridges
- o Game peripherals
- o Docking station
- o Network accessories

25

Dual Interface Serial EEPROM

- o Application parameters are accessible from the inside (I(2)C) & the outside (RF) of electronic equipment

P i (ISO15693) R F i t f

M24LR64

- o Passive interface

I(2)C interface EEPROM RF interface o 32-bit password protection

Parameters such as settings, traceability, maintenance logs, firmware... can be read and updated:

- o Anywhere in the supply chain

- o At no on-board power cost

26

p

- o During the entire product lifetime (manufacturing, shipping, maintenance ...)

- o Even when the device is turned off or in its shipping box

Allows extra flexibility for supply chain management

Conclusion

Microcontrollers Opportunities

- o General purpose microcontrollers market
 - o Very large and well established market
 - o Market migration to 32-bit well synchronized with STM32 platform introduction
 - o Early success of the STM32 ramp-up
 - o New business opportunities allow for increased market share
 - o Secure microcontrollers
 - o Electronics market moving to digital
 - o Early success of ST23 & ST33 ramp-up
