Soliciting material pursuant to Rule 14a-12 under the Exchange Act (17 CFR 240.14a-12)

Pre-commencement communications pursuant to Rule 14d-2(b) under the Exchange Act (17 CFR 240.14d-2(b))

Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

**Item 7.01 Regulation FD Disclosure**

On July 27, 2010, Antigenics Inc. announced positive results with AG-707, an investigational therapeutic vaccine being developed to treat herpes simplex virus-2 (HSV-2), the virus that causes genital herpes, in infected patients. Developed by Antigenics, the vaccine triggers a cellular immune response, stimulating both CD4<sup>+</sup> and CD8<sup>+</sup> T cells. In this four-arm, phase 1 study, 35 HSV-2 seropositive patients received AG-707+QS-21 Stimulon<sup>®</sup> adjuvant (Antigenics proprietary saponin adjuvant), AG-707 alone, QS-21 alone, or placebo. All patients who were evaluable for immune response and received AG-707 with QS-21 showed a statistically significant CD4<sup>+</sup> T cell response (100%; 7/7) to HSV-2 antigens as detected by IFN $\gamma$  Elispot, and the majority of those patients demonstrated a CD8<sup>+</sup> T cell response (63%; 5/8). This study is the first to demonstrate that heat shock proteins complexed to viral antigens induce an antigen-specific T cell response in humans.

The full text of the press release issued in connection with the announcement is being furnished as Exhibit 99.1 to this current report on Form 8-K.
