Central banks have turned net buyers of gold...¹⁹ Traditionally, central banks have been net sellers of gold. From 2004 to 2009, signatories of CBGA2 could sell 500 tonnes of gold per annum. They undersold substantially. CBGA3 (from Sep 27, 2009 to Sep 26, 2014) lowered the cap to 400 tonnes per annum. Signatories hold 40% (11,960 tonnes) of official sector reserves. Purchases by developing nations made central banks net buyers in Q2 and Q3 2009.

..as Asian central banks accumulate gold²⁰ Asia holds only c. 1.9% of its total reserves in gold. China has expressed concern over the outlook for the US dollar. The region is becoming a more important gold producer. China leads the way, increasing its gold reserves to 1,054 tonnes. Were Asia to increase its gold reserves by 1 percentage point, it would need to buy c. 1,000 tonnes of gold.

Global allocations to gold remain small²¹ Global assets under management as of Q3 2009 (est. total US\$81.5 trillion) Alternatives** Gold 5% 1% Total above ground stocks of gold in private hands = 28,750 tonnes by Q3 2009. Global Equities* 44% Gold holdings as a % of total Global Fixed Income* global assets were less than 1% 50% by Q3 2009.* Estimated using world equity and bond index data and adjusting for data overlaps.** Includes hedge funds, private equity, real estate, and commodities (excluding gold). Source: JPMorgan, Barclays Capital, HFR, GFMS, FTSE/EPRA, BIS

Summary22 Falling mine production and easing recycled gold. Jewelry and industrial demand downturn has likely bottomed out. Central banks have turned from large net sellers to small net buyers. Investment demand remains strong, underpinned by demand for gold as an inflation and dollar hedge Lack of correlation and relatively tame volatility make gold attractive for risk management

Ways to access the gold market are many...²³ Coins Bullion vs. numismatic. Range in size (from 1/20 to 1 oz) and in karatage. Bars Range in size (from 1gr to 1kg) and are usually 995 to 999.9 per 1000 parts gold. Gold accounts available from bullion banks Allocated: specific bars identified by number, hallmark and weight. Unallocated: share in a pool of gold; can be lent out. Over-the-counter products Gold futures and options Comex offers 100 oz gold contracts and 50 oz mini-futures.

...including ETFs²⁴

What are GLD shares? Each share represents an undivided beneficial interest in a Trust. Sole asset of the Trust is gold. Shares are designed to track the price of gold, less Trust expenses. All but a tiny fraction held in allocated account. London Good Delivery 400-oz bars held in HSBC's London vault.

What is the role of the Authorized Participants?²⁶ Trust does not deal directly with individual investors. Investors buy and sell on the New York Stock Exchange. Authorized Participants (APs) are approved broker/dealers. APs have gold accounts with HSBC in London. APs handle creations and redemptions directly with the Trust. Continuous creation and redemption minimize tracking error.

What are the expenses?²⁷ Annual expenses capped at 40 basis points per annum of average daily net asset value. Trust accrues expenses daily, so that all investors bear a fair share. Trust meets expenses by selling a tiny quantity of gold each month. Over time, the quantity of gold backing each share diminishes.

GLD in retirement plans²⁸ GLD shares are eligible for inclusion in retirement plans. Bullion investments are exempt from the collectibles category in retirement accounts provided two conditions are met: minimum purity of 995 parts per thousand. gold must be held by qualified retirement plan trustee. Private letter ruling from IRS confirms suitability of custodial arrangements.
