The Issuer intends to use \$80 million of the net proceeds from the offering of the notes to repay in full its second lien term loan and to repay all amounts outstanding under its senior credit facility (\$5.0 million as of September 18, 2009). The remainder of the net proceeds will be used for general corporate purposes, including the possible retirement of other indebtedness. Amounts repaid under the Issuer's senior credit facility may be reborrowed.

The exact stock prices and effective dates may not be set forth in the table above, in which case

If the stock price is between two stock price amounts in the table or the effective date is between two effective dates in the table, the number of additional shares will be determined by a straight-line interpolation between the number of additional shares set forth for the higher and lower stock price amounts and the two dates, as applicable, based on a 365-day year.

If the stock price is greater than \$150.00 per share (subject to adjustment), no additional shares will be added to the conversion rate.

If the stock price is less than \$26.66 per share (subject to adjustment), no additional shares will be added to the conversion rate.

Notwithstanding the foregoing, the conversion rate shall not exceed 37.5093 per \$1,000 principal amount of notes on account of adjustments described in the Preliminary Prospectus Supplement under Description of notes Conversion rights Conversion rate adjustments Adjustment to shares delivered upon conversion upon make-whole fundamental change, and subject to the adjustments set forth in clauses (1) through (5) of Description of notes Conversion rights Conversion rate adjustments in the Preliminary Prospectus Supplement.

Supplemental *pro forma* ratio of earnings to fixed charges:

After giving effect to the offering of the notes and the application of \$80 million of the net proceeds from the offering of the notes to repay in full the Issuer's second lien term loan and to repay amounts outstanding under its senior credit facility, the ratio of earnings to fixed charges would have been 6.0x for the year ended December 31, 2008. In addition, earnings for the six months ended June 30, 2009 were inadequate to cover fixed charges. After giving effect to the offering of the notes and the application of \$80 million of the net proceeds from the offering of the notes to repay in full the Issuer's second lien term loan and to repay all amounts outstanding under its senior credit facility, the coverage deficiency for the six months ended June 30, 2009 would have been \$57.8 million.

Ranking:

The notes will be the Issuer's senior unsecured obligations and will rank equally in right of payment to all of its other existing and future senior indebtedness. The notes will be effectively subordinated to all of the Issuer's secured indebtedness, including indebtedness under its senior credit facility, to the extent of the value of its assets collateralizing such indebtedness and any liabilities of its subsidiary. As of September 18, 2009, and after giving effect to the use of the proceeds from the offering of the notes, the Issuer will have had approximately \$365 million of outstanding senior indebtedness and other liabilities (excluding trade payables, accrued expenses and intercompany liabilities), none of which represented secured indebtedness.

Capitalization:

The following table replaces the table set forth under "Capitalization" on page S-31 of the Preliminary Prospectus Supplement assuming that the underwriters do not exercise their over-allotment option to purchase additional notes:
