[4] Equity used in calculation assumes securities at cost. Minority interest-preferred securities of subsidiary companies (hybrid securities) are considered 50% debt and 50% equity.

Return on Equity/Return on Capital:

In order to accommodate the various perspectives, LNC presents two separate Return on Equity numbers on pages 2, 5 and 6 of this Statistical Report. Net Income Divided by Average Shareholders' Equity tends to fluctuate from period to period due to the realization of gains and losses on investments or sale of subsidiaries. Income from Operations Divided by Average Shareholders' Equity is less volatile but leaves out an important element of earnings for a company that has a long-term goal of enhancing shareholder value by realizing investment gains.

Return on capital measures the effectiveness of LNC's use of its total capital, which is made up of equity, debt and hybrid securities. Return on capital is calculated by dividing income from operations (after adding back after-tax interest expense) by average capital. The difference between return on capital and return on equity presents the effect of leveraging on LNC's consolidated results.
